

# A Conversation on NPDN Diagnostic Confidence Levels and Reporting

The NPDN Diagnostics & National Database Program Area Committees

March 9, 2016 – Arlington, VA

# NPDN data management systems

- ▶ 3 primary data management systems (DDDI, P-Clinic, and PDIS) and several custom systems
- ▶ Select a diagnosis from the national pest list
- ▶ Assign confirmation levels using drop down menus in Genus, Species and Sub Species

## 2015 NPDPN IT/Diagnosticians meeting Revelations:

- Interpretation of confidence level definitions varies among NPDPN diagnosticians
- Few able to locate definitions on the NPDPN website
- Definitions don't apply to all situations encountered by diagnosticians
- Poor understanding of how confidence codes are interpreted by the national repository
- Dissatisfaction with National Repository pest/pathogen mapping data

## Webinar with NPDN Diagnostics PAC and NPDN National Repository PAC

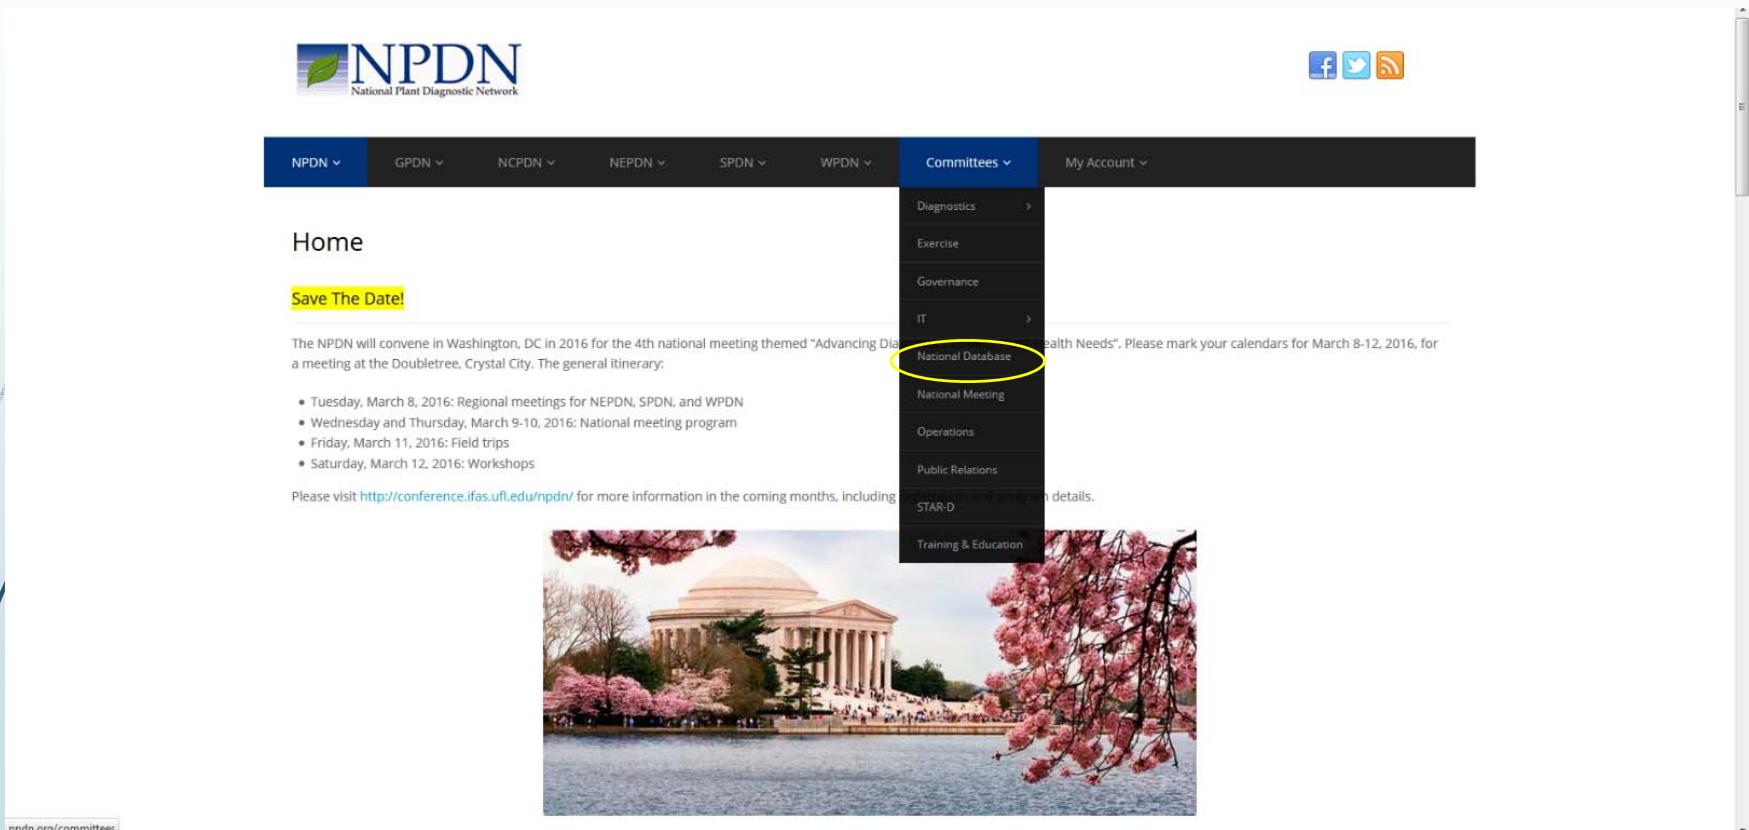

- Invited Matt Bertone (NC State University entomologist) to participate
- Reviewed current confidence level definitions
- Mike Hill explained how confidence levels are interpreted at the National Repository
- An ad-hoc committee was formed to survey the NPDN membership to determine use, understanding, and satisfaction with the current system from assigning confidence levels to using data generated by the national repository.
- 53 members participated in the survey

## What the survey revealed

- ▶ NPDN members need more training/education
- ▶ Guidelines need to be more obvious on the website
- ▶ Improvements to National Data Repository query results

# Guidelines on the NPDN website?

The screenshot shows the NPDN website homepage. The NPDN logo (National Plant Diagnostic Network) is in the top left. Social media icons for Facebook, Twitter, and RSS are in the top right. A navigation bar contains links for NPDN, GPDN, NCPDN, NEPDN, SPDN, WPDN, Committees, and My Account. The 'Committees' dropdown menu is open, listing: Diagnostics, Exercise, Governance, IT, National Database (highlighted with a yellow circle), National Meeting, Operations, Public Relations, STAR-D, and Training & Education.

**Home**

**Save The Date!**

The NPDN will convene in Washington, DC in 2016 for the 4th national meeting themed "Advancing Diagnostics and Plant Health Needs". Please mark your calendars for March 8-12, 2016, for a meeting at the Doubletree, Crystal City. The general itinerary:

- Tuesday, March 8, 2016: Regional meetings for NEPDN, SPDN, and WPDN
- Wednesday and Thursday, March 9-10, 2016: National meeting program
- Friday, March 11, 2016: Field trips
- Saturday, March 12, 2016: Workshops

Please visit <http://conference.ifas.ufl.edu/npdn/> for more information in the coming months, including details.

# NPDN Confidence Levels

- **Confirmed** The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the **confirmation** of the organism to Genus, species and/or race or pathovar level.
- **Not Detected** The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.
- **Suspected** Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations can not be made. This term may also be used with abiotic entries.
- **Inconclusive** Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

# National Repository

When there is no species (species ID is sp./spp.) then the confirmation level assigned to the diagnosis is what was reported at the genus level.

Pest Genus	Genus Confidence	Pest Species	Species Confidence	Overall Confidence	Comments
Phytophthora	Confirmed	sp./spp.	Confirmed	Confirmed	When species is sp./spp.
Phytophthora	Suspected	sp./spp.	Confirmed	Suspected	When species is sp./spp. confirmation only reported to genus level!
Phytophthora	Not Detected	sp./spp.	Confirmed	Not Detected	When species is sp./spp. confirmation only reported to genus level!
Phytophthora	Inconclusive	sp./spp.	Confirmed	Inconclusive	When species is sp./spp. confirmation only reported to genus level!
Phytophthora	Not Detected	ramorum	Confirmed	Not Detected	If genus is "Not Detected" t
Phytophthora	Not Detected	ramorum	Suspected	Not Detected	If genus is "Not Detected" t
Phytophthora	Not Detected	ramorum	Not Detected	Not Detected	If genus is "Not Detected" t
Phytophthora	Not Detected	ramorum	Inconclusive	Not Detected	If genus is "Not Detected" t
Phytophthora	Confirmed	ramorum	Confirmed	Confirmed	Report to lowest level (species, sub-species if populated)
Phytophthora	Confirmed	ramorum	Suspected	Suspected	Report to lowest level (species, sub-species if populated)
Phytophthora	Confirmed	ramorum	Not Detected	Not Detected	Report to lowest level (species, sub-species if populated)
Phytophthora	Confirmed	ramorum	Inconclusive	Inconclusive	Report to lowest level (species, sub-species if populated)

When confirmation levels are assigned to both genus and species, then the diagnosis is reported at the lowest confirmation level assigned.

# What if the identification is only to family or order?

- ▶ The Diagnosis/ID will be *LatinFamily*
- ▶ Confirmation level for Family or Order is accomplished by selecting a level for the Genus field.

**Add New Diagnosis/ID**  
Enter detailed information for Diagnosis/ID for Sample Number 201600002

Diagnosis/ID Information

**Note:** For "sp./spp." Diagnosis/ID, the species/subspecies confidence level is set to "Inconclusive". Diagnosticians are not required to choose the species/subspecies confidence levels for the above case.

# Suggestions from the Diagnostics and National Repository PACs

- ▶ Diagnostician's Toolbox
  - ▶ Make available on the NPDN Member's only homepage
- ▶ Contents
  - ▶ Upload guidelines
  - ▶ Training resources
- ▶ Challenge
  - ▶ Volunteers to develop training resources

# Suggestions from the Diagnostics and National Repository PACs

- Confusion over assigning confidence level to Family/Order
  - Education
  - Instructions that appear when cursor is hovered over Genus box during data entry
- Improvements to National Repository query system (all raw diagnostic data is in the system)

Pest Genus	Genus Confidence	Pest Species	Species Confidence	Overall Confidence	Comments
Phytophthora	Confirmed	sp./spp.	Confirmed	Confirmed	When species is sp./spp. confirmation only reported to genus level!
Phytophthora	Suspected	sp./spp.	Confirmed	Suspected	When species is sp./spp. confirmation only reported to genus level!
Phytophthora	Not Detected	sp./spp.	Confirmed	Not Detected	When species is sp./spp. confirmation only reported to genus level!
Phytophthora	Inconclusive	sp./spp.	Confirmed	Inconclusive	When species is sp./spp. confirmation only reported to genus level!
Phytophthora	Not Detected	ramorum	Confirmed	Not Detected	If genus is "Not Detected" then overall confirmation is "Not Detected"
Phytophthora	Not Detected	ramorum	Suspected	Not Detected	If genus is "Not Detected" then overall confirmation is "Not Detected"
Phytophthora	Not Detected	ramorum	Not Detected	Not Detected	If genus is "Not Detected" then overall confirmation is "Not Detected"
Phytophthora	Not Detected	ramorum	Inconclusive	Not Detected	If genus is "Not Detected" then overall confirmation is "Not Detected"
Phytophthora	Confirmed	ramorum	Confirmed	Confirmed	Report to lowest level (species, sub-species if populated)
Phytophthora	Confirmed	ramorum	Suspected	Suspected	Report to lowest level (species, sub-species if populated)
Phytophthora	Confirmed	ramorum	Not Detected	Not Detected	Report to lowest level (species, sub-species if populated)
Phytophthora	Confirmed	ramorum	Inconclusive	Inconclusive	Report to lowest level (species, sub-species if populated)

# Changes?

- The current definition focuses only on test results.
- What about abiotic issues when there isn't enough information to warrant a confirmation level of Suspected?

## Inconclusive

Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

# Undetermined

- ▶ Education?
- ▶ Create a new definition?
  - ▶ When NPDN started there were 6 confidence level definitions, including Undetermined. Currently there are 4 definitions – Undetermined is not one of them.

## NPDN Confidence Levels

- **Confirmed** The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the **confirmation** of the organism to Genus, species and/or race or pathovar level.
- **Not Detected** The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.
- **Suspected** Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations can not be made. This term may also be used with abiotic entries.
- **Inconclusive** Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.
