Background &
Context

Methodology
and Findings

Next Steps

Economic Valuation of Ecosystem Services

“A well-functioning environment is the foundation of Kenya’s economic future.”

Wangari Maathai
Founder, Green Belt Movement
2004 Nobel Peace Prize Laureate

“Undervaluation and inadequate information has resulted in marginalization of forest ecosystems in budget allocations, land-use change decisions, leading to excisions and degradation.”

~ David Langat, Kenya Forest Research Institute

Ecosystem Service Valuation of Key Watersheds in Kenya

IGAD Climate Prediction and Applications Centre
"Fostering Climate Prediction and Applications"

Alignment with Government of Kenya Initiatives

KENYA
VISION 2030

“Big Four”
Agenda

Food Security

Manufacturing

Health

Housing

Alignment with Government of Kenya Initiatives

Goal

To develop and sustainably manage, conserve, restore and utilize forests and allied resources for **socio-economic growth and climate resilience.**

Strategic Objective

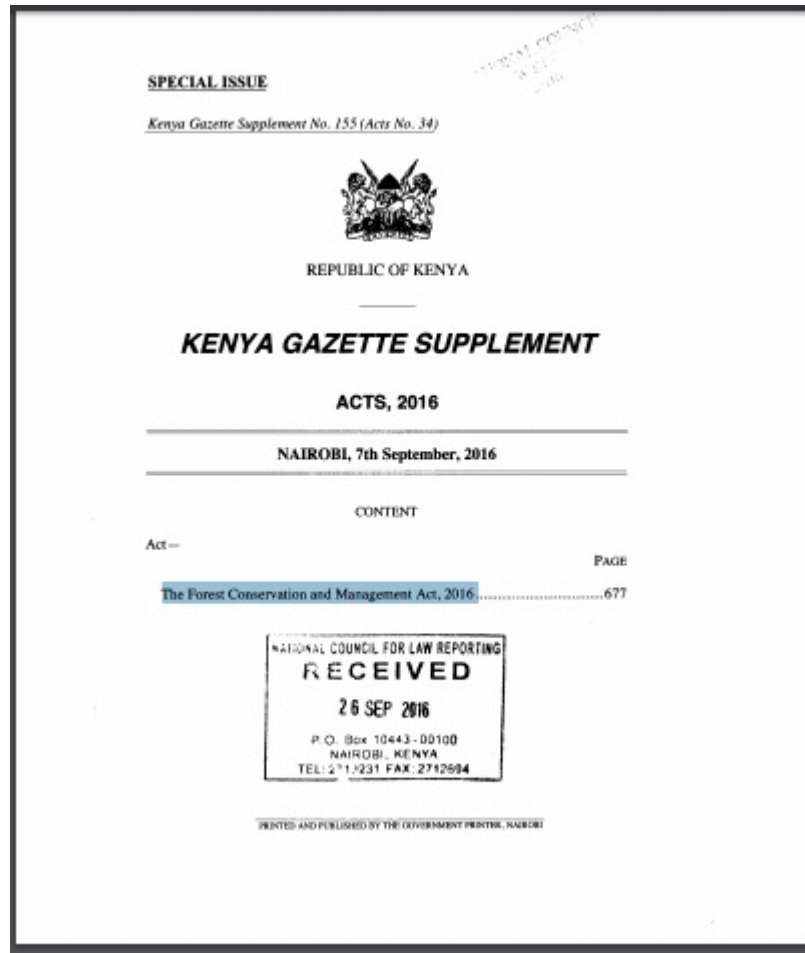

Strategic Objective 2:

“Enhance forest-based **economic, social and developmental benefits.**
Need for **valuation** of forests’
provisioning of ecosystem goods &
services”

Stakeholders

- **Communities**
- Private Sector
- National Government
- County Governments
- Civil Society

Alignment with Government of Kenya Initiatives

Forest Conservation and Management Act

Reporting on the state of forests and forest resource strategies

Incentives to maintain forest cover, including the Forest Conservation and Management Trust Fund (PES mechanism)

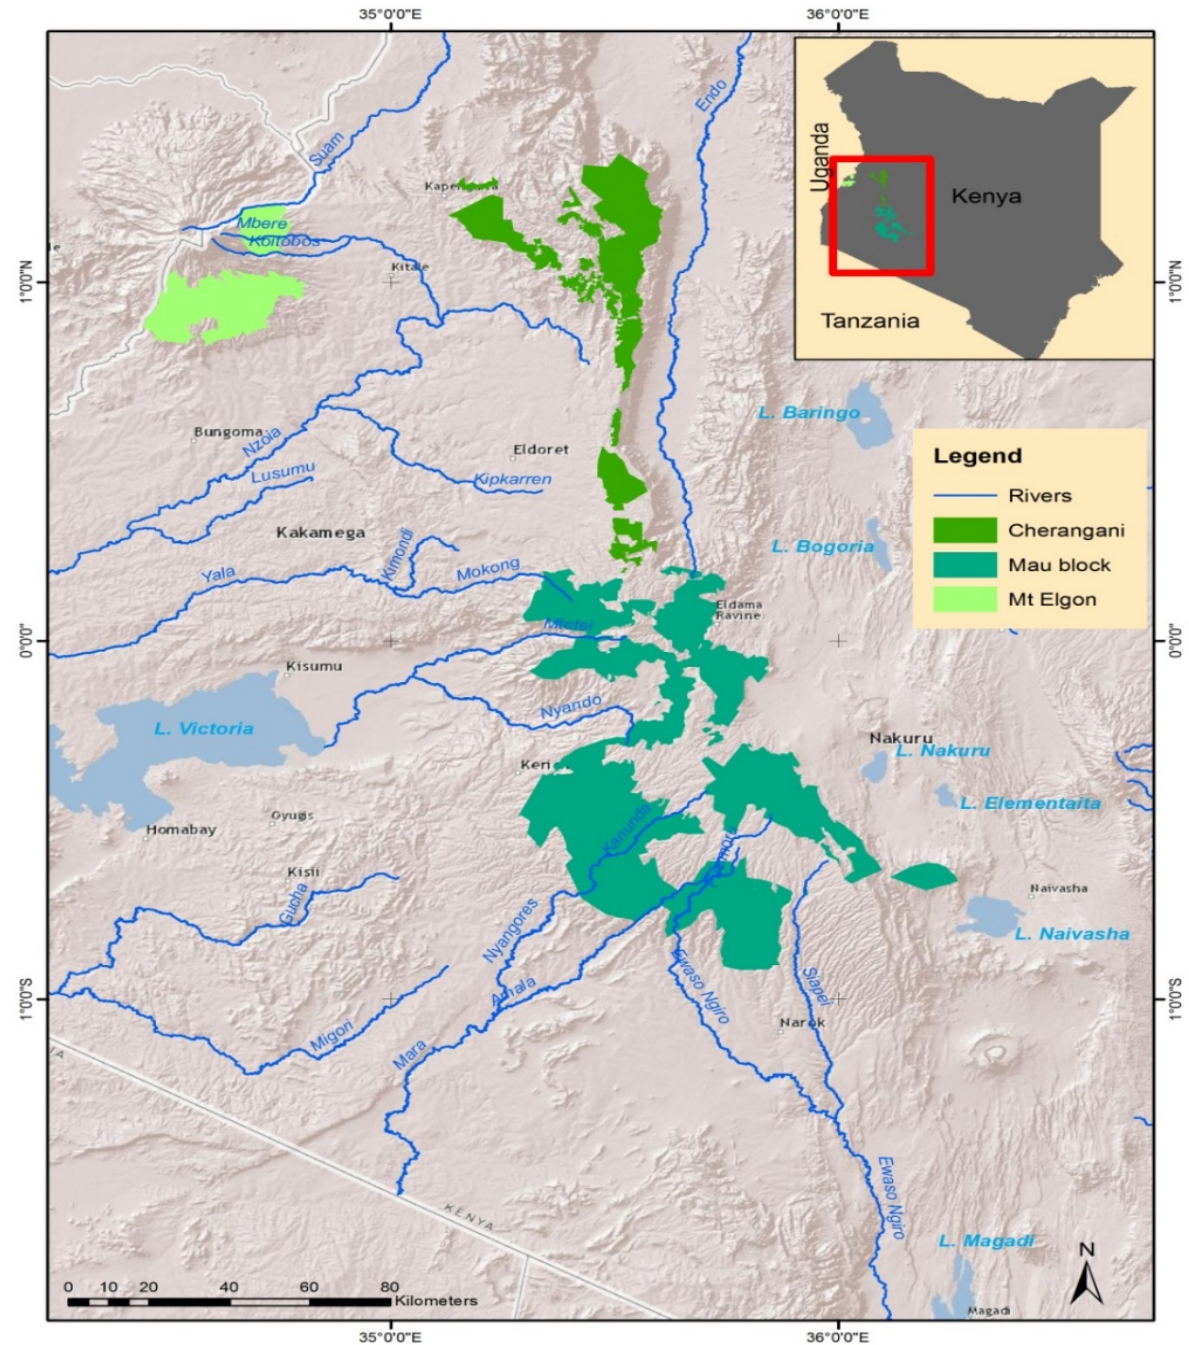

Provision for community participation in forest management

Focus on Three Key Watersheds

Mau Forest Complex

Cherangani Hills

Mt. Elgon

Ecosystem Services Valuation (ESV)

purpose and objectives

Systematic assessment of the economic value of the 3 target watersheds, including non-monetary benefits

Model methodology and coordinated database for future use in other watersheds

Inform decision-making and policy at multiple levels (national and county); set the stage for implementation

| | |
|----------------------------------|---|
| | |
| Literature Review | existing valuation studies in the focus watersheds or related ecosystems |
| Stakeholder Consultations | identify data gaps and key focus areas |
| Secondary Data Collection | from natural resource management agencies (Kenya Forest Service, Kenya Wildlife Service, Water Resource Management Authority, etc.) |
| Primary Data Collection | household surveys |
| | market and industry surveys |
| | participatory rural appraisals |

Direct Use

Provisioning

Food, water, timber,
construction materials,
energy, medicinal herbs,
fodder

Market Prices
Market Price Proxies
Contingent Values
Replacement Values

Indirect Use

Regulating & Supporting

Flood control, water
purification, climate
regulation, air quality
improvement
Nutrient cycling, soil
erosion control, pollination

Replacement Cost
Avoided Cost

Non-Use

Option, Existence & Bequest

Aesthetic, cultural,
religious, ritual, heritage
Use by future generations

Contingent Valuation
Benefit Transfer

Primary Data Collection

Household Surveys

over 1,000 surveys
conducted

Forest products and economic dependence

Water quality and uses

Relative importance of benefits

- Economic
- Subsistence
- Spiritual / Cultural
- Future use

Threats

- Over grazing
- Land degradation
- Soil erosion

Primary Data Collection

Community Focus Groups

| ES type | Ecosystem Services | Relative Importance Value | | |
|---------------------|---------------------------|---------------------------|-------------|-------------|
| | | Mt. Elgon | Cherangany | Mau |
| Provisioning | Water | 0.15 | 0.20 | 0.18 |
| | Firewood | 0.12 | 0.14 | 0.08 |
| | Fodder/Pasture | 0.10 | 0.12 | 0.08 |
| | Maize | 0.08 | | |
| | Medicine | 0.06 | 0.10 | 0.10 |
| | Timber | 0.05 | 0.12 | 0.03 |
| | Bamboo Shoots | 0.04 | | |
| | Charcoal | 0.04 | | |
| | Employment | 0.04 | | |
| | Poles | 0.03 | | 0.06 |
| | Vegetables/Mushrooms | 0.03 | | 0.03 |
| | Honey | 0.02 | 0.06 | 0.06 |

| Supporting | Habitat/Biodiversity | 0.03 | 0.04 | 0.06 |
| Total | | 1.00 | 1.00 | 1.00 |

Valuation Findings

The **Total Economic Value** of the three watersheds is estimated to be KES 357 billion (USD 3.5 billion) per year

Regulating services (e.g. water storage and climate regulation) provide more than half of this value

Valuation Findings

- **Subsistence use** by households: KES 22.9 billion/year (~US \$229 million). This represents 50% of the total annual value of tea exports (2017)
- Approximately 35 million m³ of **water** valued at KES 3.4 billion/year (~US \$34 million) is extracted for irrigation, industry and commercial uses
- The **total value added by the forest industry and trade** is approximately KES 4.3 billion/year (~US \$43 million)

Hydropower stations
in these watersheds
generate
170 megawatts
per year valued at
US \$119 million

What are the tradeoffs?

Tourism is one of Kenya's largest foreign-currency earners.

Direct contribution to GDP is forecast to reach USD 3.7 billion by 2025.

(World Travel and Tourism Council, 2015)

Ancestral Lands in the Forest

Forest Adjacent Communities

“Increasingly, forests and agriculture are being considered together as **synergistic components** of sustainable development.” (FAO, 2016)

Agriculture production in the study area contributes **24% of Kenya's GDP**

Forests and Agriculture

Total Economic Value of insect **pollination** for crop production estimated at KES 930 million (2015)

Micro-climatic influences of forests on tea yield estimated at KES 2 billion/year

Next Steps and Recommendations

Chart a way forward for integration of ecosystem services into **national accounts**

Use ecosystem service **mapping** to identify strategic areas providing key services and hotspots for intervention measures

Apply ecosystem service valuation to **reforestation goals**, including meeting Kenya's Bonn Challenge pledge of restoring 5.1 million forest hectares by 2030

Next Steps and Recommendations

Integrate ecosystem service assessments into **County Integrated Development Plans**

Make the business case for **green infrastructure** for water storage and quality improvements

Engage **partners** in watershed investments (e.g. tea sector, hydropower, tourism) including PES and water funds
