GGAA 2022
ORLANDO, FLORIDA USA

OPTIONAL Workshop:

C-LOCK GreenFeed Systems In-depth User Training
Sunday, June 5, 2022 | 6:30PM – 8:30PM | Orlando, Florida USA

Fee: FREE *(Space is limited. Advance registration is required.)*

www.conference.ifas.ufl.edu/GGAA

This workshop will be conducted onsite at GGAA 2022. *You must attend in person to participate.* The GreenFeed system is used to model, monitor, analyze, and control cattle biological parameters and identify opportunities to increase efficiency and productivity. Through a systematic approach that incorporates intelligent data-mining techniques, measurements, and numerical modeling, this system can be used to detect problems that lower efficiency and productivity.

This In-depth GreenFeed User Training will cover:

- Maintenance, calibration, and system design
- User interface
- Data review and analysis

The workshop will be presented by Scott Zimmerman, *President and Director of Engineering for C-Lock.* He has many years of experience with numerical modeling and large databases and has a solid background in analytical measurements. He has a bachelor's degree in civil engineering from Washington State University and a master's degree in water resource engineering and hydraulics from the University of Iowa.

This training provides more in-depth coverage of how GreenFeed users can pinpoint problems, identify opportunities, and obtain maximize benefit of using the system to save time and reduce operating costs.

NOTE: You may also benefit by attending the 9:00AM – 12:30PM GreenFeed Systems Workshop earlier in the day.
