

Louisiana's 2012 Coastal Master Plan

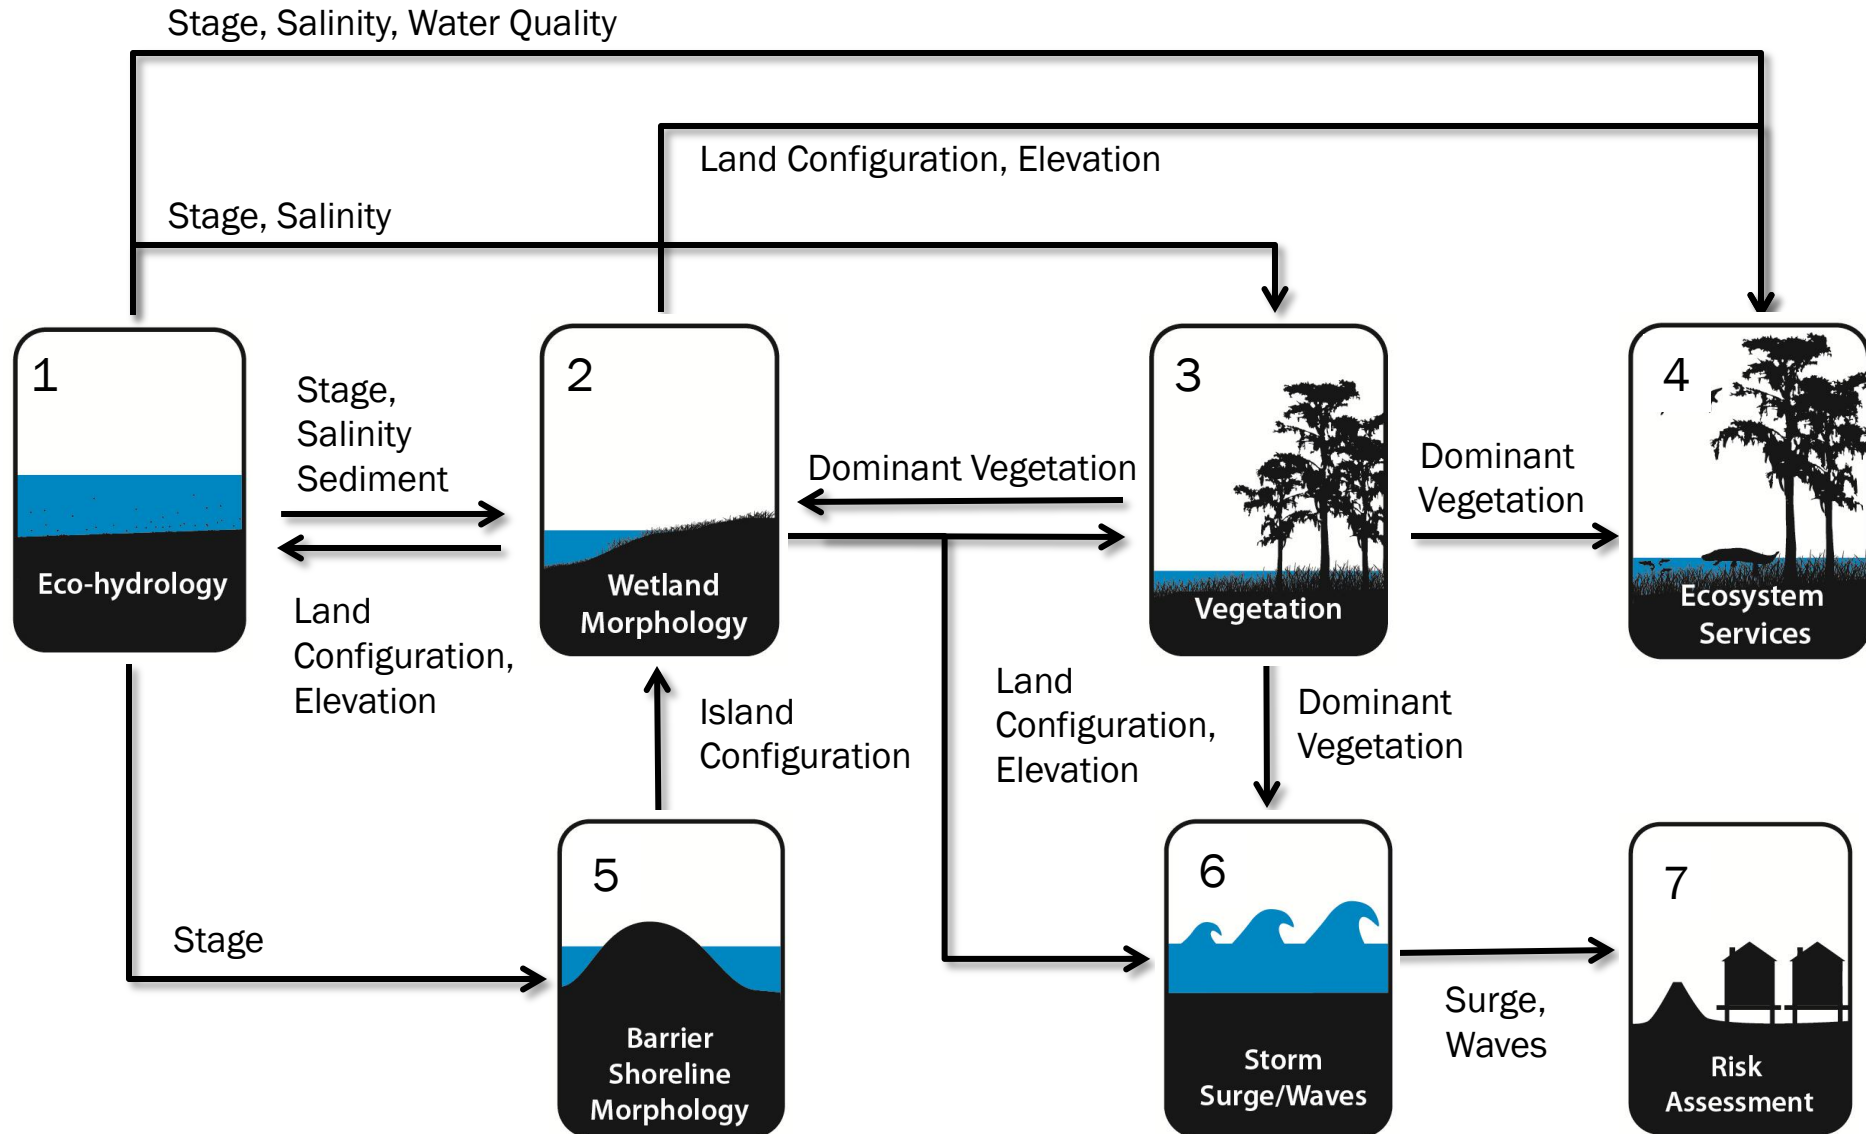

UPPER TROPHIC LEVEL MODELING TO
SUPPORT PLANNING FLOOD PROTECTION AND
WETLAND RESTORATION IN COASTAL
LOUISIANA

J. Andrew Nyman, LSU AgCenter

Modeling in a Systems Context

1. American alligator
 2. muskrat
 3. river otter
 4. speckled trout
 5. brown shrimp
 6. white shrimp
 7. largemouth bass
 8. gadwall
 9. green-winged teal
 10. mottled duck
 11. neotropical migrants
 12. roseate spoonbill
 13. wild-caught crawfish
 14. eastern oyster
- Nyman, LSU AgCenter
- Baltz, LSU
- Kaller, LSU AgCenter
- Leberg, ULL
- Romaine, LSU AgCenter
- Soniati, UNO

HABITAT SUITABILITY INDEX MODELS: AMERICAN ALLIGATOR

Fish and Wildlife Service

U. S. Department of the Interior

HABITAT SUITABILITY INDEX MODELS: AMERICAN ALLIGATOR

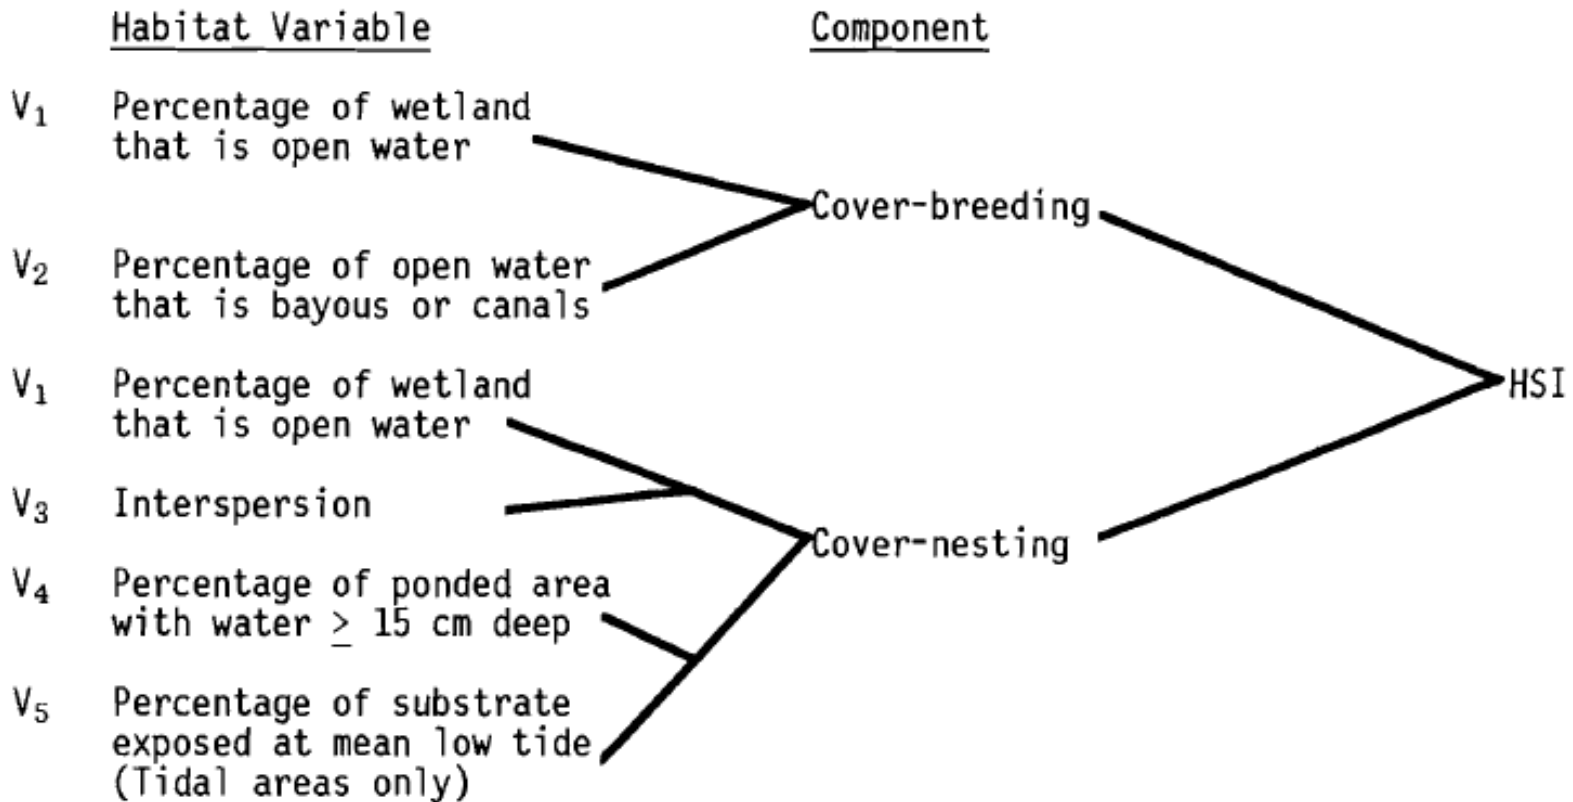

Figure 1. Relationship of habitat variables and the cover life requisite for breeding adults and nesting females in the alligator HSI model.

HABITAT SUITABILITY INDEX MODELS: AMERICAN ALLIGATOR

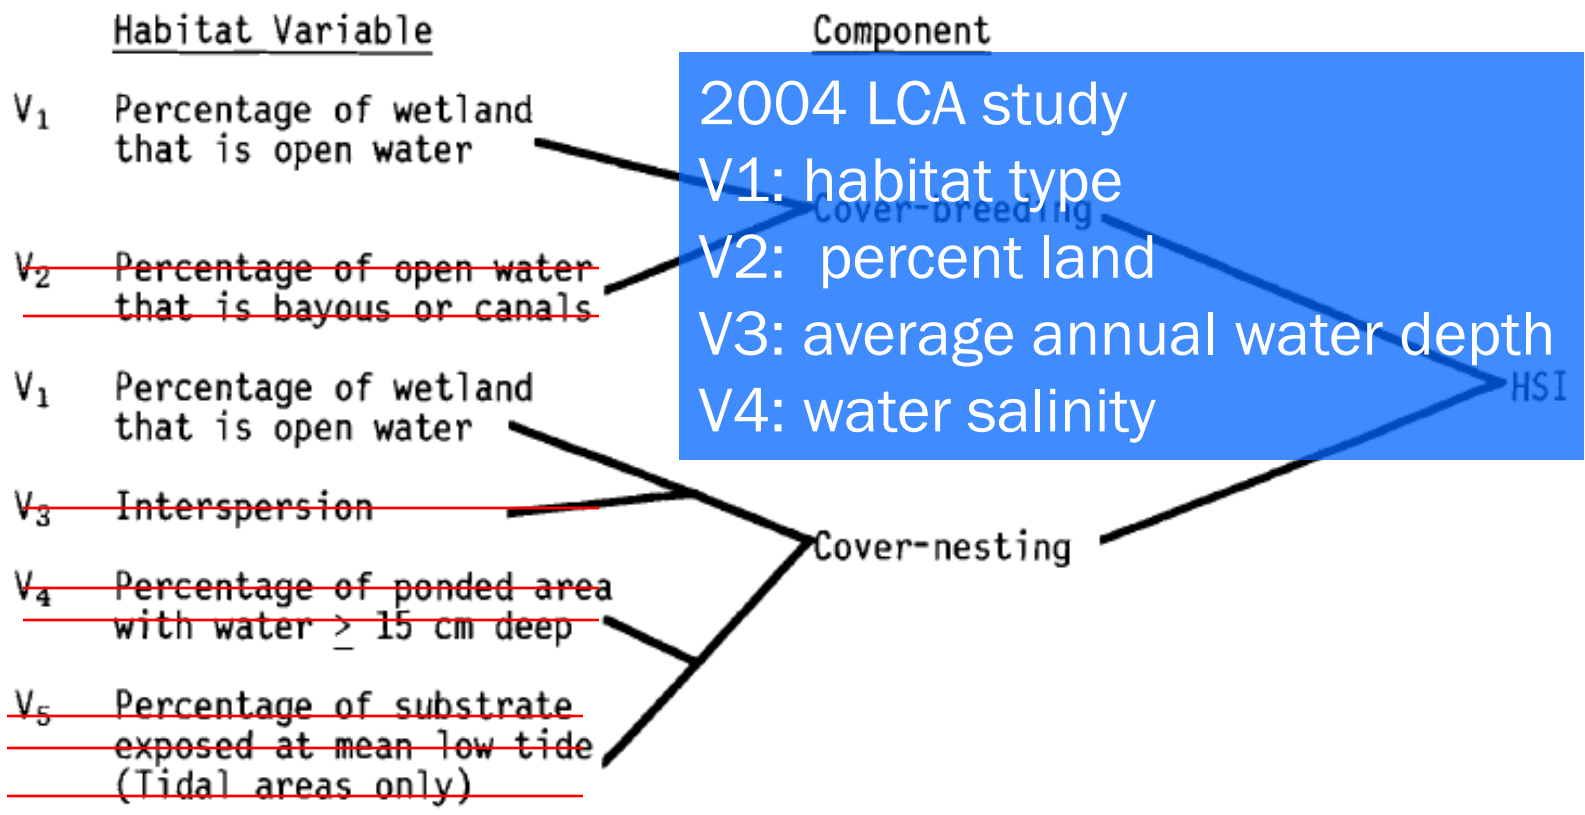

Figure 1. Relationship of habitat variables and the cover life requisite for breeding adults and nesting females in the alligator HSI model.

HABITAT SUITABILITY INDEX MODELS: AMERICAN ALLIGATOR

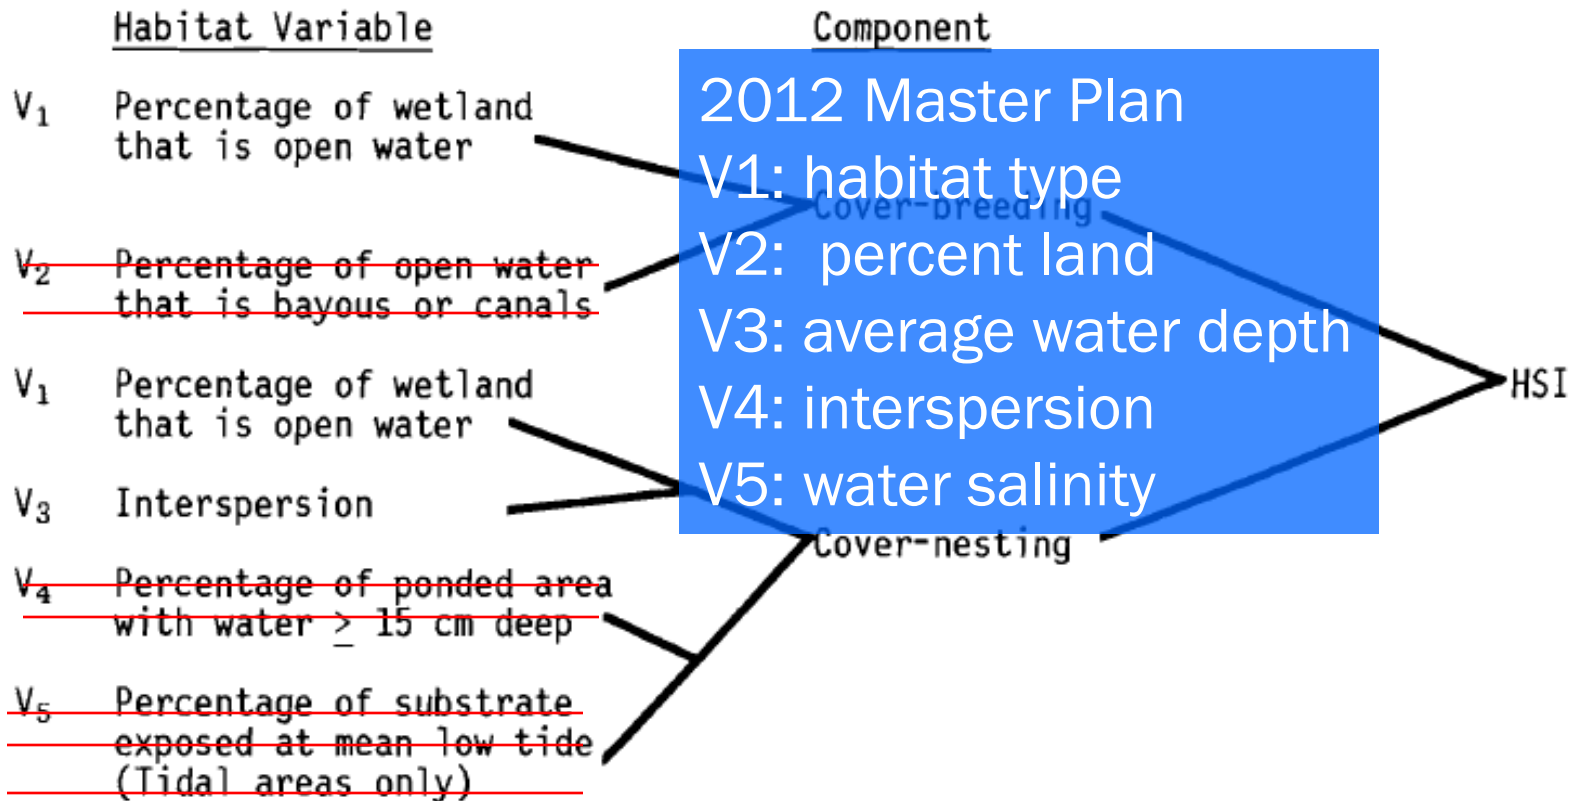

Figure 1. Relationship of habitat variables and the cover life requisite for breeding adults and nesting females in the alligator HSI model.

alligator: percent land

American alligator: land:water; SI_1

A relationship between those percent land; i.e. percent of area with emergent vegetation, and American alligator habitat suitability was previously presented in the HSI model by Newsom et al. (1987) and was therefore used in this model and is represented by:

$$SI_1 = (\text{percent land})/60 \quad \text{for } (\text{percent land}) < 60$$

$$SI_1 = 1 \quad \text{for } 60 \leq (\text{percent land}) \leq 80$$

$$SI_1 = 5 - ((\text{percent land}) * 0.05) \quad \text{for } 80 < (\text{percent land}) \leq 100$$

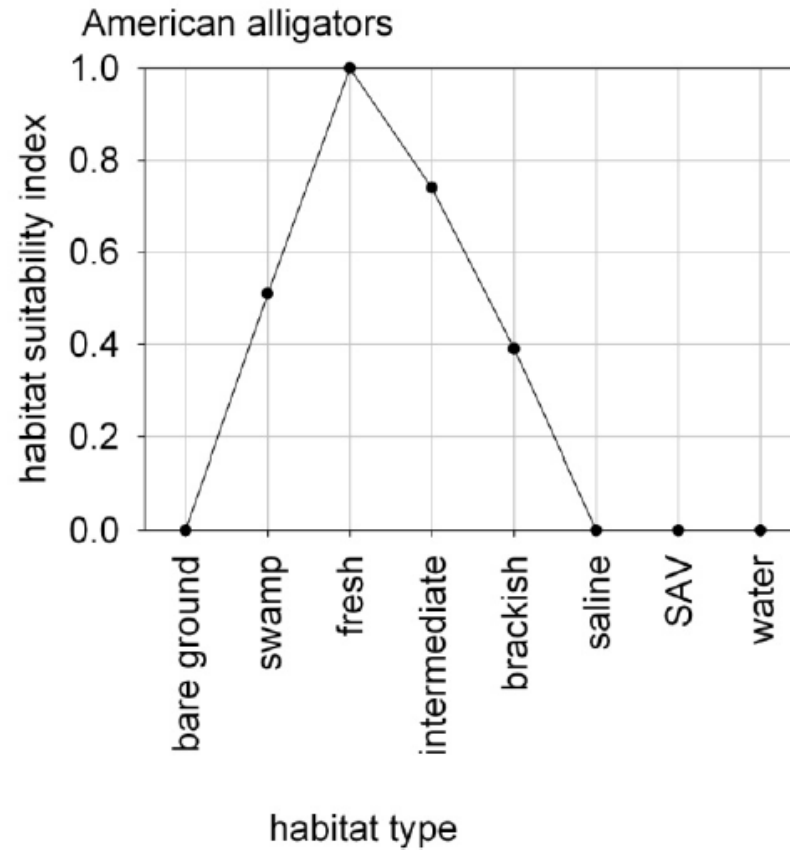

alligator: water depth

$$SI_2 = \left\{ \begin{array}{ll} 0 & \text{for depth during previous 12 months} \leq -0.3 \text{ m} \\ 2.0 + (\text{depth} \cdot 6.7) & \text{for } -0.3 \text{ m} < \text{depth during previous 12 months} < -0.15 \text{ m} \\ 1 & \text{depth during previous 12 months} = -0.15 \text{ m} \\ \text{depth} \cdot -6.7 & \text{for } -0.15 \text{ m} < \text{depth during previous 12 months} \leq 0.0 \text{ m} \\ 0 & \text{for depth during previous 12 months} > 0.0 \text{ m} \end{array} \right\}$$

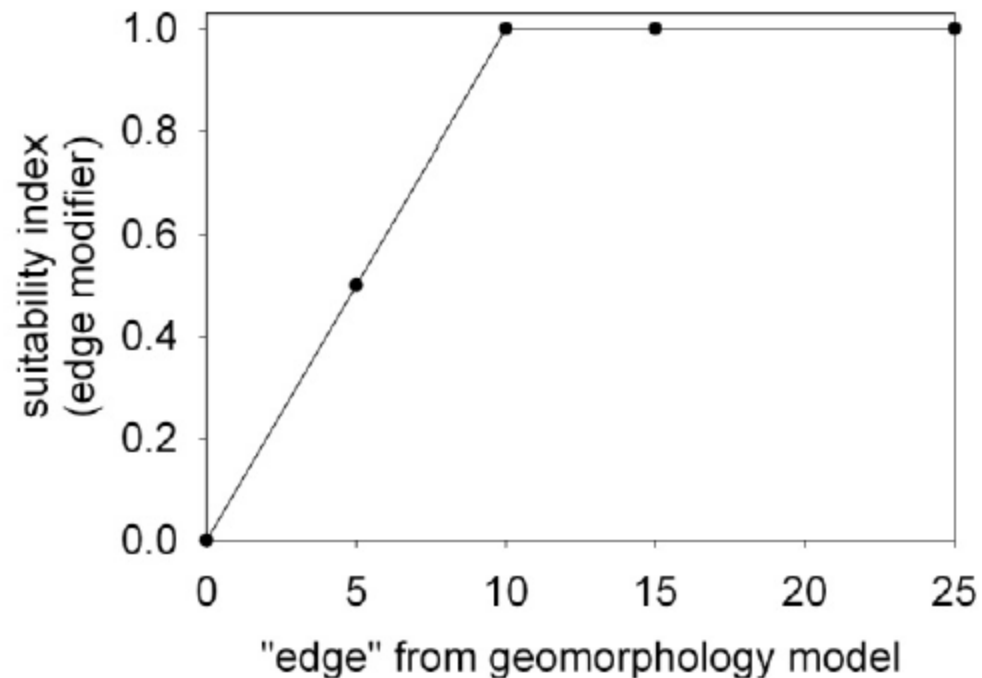

alligator: habitat type

alligator: edge habitat

$$SI_4 = \begin{cases} \text{EDGE}/10 & \text{for } 0 \leq \text{EDGE} \leq 10.0 \\ 1.0 & \text{for } \text{EDGE} > 10.0 \end{cases}$$

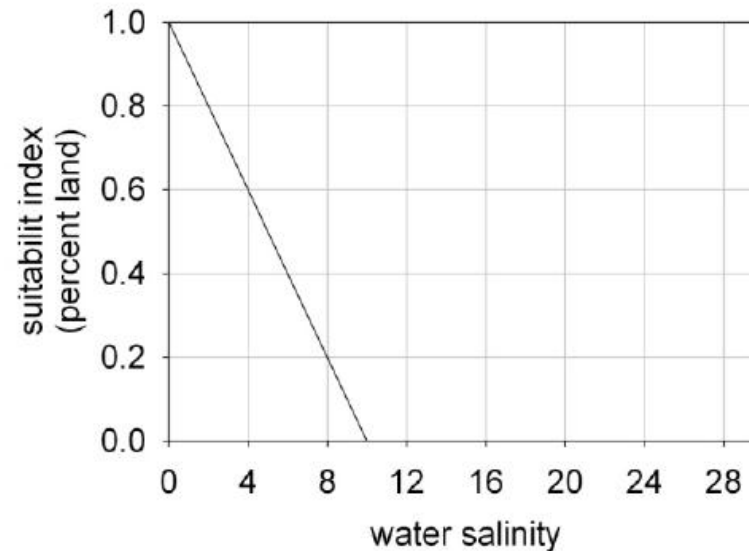

American alligator
edge modifier

alligator: water salinity

$$SI_5 = \begin{cases} (-0.1 * salinity) + 1.0 & \text{for } 0 \leq salinity < 10 \\ 0 & \text{for } salinity \geq 10 \end{cases}$$

alligator water salinity modifier

HSI for alligator is computed as the geometric mean of the 5 factors:

$$\text{HSI} = (\text{SI}_1 \times \text{SI}_2 \times \text{SI}_3 \times \text{SI}_4 \times \text{SI}_5)^{1/5}$$

HSI for alligator is computed as the geometric mean of the 5 factors:

$$\text{HSI} = (\text{SI}_1 \times \text{SI}_2 \times \text{SI}_3 \times \text{SI}_4 \times \text{SI}_5)^{1/5}$$

V1	V2	V2	V4	V5	5THROOT
1	1	1	1	1	1.00

HSI for alligator is computed as the geometric mean of the 5 factors:

$$\text{HSI} = (\text{SI}_1 \times \text{SI}_2 \times \text{SI}_3 \times \text{SI}_4 \times \text{SI}_5)^{1/5}$$

V1	V2	V2	V4	V5	5THROOT
1	1	1	1	1	1.00
0	1	1	1	1	0.00

HSI for alligator is computed as the geometric mean of the 5 factors:

$$\text{HSI} = (\text{SI}_1 \times \text{SI}_2 \times \text{SI}_3 \times \text{SI}_4 \times \text{SI}_5)^{1/5}$$

V1	V2	V2	V4	V5	5THROOT
1	1	1	1	1	1.00
0	1	1	1	1	0.00
0.2	1	1	1	1	0.72
0.4	1	1	1	1	0.83
0.6	1	1	1	1	0.90
0.8	1	1	1	1	0.96

HSI for alligator is computed as the geometric mean of the 5 factors:

$$\text{HSI} = (\text{SI}_1 \times \text{SI}_2 \times \text{SI}_3 \times \text{SI}_4 \times \text{SI}_5)^{1/5}$$

V1	V2	V2	V4	V5	5THROOT
1	1	1	1	1	1.00
0	1	1	1	1	0.00
0.2	1	1	1	1	0.72
0.4	1	1	1	1	0.83
0.6	1	1	1	1	0.90
0.8	1	1	1	1	0.96
1	1	1	1	1	1.00
0.2	0.2	1	1	1	0.53

model validation

uncertainty analyses
