

## **Assessment of Biodiversity and Ecological Uplift Potential to Leverage Natural Capital**

***Randy Mandel<sup>1</sup> and Galen Peracca<sup>2</sup>***

<sup>1</sup>Principal Ecologist – Biodiversity and Nature Restoration, Montrose Environmental Solutions, New Castle, CO, USA

<sup>2</sup>Senior Managing Consultant, Ramboll Environmental, ME, USA

An essential factor to determine a property's ecological status is the comparison of its current condition versus its potential by examination of reference areas of similar physiography and habitat type. Such comparison can be used to determine uplift potential through quantification of its ecological services such as biodiversity, habitat value, overall condition, and connectivity. As such, this presentation focuses on coupling on-site assessment with remote analysis to inform decision-making.
