

Interactive Workshop

10:55 – 11:40

**Assessing Cumulative Ecosystem Effects of
Multiple Restoration Projects**

Where are we headed?

Goal

At the conclusion of the workshop, we hope that all participants can walk away with the following:

- an understanding of the added benefit of the CE approach
- methods for implementing CE
- examples of CE application in the Columbia River and elsewhere
- CE as an actionable management and research tool

Objectives

- Collectively discuss CE concepts we have just presented
- Identify examples of CE in practice in other geographic areas
- Share lessons learned, opportunities for improvement, recommendations for future work

Seeds for Thought

Overarching Discussion Questions

- Are you, or is your agency/organization, practicing CE?
- If so, what were your successes and what challenges did you face?
- If not, can you envision implementing CE in your projects? What would that look like?
- What circumstances contribute to the success of a CE approach (i.e. ecosystem type, policy operating environment, workgroup/team type)?
- What circumstances might work against the success of a CE approach?
- What would you recommend a first time CE practitioner consider before implementing a CE approach?
