

Restoring Functional Oyster Reef Habitat in the Coastal Bays of Virginia

Bowdoin Lusk – The Nature Conservancy

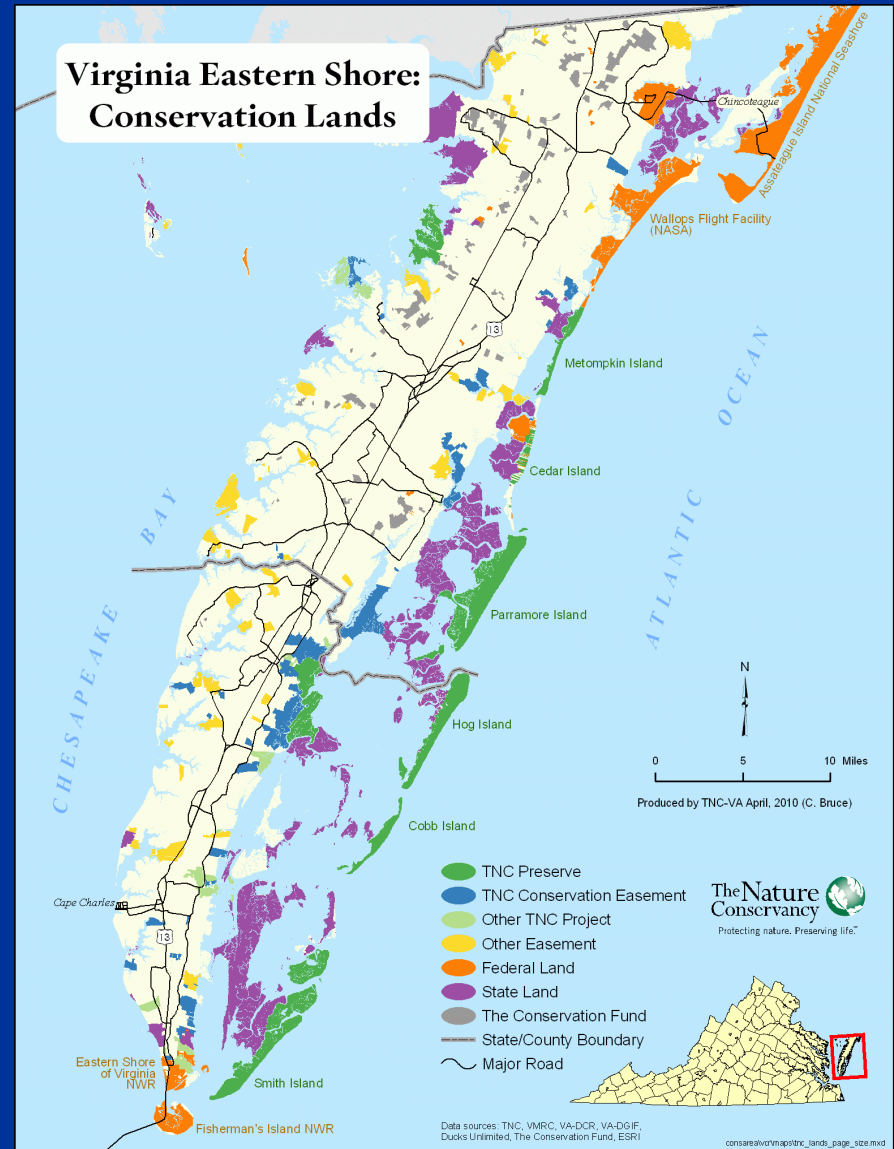

Barry R. Truitt – The Nature Conservancy

**James A. Wesson – Virginia Marine Resources
Commission**

Gus Lorber – Allied Concrete

COASTAL BAYS VISION

VCR coastal bays provide a mosaic of structurally diverse and healthy habitats, robust ecological functions, and resiliency in the face of global climate change to support bay - dependent biodiversity, healthy fisheries, water quality and shoreline buffering.

Seaside Heritage Program

VA Aquatic Resources Trust Fund

New Inlet Seafood Terry Bros. Seafood

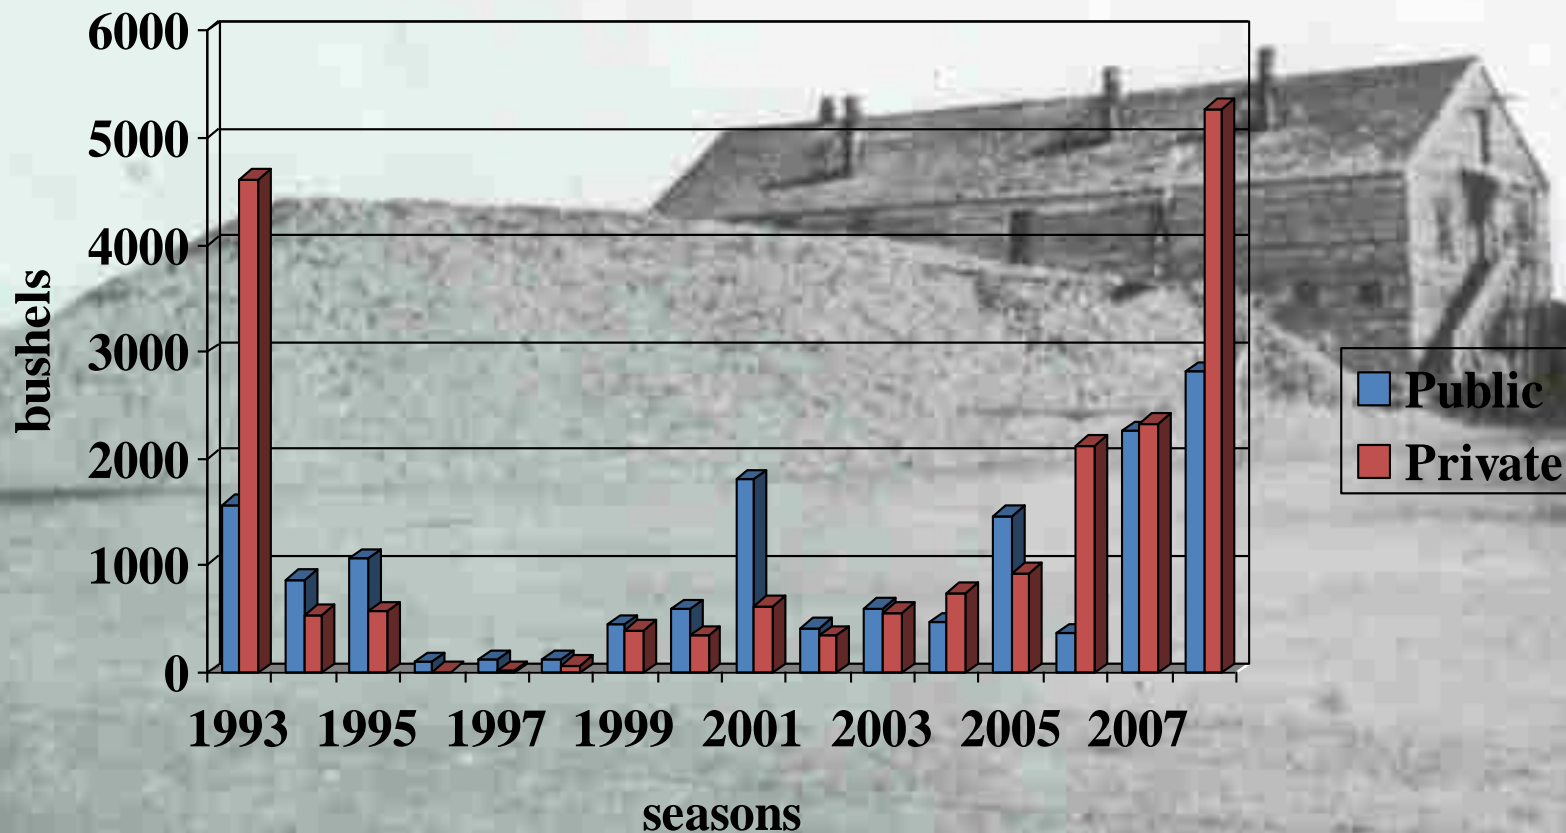

Virginia Seaside Oyster Restoration- Unique Set of Circumstances

- All oysters are intertidal – we have no subtidal reefs
- Adequate broodstock exists for consistent recruitment
- Disease is prevalent but many tolerant individuals persist
- Lack of shell cultch is greatest limiting factor

SYSTEM-LEVEL STATE CHANGE

SEASIDE EASTERN SHORE, PUBLIC AND PRIVATE OYSTER HARVEST, 1993/1994 TO 2008/2009

COMMERCIALY EXTINCT

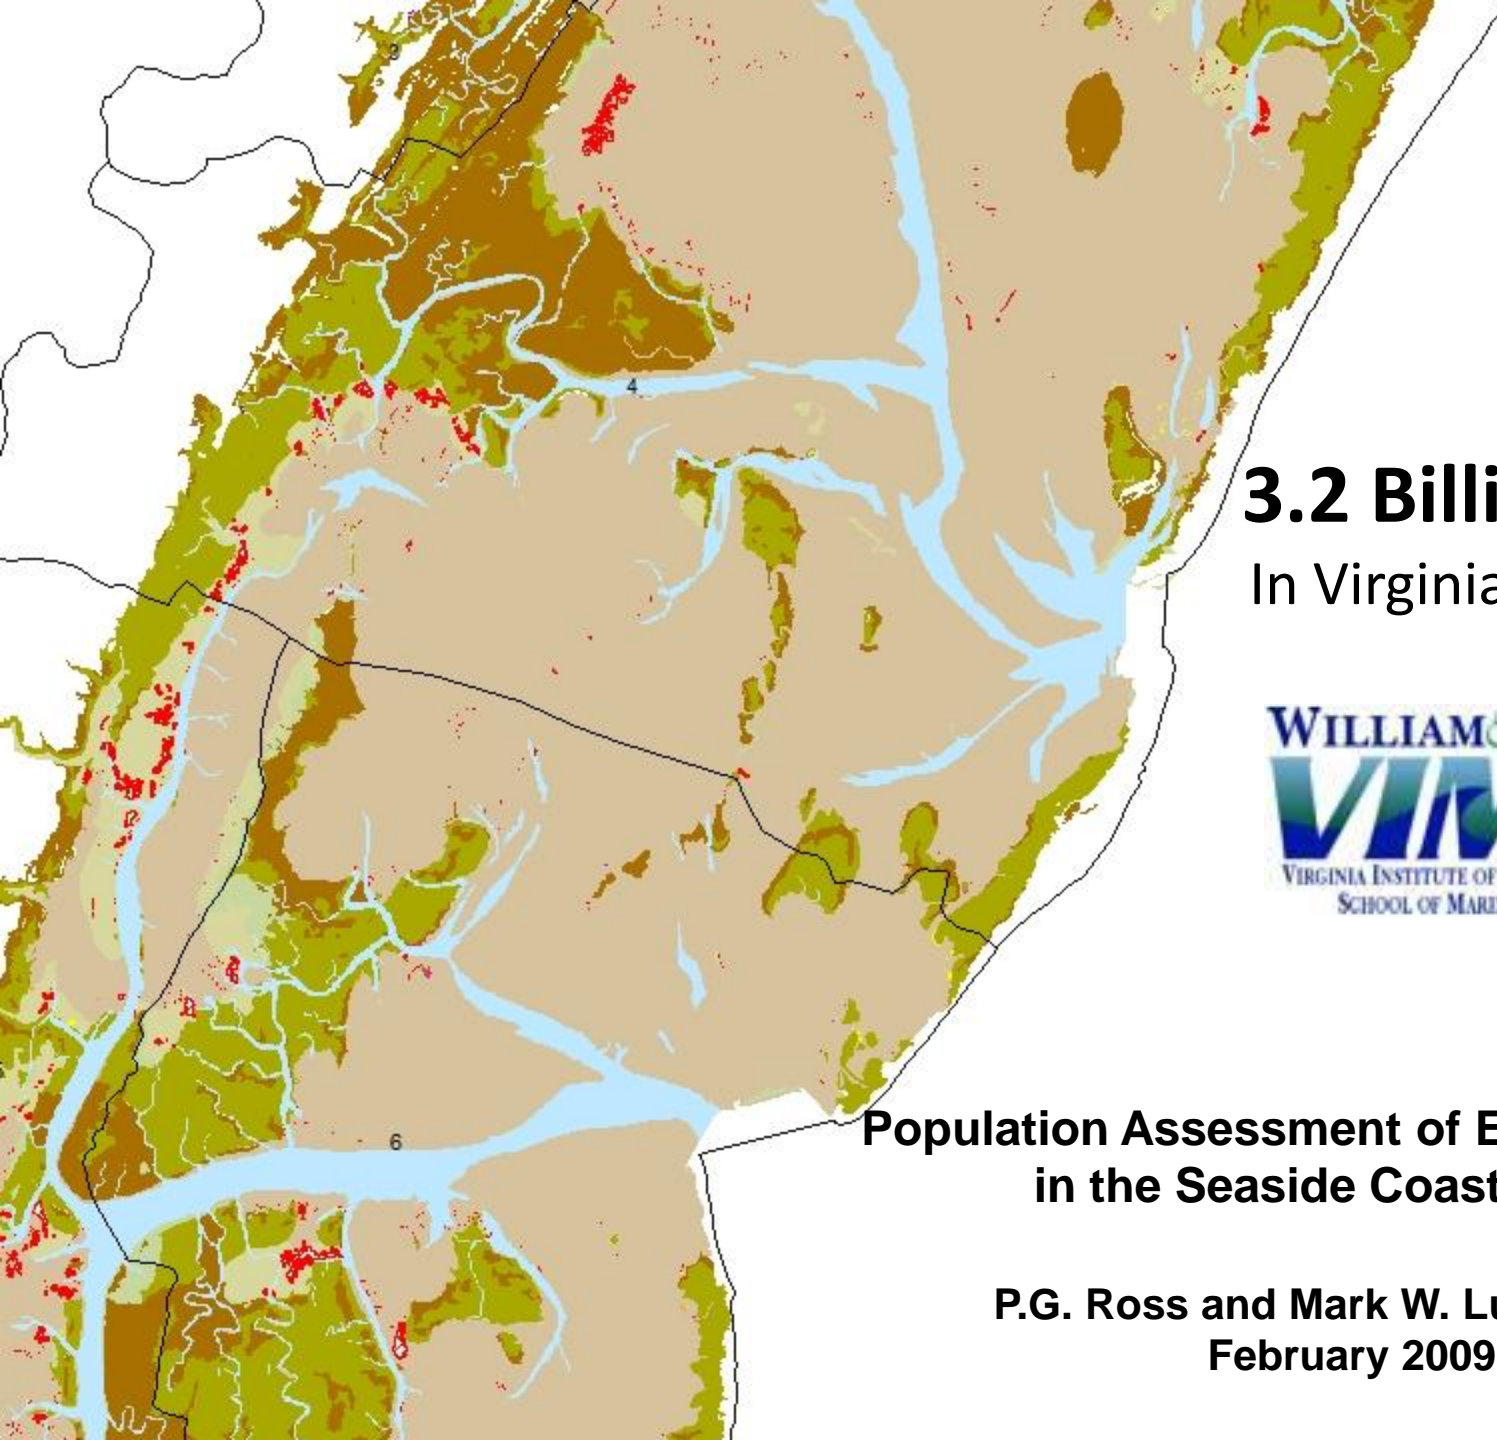

The Nature Conservancy 
Protecting nature. Preserving life.™

- Proof of Concept
- Functional Oyster Reefs
- “Ecosystem” Services
- No Harvest Sanctuaries

Restored 27 acres over 8 years

3.2 Billion Oysters In Virginia's Seaside Bays

Protecting nature. Preserving life.™

The Nature Conservancy 
Protecting nature. Preserving life.™

**Oyster Reef
Restoration
2 to 4 acres / year**

SCALE

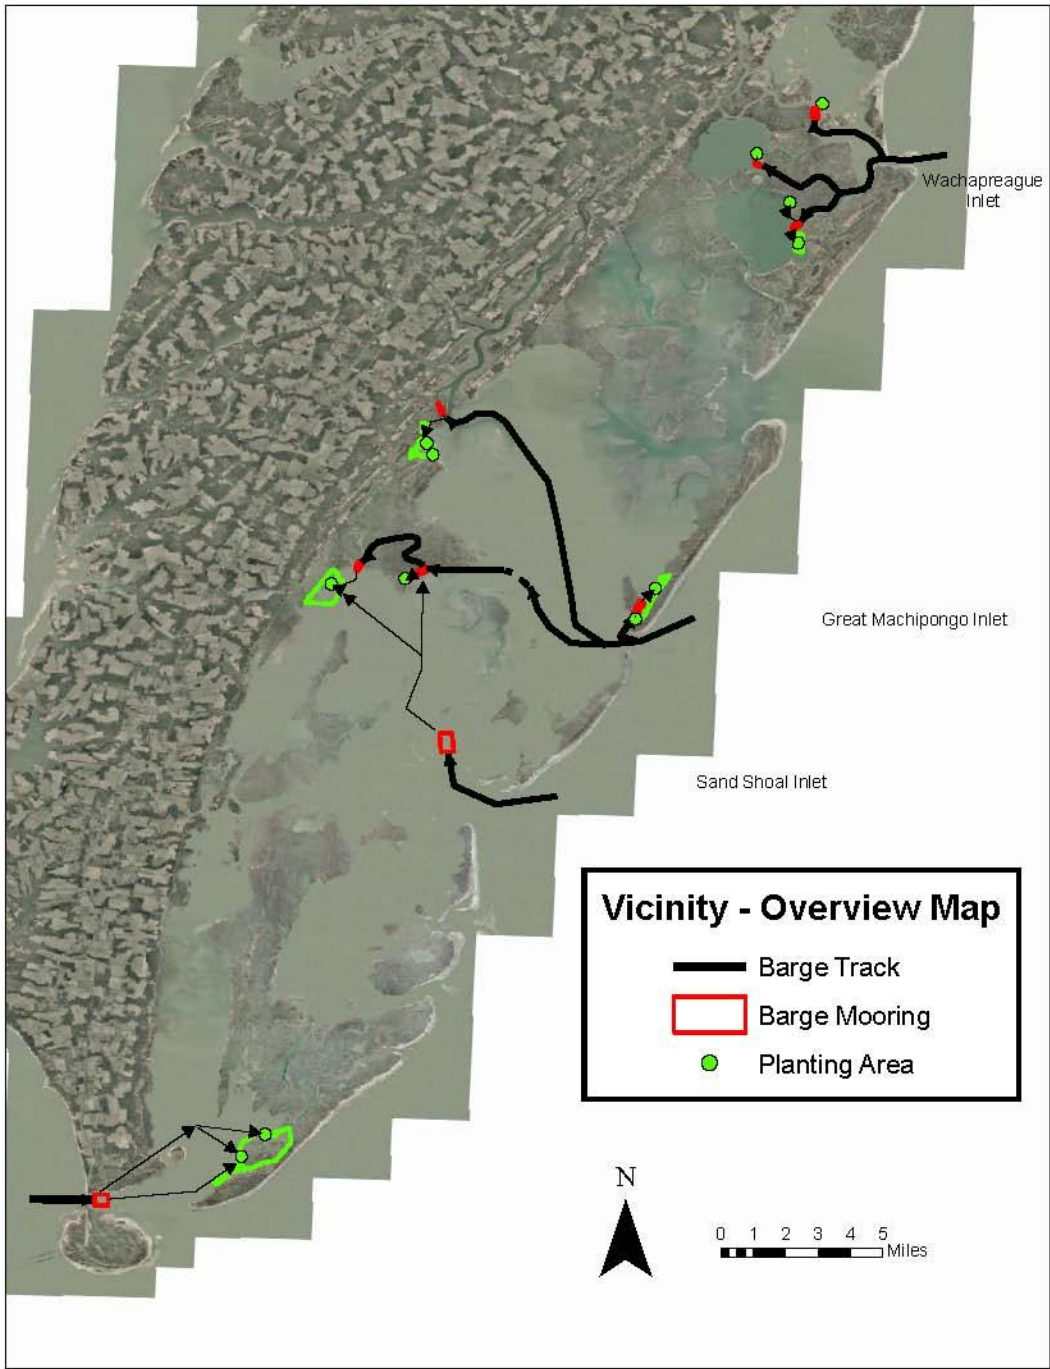

**ARRA Oyster Reef
Restoration
22 acres / 18 months**

**Create oyster reefs
at scale and spatial
distribution to
restore critical
habitat structure
and ecological
functions for
biodiversity**

The Cost of Speed

- 180,544 bushels of shell
- 11.6 acres created
- \$900,000 cost
- Nonlocal shell \$77.5k / acre
vs. Local shell \$35k / acre

Annually monitor 42 reefs
Average 4-5 samples per reef
Current cost of 2 interns for 6 mos +
boat trips = \$40,000 per year

ARRA Oyster Monitoring Results So Far:

- 2,239 live spat per m²
- 20.2 mm average shell length
- Only 8 of 14 reefs planted in time to receive spat set

Hillcrest 5 Reef

ADAPTIVE APPROACHES TO RESTORATION & MANAGEMENT

Lack of Suitable Substrate

Alternative Substrate
