Results: Major themes in experiencing and identifying spirituality, heritage, identity

- Spirituality: connectivity, connectedness; isolation
- Cultural heritage:
  - From past: many benefits
  - Intergenerational
- Cultural identity: collective, personal
- Overlapping and otherwise
• Spirituality + connectedness

“... [the woods] give me a connection to the creative force in the universe on a daily basis and also on, for this part of the world, a very natural basis and that’s the biggest spiritual benefit there is for me, the connection to the natural world in a location that is surrounded by very unnatural circumstances and land covers.”

“I know one of [the stones] has an actual, honest to god, thumbprint of the person who made it from 2000 years ago.”
Results: Experiencing and identifying heritage

- Heritage as intergenerational process

“...my grandparents came to this property in 1900 and they were hired to run the sugar bush that’s in the woods. It was owned by our neighbor and I was born July and in March when they were doing the sugar bush, that’s when I got acquainted with the woods cause they took me down and put me in a box while they did the sugar bush. Ha ha!”

“We’ve raised our kids to enjoy and take advantage of the quiet, peaceful, non-judgmental backwoods.”
Results: Experiencing and identifying identity

• Identity:

• Individual: “And you know when I was younger, living in the city, I lived in the city, but I’m country. I thrive here.”

• Collective: “… a lot of Jewish people for whatever reason seem to have a strong sense of social responsibility. So wanting to do the right thing with respect to future generations or nature might connect with that heritage”
Results: forest plots

**Figure 1: Shannon Index**

**Figure 2: Basal area density (m²)**

- Shannon Index values across sites
- Basal Area sums per site
“...if a woods is small enough that even when you’re in the very center of it, you’re fully aware of non-woods space beyond your boundaries, then that’s a distraction for most people. Whatever a person is looking for in a woods, the ability to see a house or hear somebody's lawn mower outside the boundaries detracts from that. So it needs to be big enough that you can exclude some significant degree of those non-woods external phenomena.”
Results: causal loop diagram
Discussion

- Themes and details of spirituality, cultural heritage, and cultural identity
- Social---ecological
- Systems thinking and relevant hypotheses about CES
- Calling for brainpower!
Thank you!

1. I often feel a sense of oneness with the natural world around me.
2. I think of the natural world as a community to which I belong.
3. I recognize and appreciate the intelligence of other living organisms.
4. I often feel disconnected from nature.
5. When I think of my life, I imagine myself to be part of a larger cyclical process of living.
6. I often feel a kinship with animals and plants.
7. I feel as though I belong to the Earth as equally as it belongs to me.
8. I have a deep understanding of how my actions affect the natural world.
9. I often feel part of the web of life.
10. I feel that all inhabitants of Earth, human, and nonhuman, share a common 'life force'.
11. Like a tree can be part of a forest, I feel embedded within the broader natural world.
12. When I think of my place on Earth, I consider myself to be a top member of a hierarchy that exists in nature.
13. I often feel like I am only a small part of the natural world around me, and that I am no more important than the grass on the ground or the birds in the trees.
14. My personal welfare is independent of the welfare of the natural world.
