

VALUING ECOSYSTEM SERVICES OF AN IMPACTED WATERWAY IN THE SOUTHWESTERN US

Matt Weber, US Environmental Protection Agency
Thomas Meixner, University of Arizona
Juliet Stromberg, Arizona State University

Study Background

- Goals
 - Value impacted ecosystem services
 - Value “Final Ecosystem Services”
 - Target Total Economic Value
 - Provide info useful for river management
 - Develop in-house valuation capacity
- Funding sources:
 - US EPA ORD/Nat’l Science Foundation
- Partnerships:
 - USGS/University of Arizona/Arizona State University

Site Information

- Effluent-dominated waterway & urban resource
- Riparian ecosystem where surface water is scarce
- Uncertain future

What are the Final Ecosystem Services?

Tumacacori, AZ

North of Amado, AZ

Near W. St. Mary's Rd., Tucson, AZ

Near W. El Camino del Cerro, Tucson, AZ

14 Focus Groups & 46 Individual Interviews

- Results in: *Landscape & Urban Planning* (2015) 133:37-52
- Expect an recursive approach for pretesting
- Visible river flow & trees were top attributes & seen as linked
- Surface water is cognitively associated with water supply scarcity concerns
- Mixed feelings regarding rivers with treated wastewater

Survey Overview

- Stated Preference Survey
- Choice Experiment
- Up to 5 contacts by mail
- ~26% response rate overall

OMB Control No. 2080-0080
Approval expires 2/28/2015

Survey:

Your Opinion Needed on an
Arizona River Issue

Photos showing the Santa Cruz River where there is flow, and where there is no flow. Open this survey to learn more and to submit your opinion on Santa Cruz River management.

Quantified Attributes

Summary of North Flow and Forest Possibilities

Summary of South Flow and Forest Possibilities

FULL BODY CONTACT:

During stormflows, the water quality is not considered safe for any type of human contact. However, during low-flow times the water in the North and South is currently considered safe for wading. Water quality could be improved to be considered safe for full body contact such as submersion during low-flow times. This would require further measures to control bacteria, which would mean an increase in taxes to pay for these measures.

Background Information

Photos as well as illustrations were used since many people were unaware of the perennial effluent dominated reaches.

The consumptive use of the riparian ecosystem, as well as the relationship of the perennial flow to groundwater was described.

Research Design

- Ecological Attribute vs. Recreational Attribute
- North Reach vs. South Reach
- Tucson Residents vs. Phoenix Residents

EXAMPLE VOTE			
<i>questions will look like the sample below</i>			
Location & Effect	Option A	Option B	Expected Future
North Flow & Forest	20 flow miles 125 forest acres	10 flow miles 45 forest acres	10 flow miles 45 forest acres
North Full Body Contact	Yes	No	No
South Flow & Forest	17 flow miles 460 forest acres	17 flow miles 460 forest acres	9 flow miles 230 forest acres
South Full Body Contact	Yes	No	No
\$ Cost to your Household per Year	\$60 Increase in Annual Taxes	\$40 Increase in Annual Taxes	\$0 Increase in Annual Taxes
HOW WOULD YOU VOTE? (CHOOSE ONE ONLY)	☒ I vote for Option A	☒ I vote for Option B	☒ I prefer Expected Future
	If you prefer <u>Option A</u> , check here	If you prefer <u>Option B</u> , check here	If you prefer <u>Expected Future</u> , check here

Analysis

- Choice Observations drive statistical model

$$\text{Utility}_{\text{household}} = f(\text{Price, Resource Changes, SocioDemographics})$$

- Discrete Choice Modeling:
Multinomial Logit Estimation

Preliminary Results

Parameter	Tucson n=260	p-value	Phoenix n=149	p-value
ASC: Chose Preservation	-26.70	0.011	-37.88	0.0018
Cost	-0.0153	0.000	-0.0254	0.000
North Intermediate	0.424	0.001	0.366	0.0134
North Maximum	0.709	0.000	1.121	0.000
North Body Contact	-0.139	0.223	0.236	0.0774
South Intermediate	0.509	0.003	0.944	0.000
South Maximum	0.744	0.000	1.18	0.000
South Body Contact	-0.122	0.190	0.0732	0.532
<i>Year of Birth</i>	<i>0.0134</i>	<i>0.0121</i>	<i>0.0189</i>	<i>0.0024</i>
<i>Male</i>	<i>-0.228</i>	<i>0.172</i>	<i>-0.343</i>	<i>0.0629</i>
<i>Donated to Envi Org</i>	<i>1.522</i>	<i>0.000</i>	<i>1.45</i>	<i>0.000</i>
<i>Household Size</i>	<i>-0.152</i>	<i>0.0311</i>	<i>-0.0304</i>	<i>0.644</i>
<i>Aware of River Location</i>	<i>0.220</i>	<i>0.249</i>	<i>0.0960</i>	<i>0.602</i>

Preliminary Results

Willingness To Pay per Household per year (2014\$)	Tucson	95% CI	Phoenix	95% CI
North Intermediate	\$ 27.71	+ - \$ 16.33	\$ 14.45	+ - \$ 11.19
North Maximum	\$ 46.39	+ - \$ 17.88	\$ 44.22	+ - \$ 12.80
South Intermediate	\$ 33.32	+ - \$ 18.72	\$ 37.22	+ - \$ 13.50
South Maximum	\$ 48.69	+ - \$ 18.11	\$ 46.43	+ - \$ 13.19

Preliminary Results

Willingness To Pay per Household per year (2014\$)	Tucson	Phoenix
North Intermediate	\$ 5.54 / mi	\$ 2.89 / mi
North Maximum	\$ 4.64 / mi	\$ 4.42 / mi
South Intermediate	\$ 8.33 / mi	\$ 9.31 / mi
South Maximum	\$ 6.09 / mi	\$ 5.80 / mi

Conclusions (based on preliminary results)

- Qualitative research provided the foundation
- Humble resources can be valuable
- Values respond to changes in scope
- Unusual results for “swimmable” water quality
- Support for non-use motivations, despite impacted resource status and urban proximity
- Similarities and differences between Tucson and Phoenix responses
