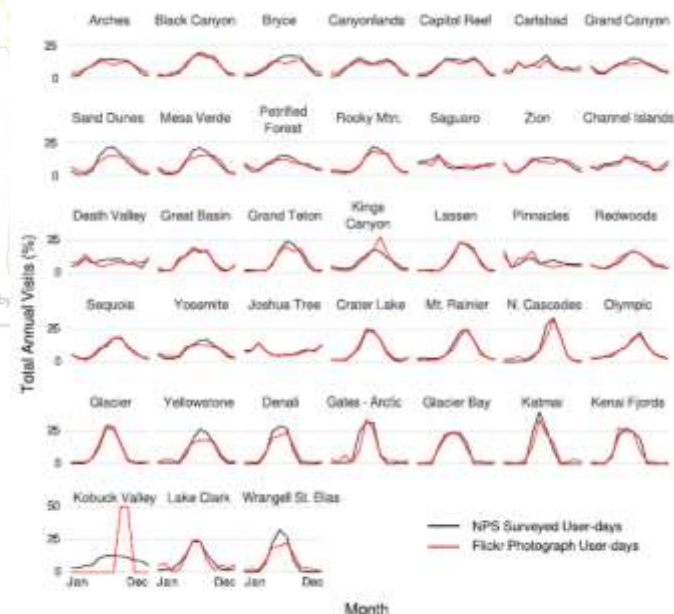

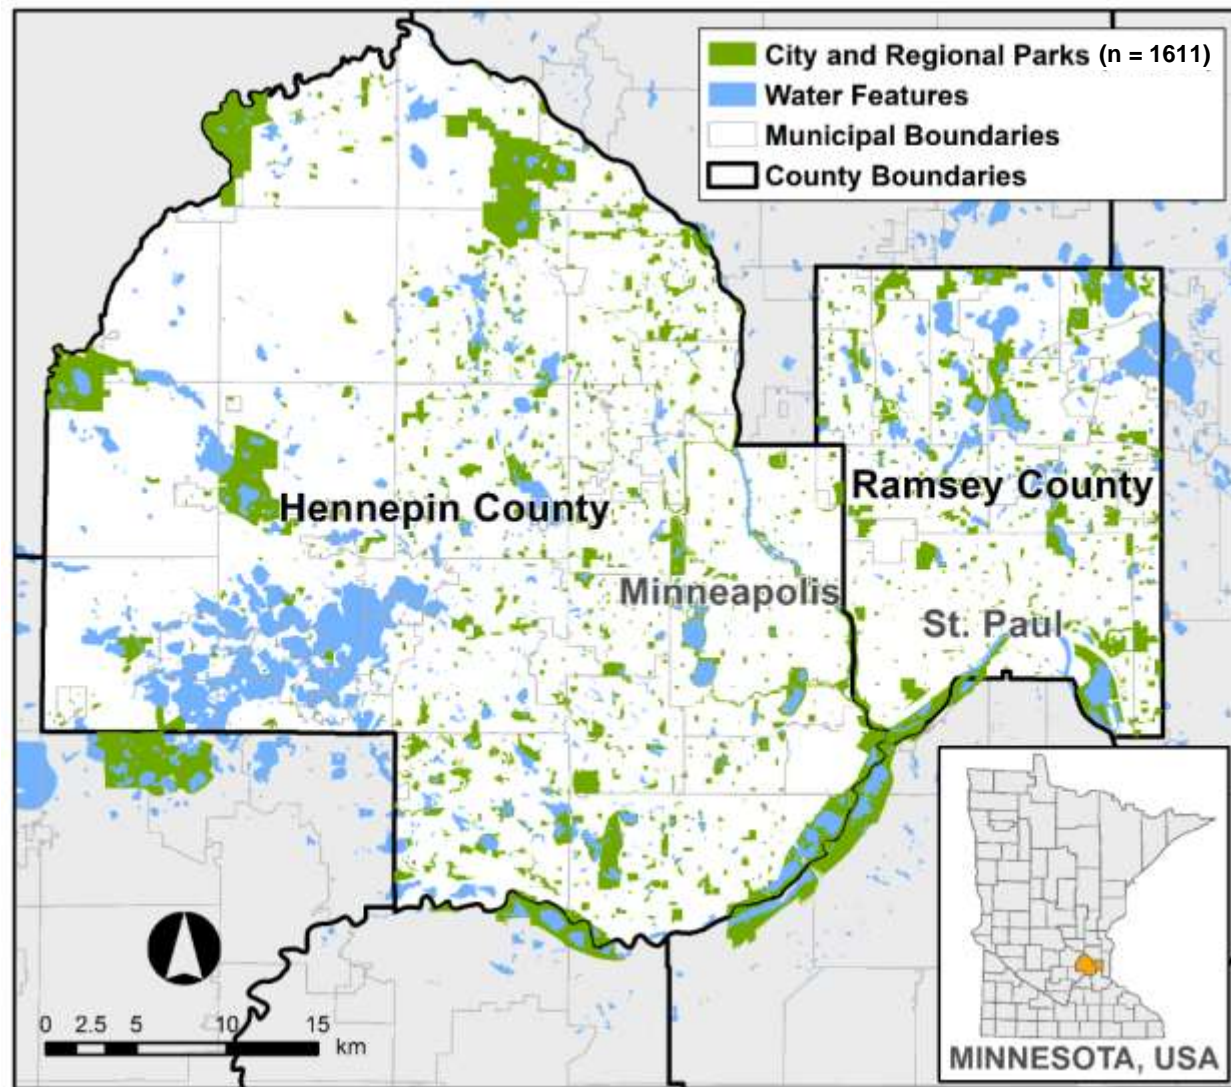

Fig 2. Average monthly visitation in each park from 2007 to 2013. Legend as the percent of total visitation measured by NPS and Flickr PUS.

Study Area

Research Questions

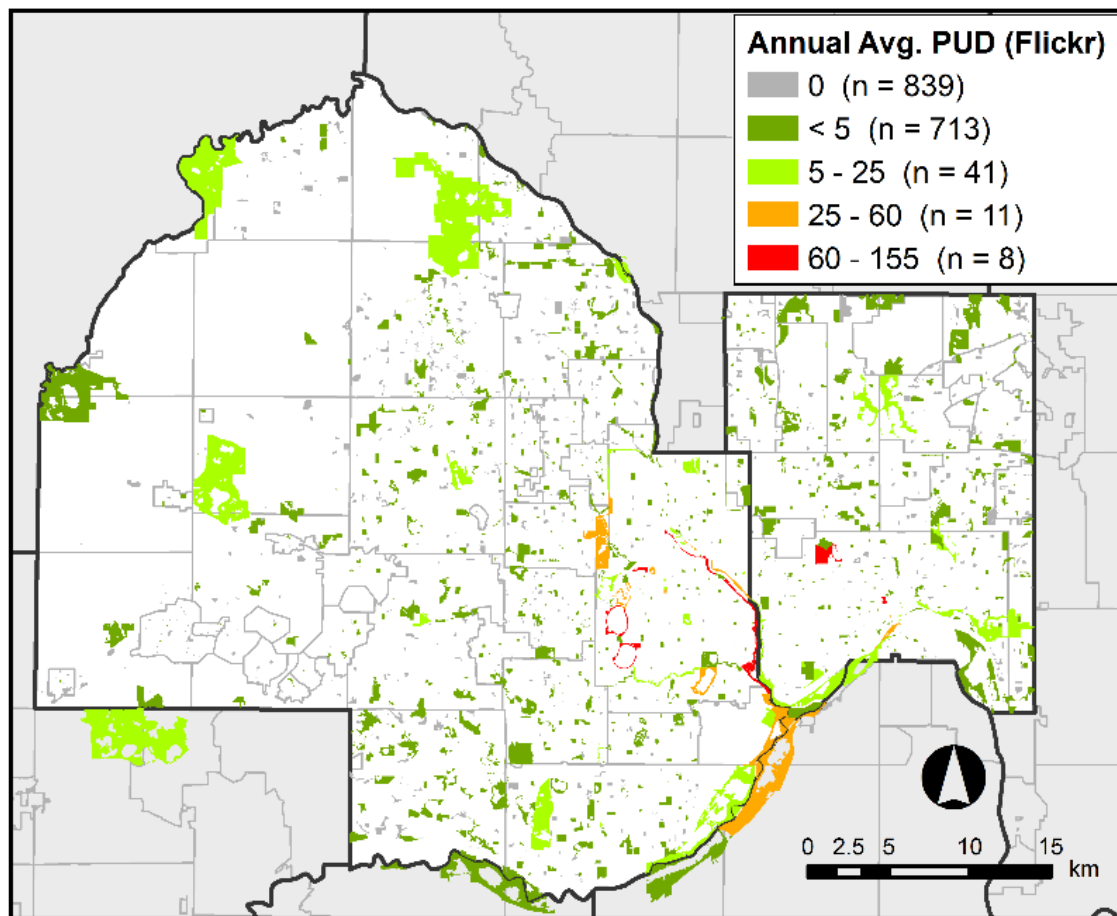

1. Can social media data (SMD) be used to measure urban park use? Which urban parks are used most?
2. How well do SMD compare to traditional survey methods of estimating urban park users?
3. What characteristics affect variation in visitation across urban parks?

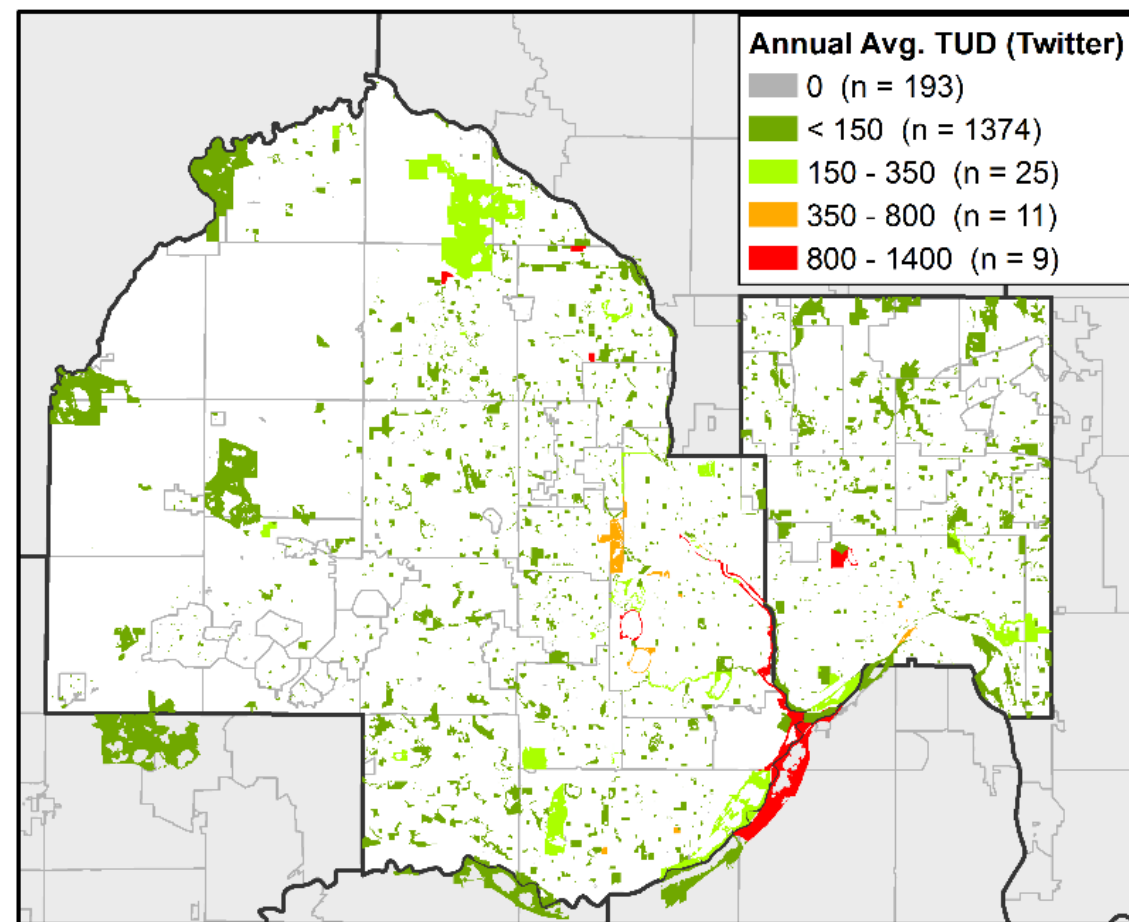

**RQ1: Can SMD be used to measure urban park use?
Which urban parks are used most?**

annual average Flickr
Photo User Days (PUD)
2005-2014

annual average Twitter
User Days (TUD)
2012-2014

Most “Visited” Parks

	PUD (rank)	TUD (rank)
Como Regional Park	154 (1)	967 (4)
Minnehaha Park	94 (2)	866 (5)
Parade Park	89 (3)	787 (10)
West River Parkway	91 (4)	843 (9)
Lake Harriet	70 (5)	443 (17)
Lake Calhoun Park	68 (6)	1023 (2)
Fort Snelling Park	58 (9)	1063 (1)
East River Parkway	48 (11)	1015 (3)

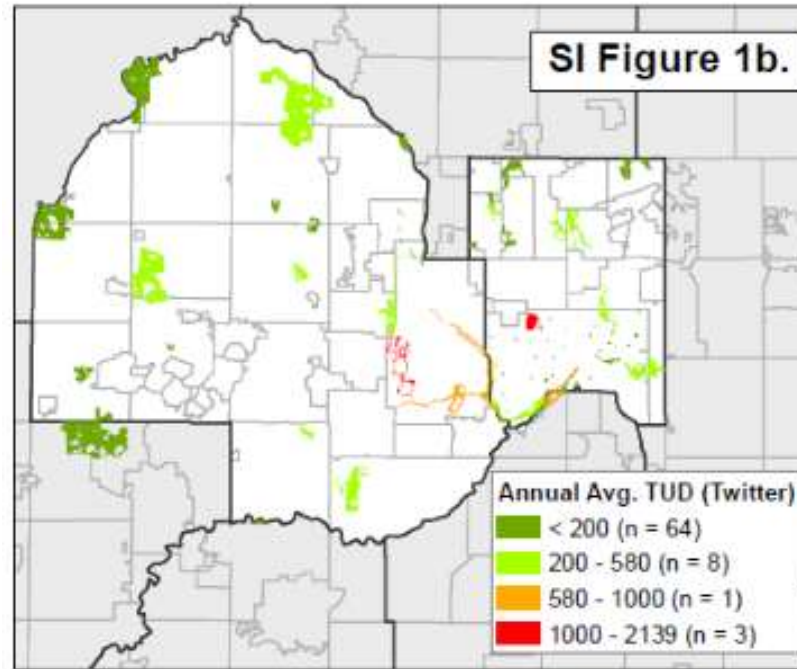

RQ2: How well do SMD compare to traditional survey methods of estimating urban park users?

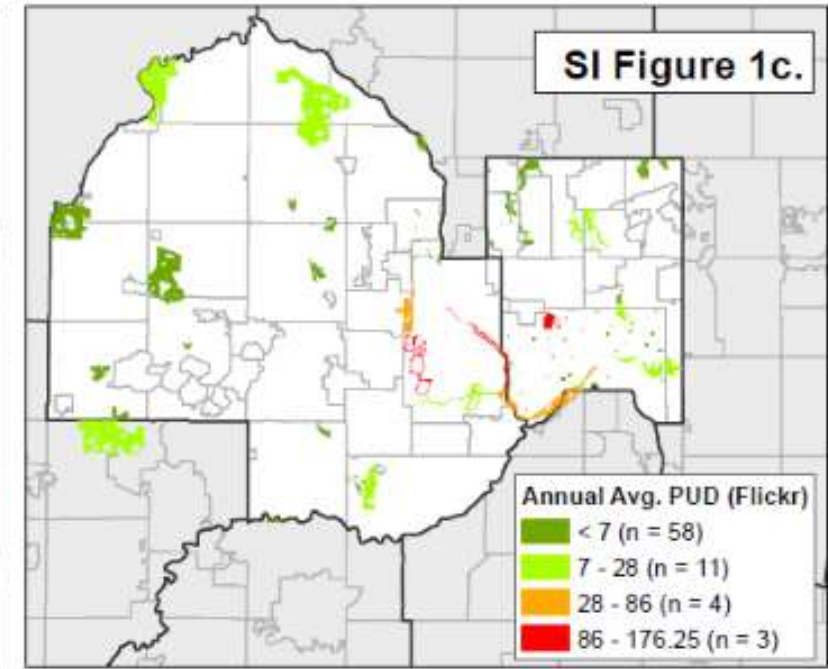

empirical visitation from agency survey data

annual average TUD

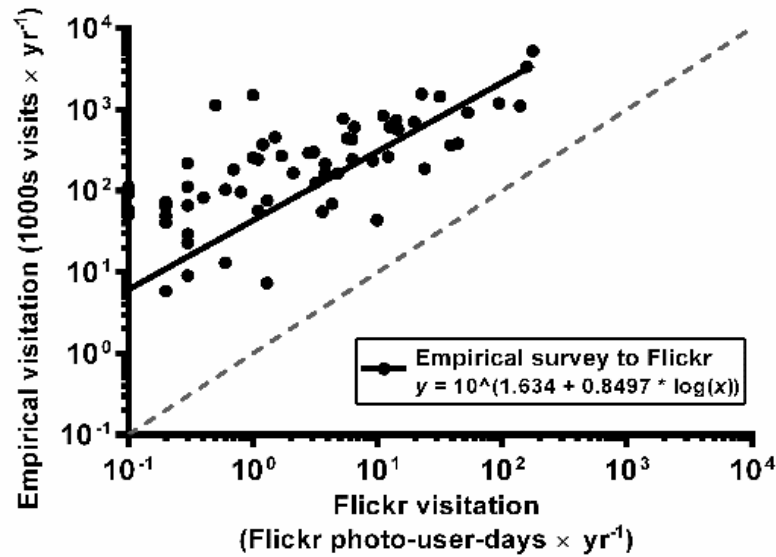

annual average PUD

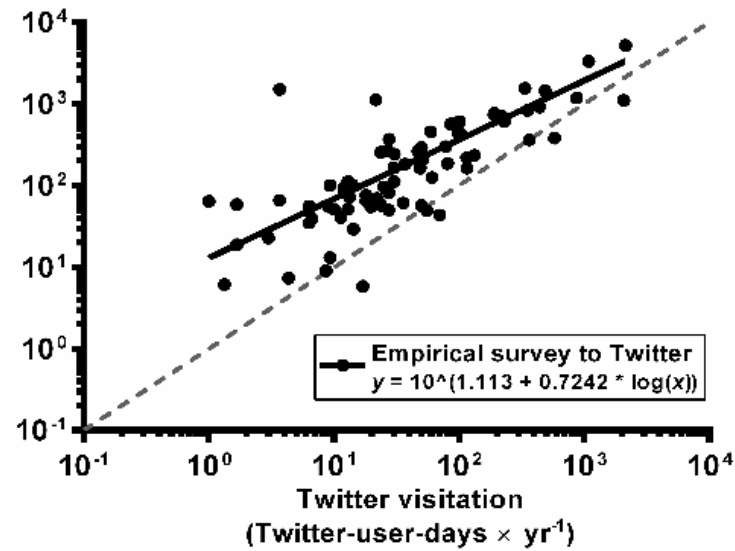

SMD validation uses subset of park features (n = 76 parks)

survey : PUD

R² = 0.67

survey : TUD

R² = 0.64

PUD : TUD

R² = 0.90

n = 76 parks for all regressions

RQ3: What characteristics affect variation in visitation across urban parks?

An aerial photograph of a city park. The park features a large, open green field in the center, surrounded by a paved path. There are several trees scattered throughout the park, and a few people can be seen walking on the path. In the background, there are several multi-story urban buildings with many windows. The overall scene is a mix of green space and urban development.

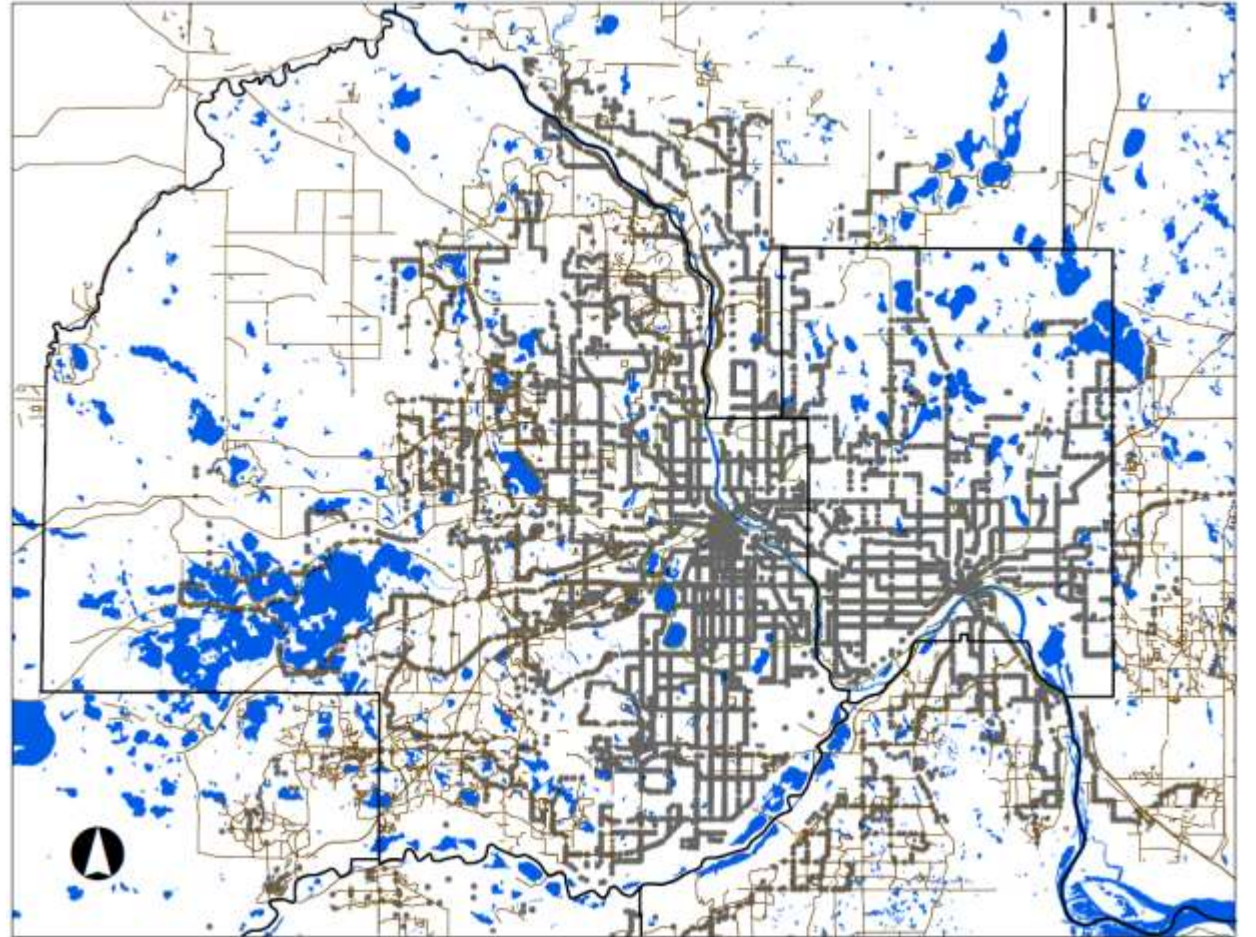

Proposed Regression Model

SMD Visitation Rates (PUD or TUD) =

**Function (Park Characteristics, Park
Facilities, Accessibility,
Neighborhood Characteristics)**

Predictors of Visitation

MetCouncil: waterbodies,
bikeways, regional trails, bus stops

Predictors of Visitation

MetCouncil: waterbodies,
bikeways, regional trails, bus stops

**UMN USpatial & Remote Sensing
Lab:** 1m land cover (e.g., turf
grass, imperviousness)

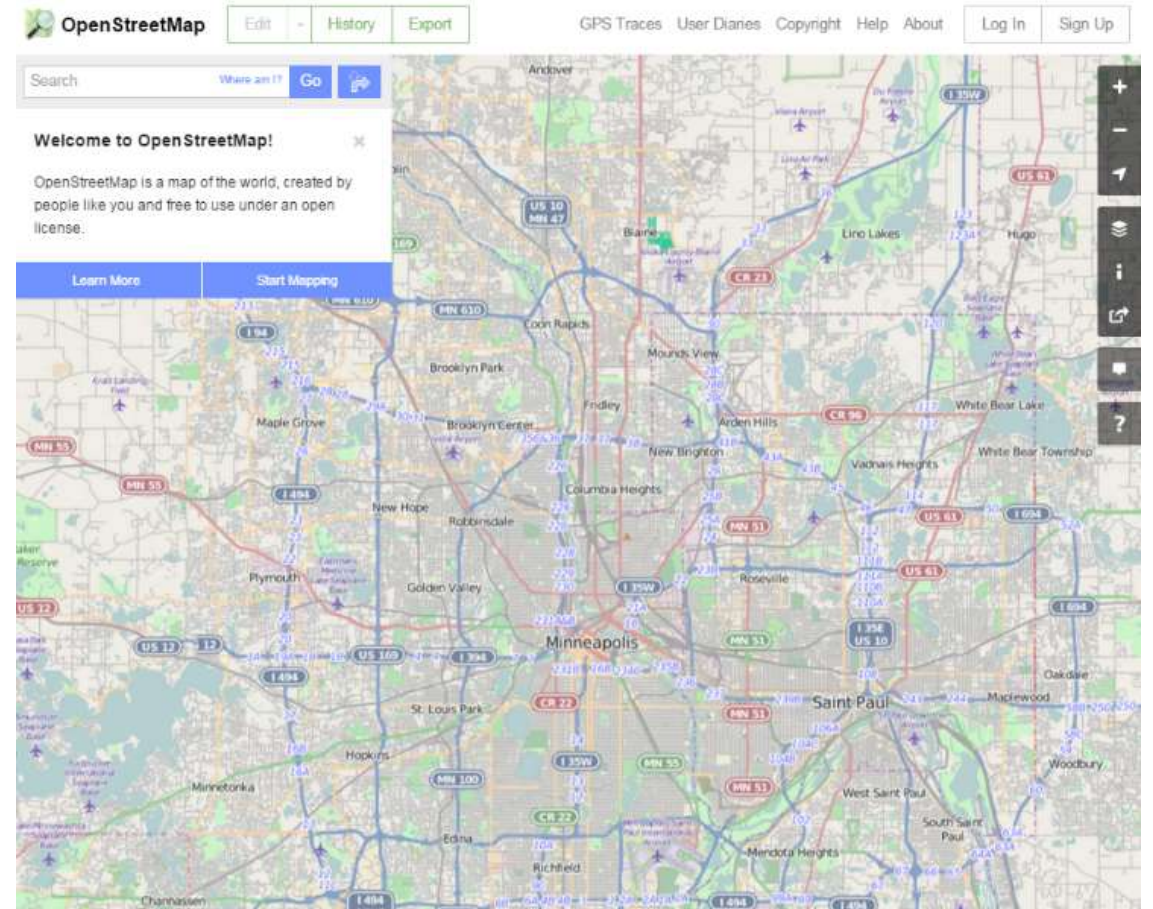

Predictors of Visitation

MetCouncil: waterbodies, bikeways, regional trails, bus stops

UMN USpatial & Remote Sensing Lab: 1m land cover (e.g., turf grass, imperviousness)

Openstreetmap.org: sport facilities, park infrastructure (e.g. beaches, playgrounds, toilets)

Predictors of Visitation

MetCouncil: waterbodies, bikeways, regional trails, bus stops

UMN USpatial & Remote Sensing Lab: 1m land cover (e.g., turf grass, imperviousness)

Openstreetmap.org: sport facilities, park infrastructure (e.g. beaches, playgrounds, toilets)

U.S. Census: Large Roads, 2008-2012 ACS block group population and demographics

Preliminary Results

Neg. Binomial Regressions for Count Data

	PUDnonzero (n = 772 parks)			TUDnonzero (n = 1418 parks)		
	Est.	P	Sign	Est.	P	Sign
Park size (100m²)	0.000024	***	+	0.00012	***	+
Water feature (presence)	1.27	***	+	0.44	***	+
% Park LC in Managed Turf Grass	2.80			15.2	***	+
Sport Fields and Courts (presence)	-0.05			0.82	***	+
Non-sport Facilities¹ (presence)	0.42	***	+	-0.12		
Regional trail length (100m)	0.02	***	+	0.025	***	+
Large roads (count)	0.08	***	+	0.08	***	+
Pop density (people/100m²)	5.36	***	+	2.50	***	+
¹ Includes beaches, boat launches, dog parks, playgrounds, shelters, toilets, etc.
