Characterizing recreation benefits

What activities occur?

How many people do them?

How much do they value their experiences?

Need for recreation value estimates

1. Renewable Resources Planning Act requirements;
2. Presidents 2015 memorandum directing federal agencies to consider ecosystem services values;
3. Report to Congress and the public about the services and benefits of National Forest management;
4. Continue to provide resource for other agencies, organizations, and private entities to develop recreation benefit estimates.

Recreation Use Values Database

Rosenberger and Loomis (2001): 163 studies conducted 1969 to 1998; 700 value estimates.

Loomis (2005): studies conducted 1969 to 2003; 1,239 value estimates.

★ Current update: 421 studies conducted 1958 to 2016; 3,194 value estimates. ★

Number of studies by year, N=421

Number of estimates by year

Frequency distribution of consumer surplus estimates

Number of estimates by primary activity

Mean consumer surplus per person per day by primary activity

Caveats and other considerations

1. These value estimates are average values, not marginal values.
 2. Value estimates are not suited for site-level analysis.
 3. Adjustments up or down of as much as 20% could be justified.
1. Value estimates do not indicate which activities are “best.”
