A Community on Ecosystem Services 2016
Jacksonville, FL - December 8, 2016

Outline

- Introduction and R2R2R
- City of Duluth revitalization and local context
- Volunteered Geographic Information
- St. Louis River Area of Concern and neighborhood
- Health Impact Assessments

Place-based R2R2R inquiry

- Remediation to Restoration to Revitalization
 - How does a community express the value of ecosystem services?
 - How can knowing what it values lead a community to R2R2R action?
- How can we get to community ecosystem services values?

Study site: St. Louis River Corridor

R2R2R Goals in the River Corridor:

- Remediation and restoration of the environment
- Community revitalization
- Enhance the quality of life
- Attract new homeowners
- Establish new visitor destination
- Stimulate appropriate development

We lack the means of:

- Community ecosystem service and input into R2R2R
- Measuring R2R2R outcomes in terms of betterment of human well-being

The Problem

- Contentious trail project in the City of Duluth
- Very vocal and knowledgeable neighbors
- Felt the City was not hearing their concerns

Key question

What do you want the City to know?

Volunteered Geographic Information

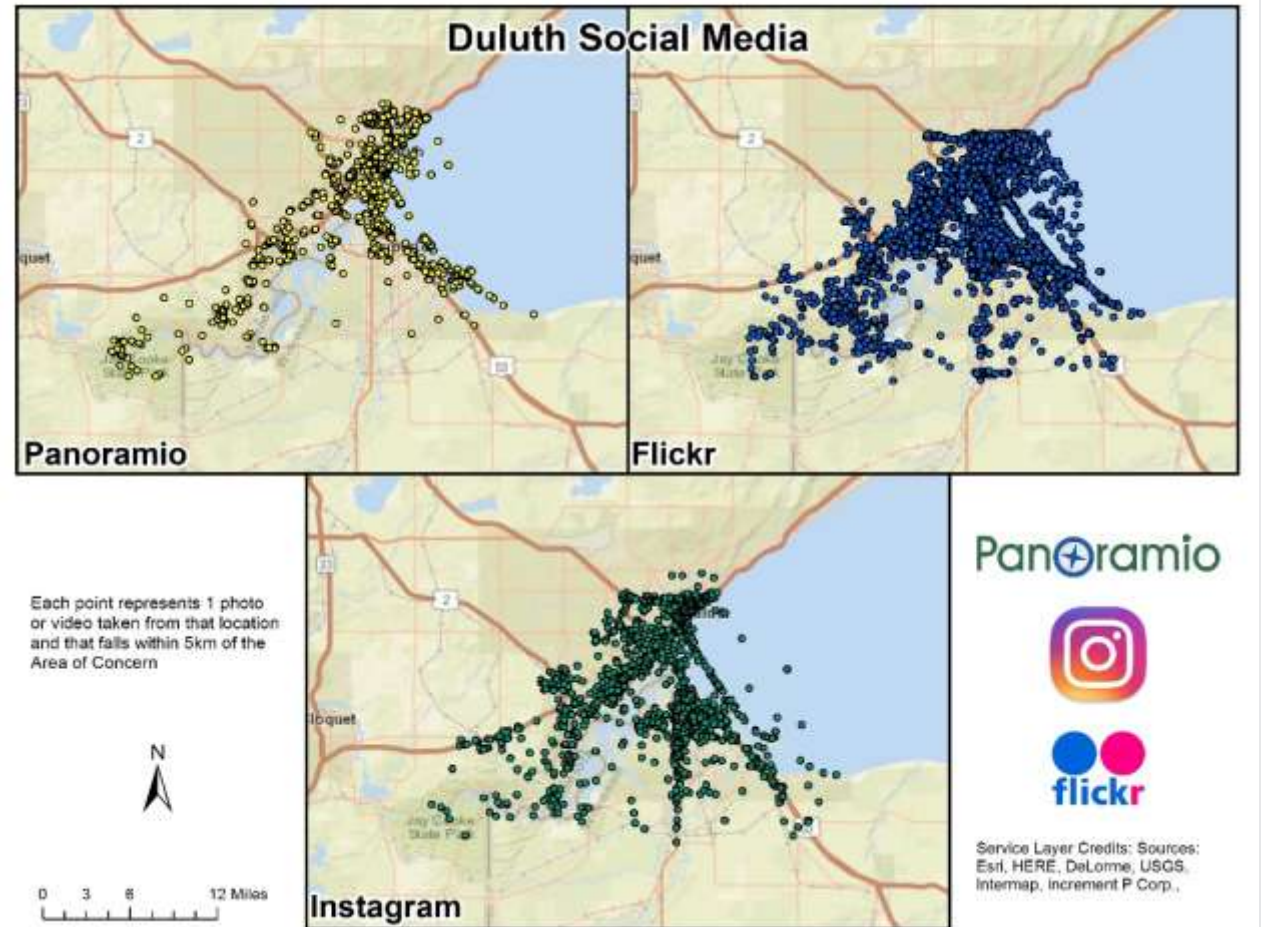

Crowdsourcing & Citizen Science

- Structured
- Often an app or website
- Involves training of the volunteers and execution of a protocol
- Allows for the collection of observations and opinions
- Can be more or less systematic

Social media

- Identify cultural, recreational, and aesthetic values through social media analysis (Allan et al., 2015; Keeler et al., 2015; Figueroa-Alfaro and Tang, 2016)
- Panoramio and/or Flickr
- Regional and state-wide studies

- Panoramio (2400)
 - Landscape
 - 9 years of data
- Flickr (31,000)
 - Landscape, but also people
 - 13 years of data
- Instagram (18,000)
 - More spontaneous
 - 5.5 years of data

What can you tell about a trail or amenity from photos?

Western Port Area Neighborhoods (WPAN)

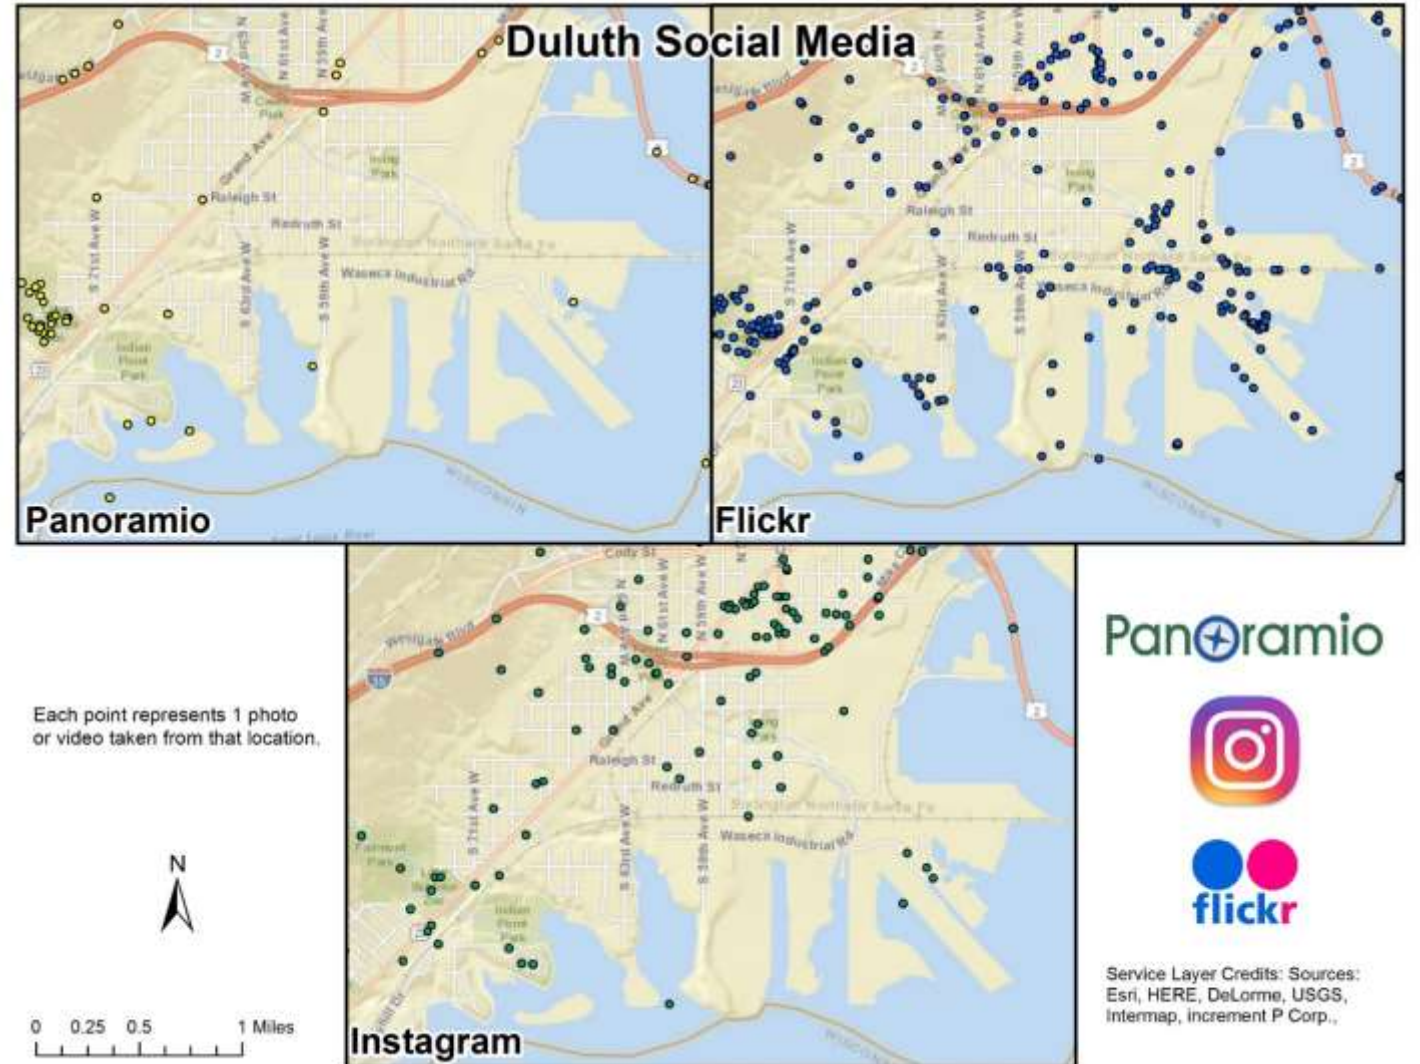

Initial results in WPAN

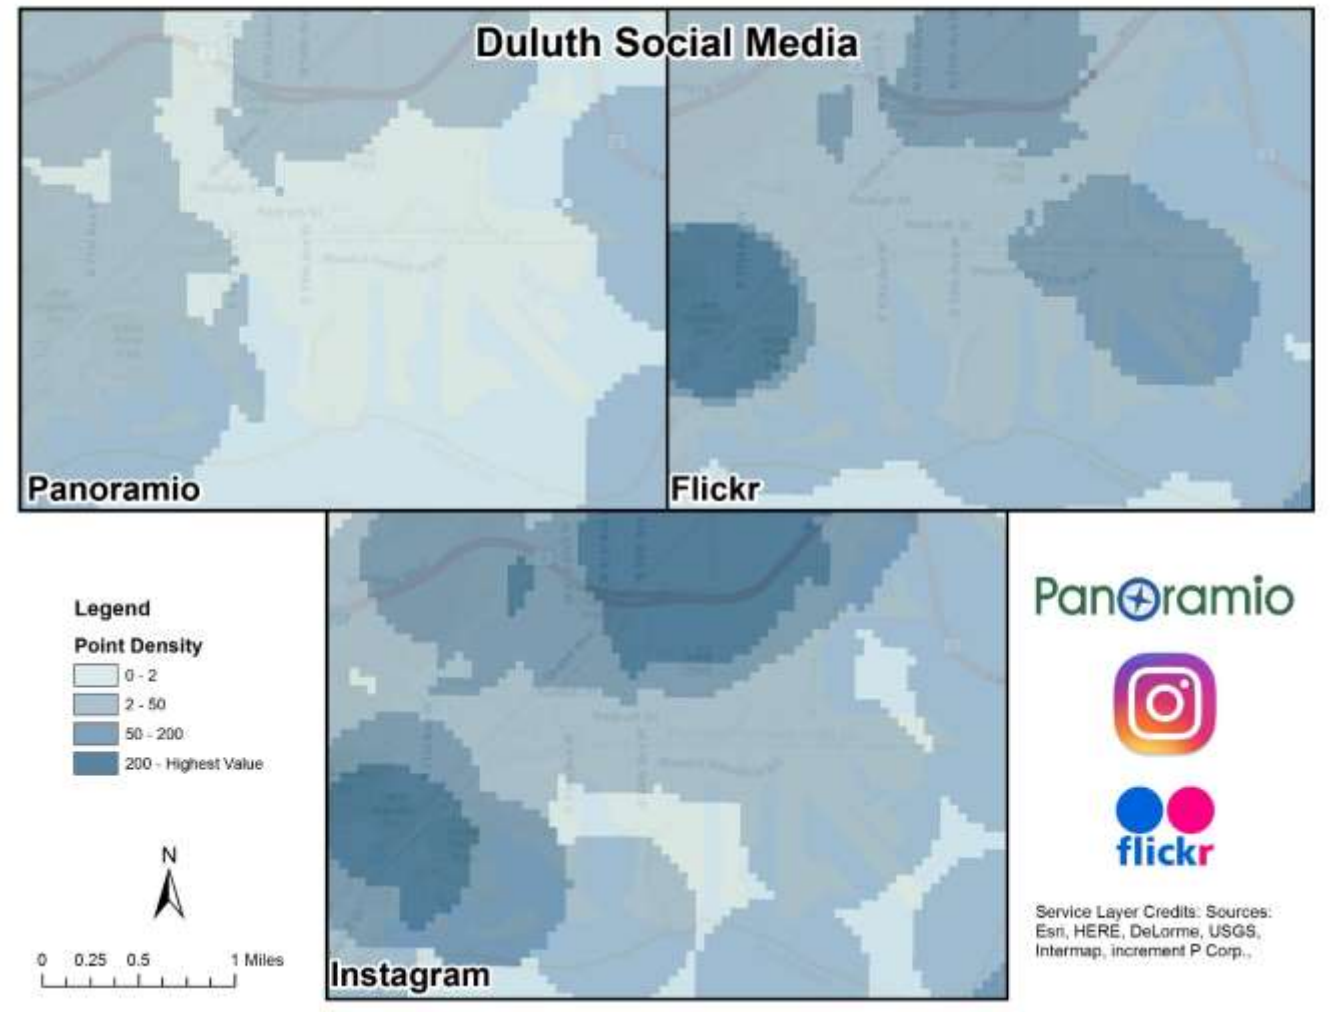

- Panoramio: 27 photos
- Flickr: 433 photos
- Instagram: 446 photos

The biggest cluster?
Lake Superior Zoo

Hotspots

- Zoo
- Keene Creek Dog Park
- Grassy Point
- Western Waterfront Trail
- Superior Hiking Trail
- Burlington Northern Tracks

More detailed look at results

- Almost all of the photos are taken outside, but not all in nature
- Landscape features are important part of photo even if not the subject

Analysis Questions

- Outside/in nature?
- If so, what kind?
- What seeing/doing?
- Is landscape part of photo?
- What parts of landscape/nature?

Examples

Decision application

- Health Impact Assessment
 - Ecosystem services to inform decision
- Grassy Point-Kingsbury Bay
 - Habitat restoration and park development
- Diverse participation
 - Federal and state agencies
 - Local government
 - Nonprofit organizations
 - Community groups
- Additional community value data
