# BACKGROUND: STUDY AREA

## WHAT ARE WETLANDS?

*“A **transitional** land between terrestrial and aquatic systems where the **water table** is usually at or near the surface, or land that is periodically covered by shallow water and which in normal circumstances support or would support **vegetation** that is typically adapted to **saturated soils**” (NWA, 1998).*

# RAMSAR DEFINITION OF A WETLAND

- Areas with water,
- natural or artificial, permanent or temporary, static or flowing,
- fresh, brackish or salty,
- areas of marine water not more than six meters at low tide. (RCS, 2010)

# THE HYDRO-GEOMORPHIC CLASSIFICATION OF WETLANDS

**Floodplain**

**Valley bottom  
with channel**

**Valley bottom  
without channel**

**Hillslope seepage  
linked to a stream**

**Isolated hillslope  
seepage**

**Depression  
(includes pans)**

# MANAGING WETLANDS FOR DRR & CCA IN EFS; SA

❖ Method (Mixed method; four data collection tools; SPSS and thematic analysis)

❖ Results:

## Perceived wetlands threats: Kendall's W Test (Ranks)

Threat	Mean Rank
Invasive alien species	6.19
Overgrazing	7.64 <sup>3rd</sup>
Uncontrolled fire	8.81 <sup>2nd</sup>
Lack of awareness on wetland benefits	8.94 <sup>1st</sup>
Soil erosion	6.96
Sedimentation	7.23
Pollution	6.12
Climate variability	5.65
Change in water regime	6.45
Conversion to other uses	5.87
Lack of human management capacity	6.70
Lack of material resources to manage	7.14

# ECOLOGICAL STATUS AS INDICATOR OF VULNERABILITY

- Excellent = More than 75%; Good = 65-75%; Average = 50-64%; Poor = Less than 50%

Wetland group		No	WL ID	Score/50	% score	Ecological Status
Communal		1	<u>Monontsha</u>	20	40	Poor
		2	Bethlehem	18	36	
		3	<u>Helbron</u>	24	48	
		4	Frankfort	23	46	
		5	<u>Petrus Steyn</u>	24	48	
		6	<u>Edenville</u>	22	44	
		7	<u>Clarens</u>	27	54	
Private	Protected Government	8	<u>Seekoeflei</u>	45	90	Excellent
		9	<u>Ingula</u>	40	80	
	Protected SANPARK	10	Golden Gate	39	78	Good
	Commercial Farms	11	SB 1	36	72	Good
		12	SB2	36	72	
		13	SB3	34	68	
		14	SB4	34	68	
		15	VR1	35	70	
		16	VR2	36	72	
		17	VR3	33	66	
		18	VR4	34	68	
		19	FB1	41	82	
		20	RT1	33	66	
	21	QQ1	31	62	Average	

## Key

Colour	Condition
Green	Excellent
Blue	Good
Yellow	Average
Red	Poor

# CLIMATE CHANGE AND WETLANDS

Question	Response	Percentage	No.	Reason	Freq
Do you think the climate in the FS has change?	N = 15 Yes = 15 No = 0 Not sure = 0	100% agreed	1	More frequent droughts episodes	6
			2	Warmer and shorter winters	3
			3	Changes in rainfall patterns	3
Do you think good management of wetlands can reduce the impacts of climate change	N =15 YES = 14 No = 1 Not sure =0	93.3% agreed and 6.7% disagree	4	Changes in weather patterns	2
			5	Increase in temperature	2
			6	Drier summer and reduced rainfall	2
			7	Fall in crop yield especially maize	2
			8	Weather extremes	1
			9	Political discussions	1
Do the local communities in the FS understand the value of wetlands	N =15 No = 14 Yes = 0 Not sure =1	93.3% disagree	10	Lower dam levels	1
			11	Heat waves	1
			12	Cold spells	1
			13	Floods	1

# WETLANDS ROLES IN MITIGATING AND ADAPTING TO CLIMATE CHANGE

Role of wetlands in mitigating climate change

■ carbon sink

■ Water provision

■ Ground water conservation

■ Ecosystem protection

■ Regulate stream flow

■ Increase food supply

# IDENTIFIED WETLANDS VALUES AND FUNCTIONS

Food	cultivated (using conservation agriculture) for taro, sugar cane, cabbages, onion. Most of these crops are cultivated by women
Grazing	Most for livestock and game; Fodder (winter/drought)
Fibre/Fuel	Fire wood/peat for burning; grasses for construction and artisanal craft
Biochemical	Medicinal plants cure or prevent diseases eg treat headache, urinary infection, ulcer, wounds, “Uklenya” for menstrual pain relieve or to expel the placenta after birth
Trade	Tourism, craft industries provide local livelihoods. WfWetlands for local employment

**Climate regulation**

Source/sink for greenhouse gases, influence local and regional temperature,

Natural hazard regulation

Flood control; Buffer for drought, Wild fire breaks

Biodiversity

Habitat for most pollinators, wetland birds, plants (Medicinal)

Spiritual and inspirational

Pools for baptism, spiritual powers

Educational

Research and training

# CONCLUSIONS AND RECOMMENDATIONS

- Much degradation especially in communal wetlands BUT
- Wetlands support Eco-DRR/CCA
- Contribute to climate change mitigation (absorb and store carbon).
- Mitigate disaster risks (Drought, flood, veldfires)
- Provide livelihood support to vulnerable communities to adapt and become more resilient to disaster risks and climate change
- No evidence of managing wetlands for CCA & DRR

T: 051 401 9111 [info@ufs.ac.za](mailto:info@ufs.ac.za) [www.ufs.ac.za](http://www.ufs.ac.za)

# RECOMMENDATIONS

- Better Management to build wetlands resilience
- Effective legal and institutional arrangement needed
- Promoting awareness, education and training on wetland functions and values critical
- Promoting climate-smart conservation of wetlands important
