NSRSM v2.1

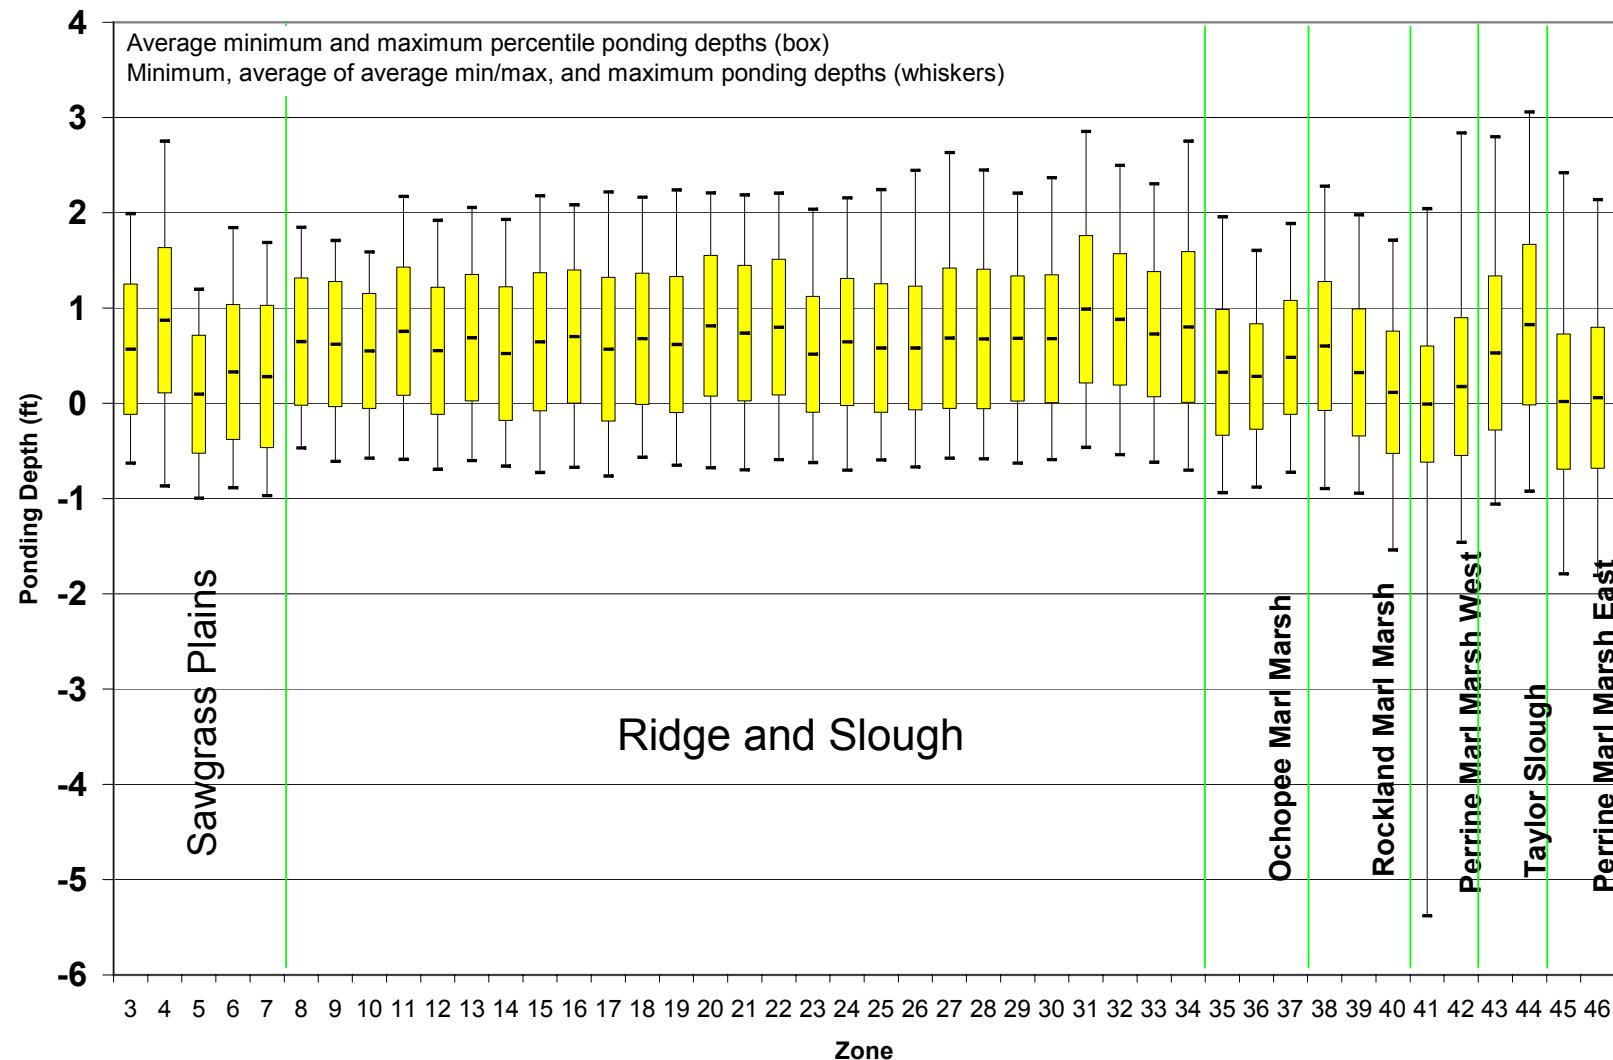

- 48,602 cells simulate natural system hydrology for an area of ~ 11,858 mi²
- Average cell size = .37 mi²
- Run Time for 1965-2000 POR = 3-5 hours depending on output options
- NSRSM v2.0 Peer reviewed 2007
- V2.1 revisions based on peer review comments
- Improved boundary conditions
- Improved upland performance
- Soft calibration in process
- Preliminary results are within documented reference ranges for pre-development system performance
