Mangrove Colonization Patterns

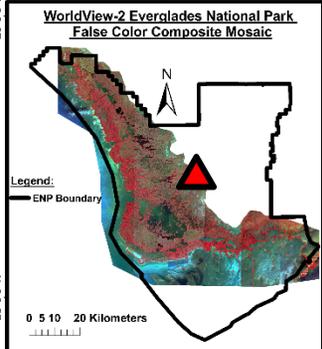

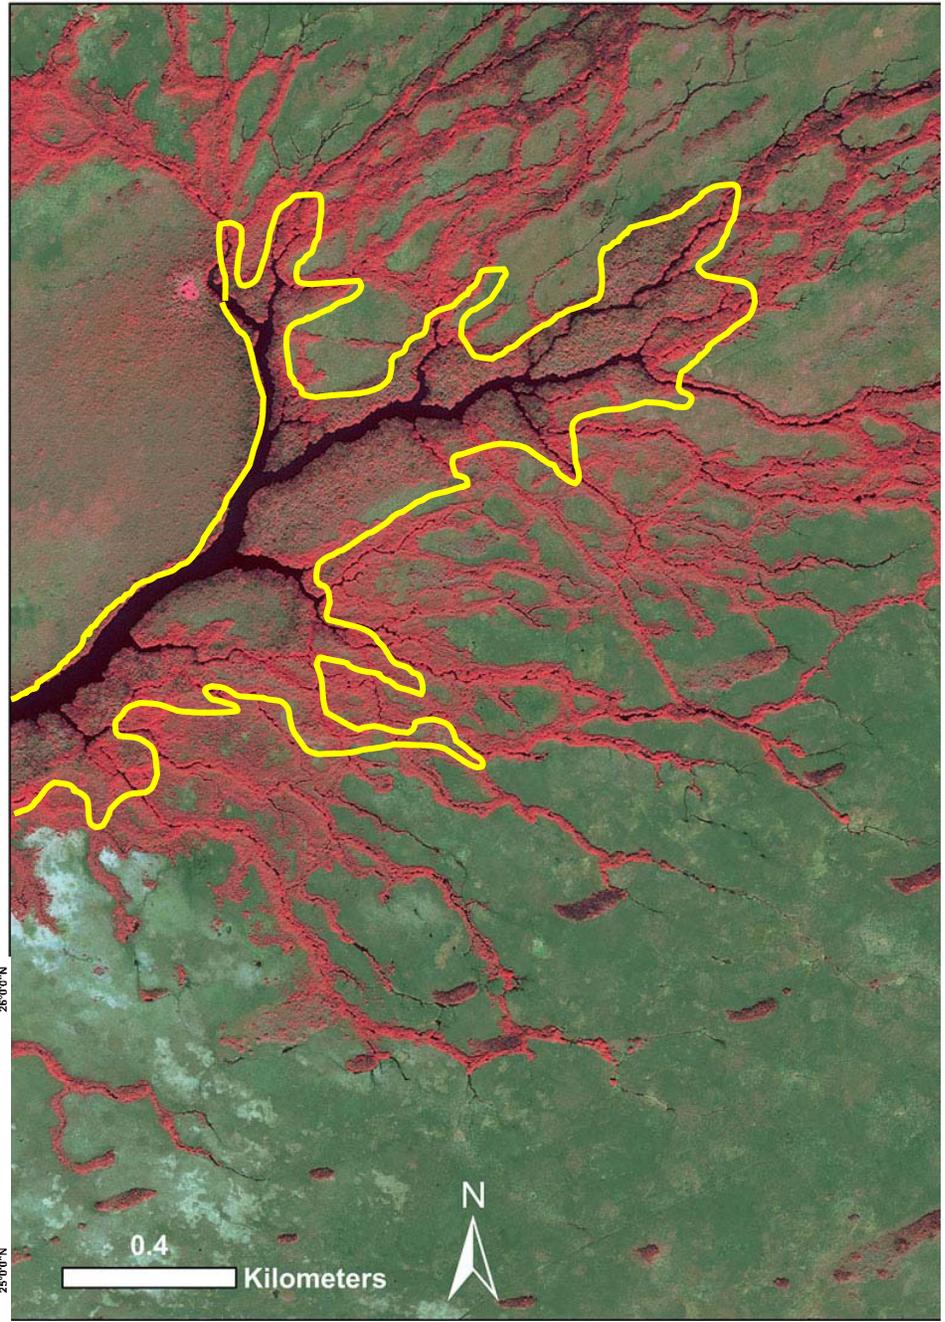

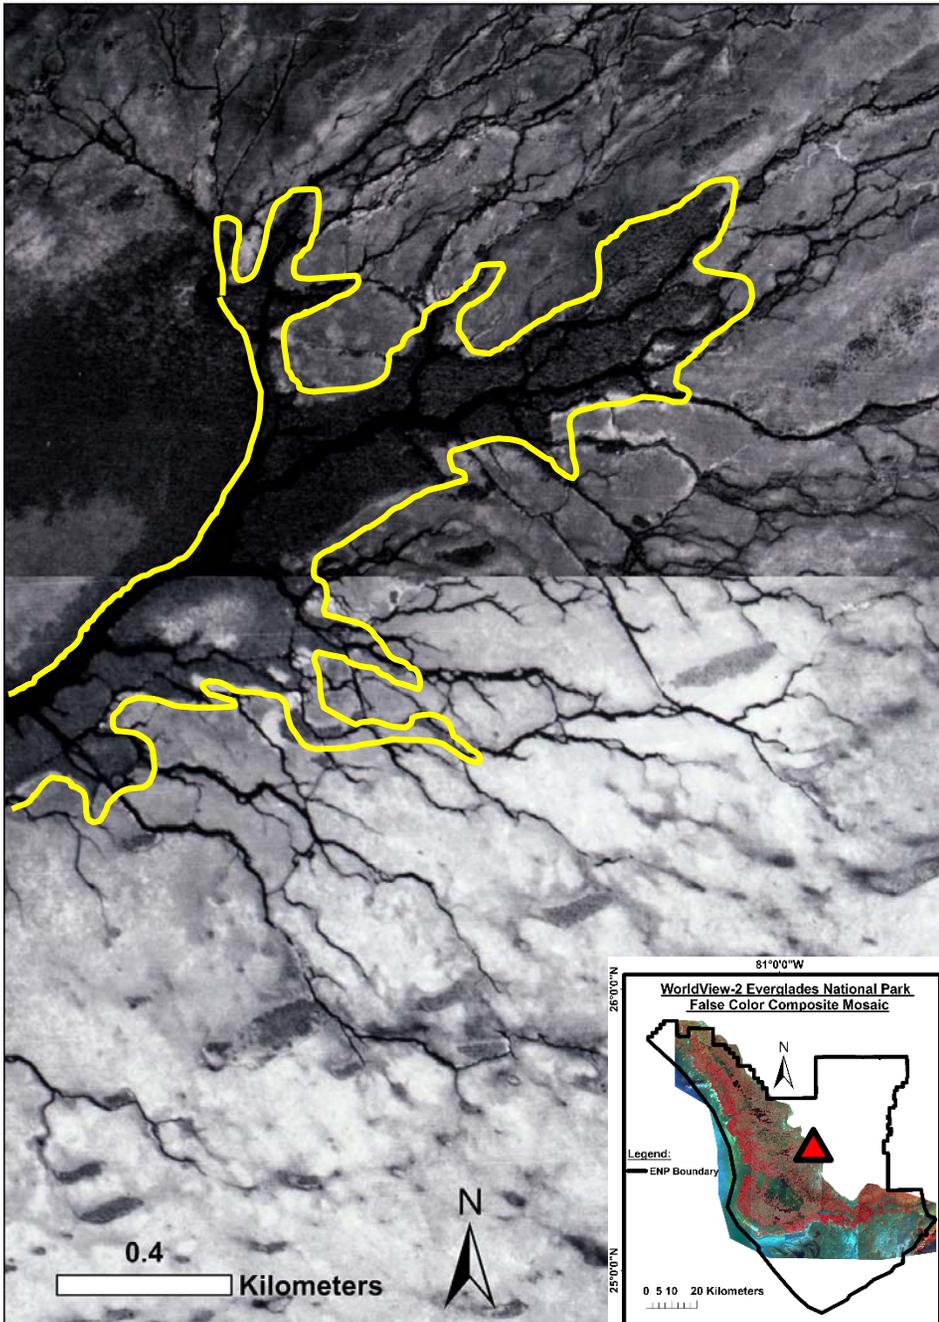

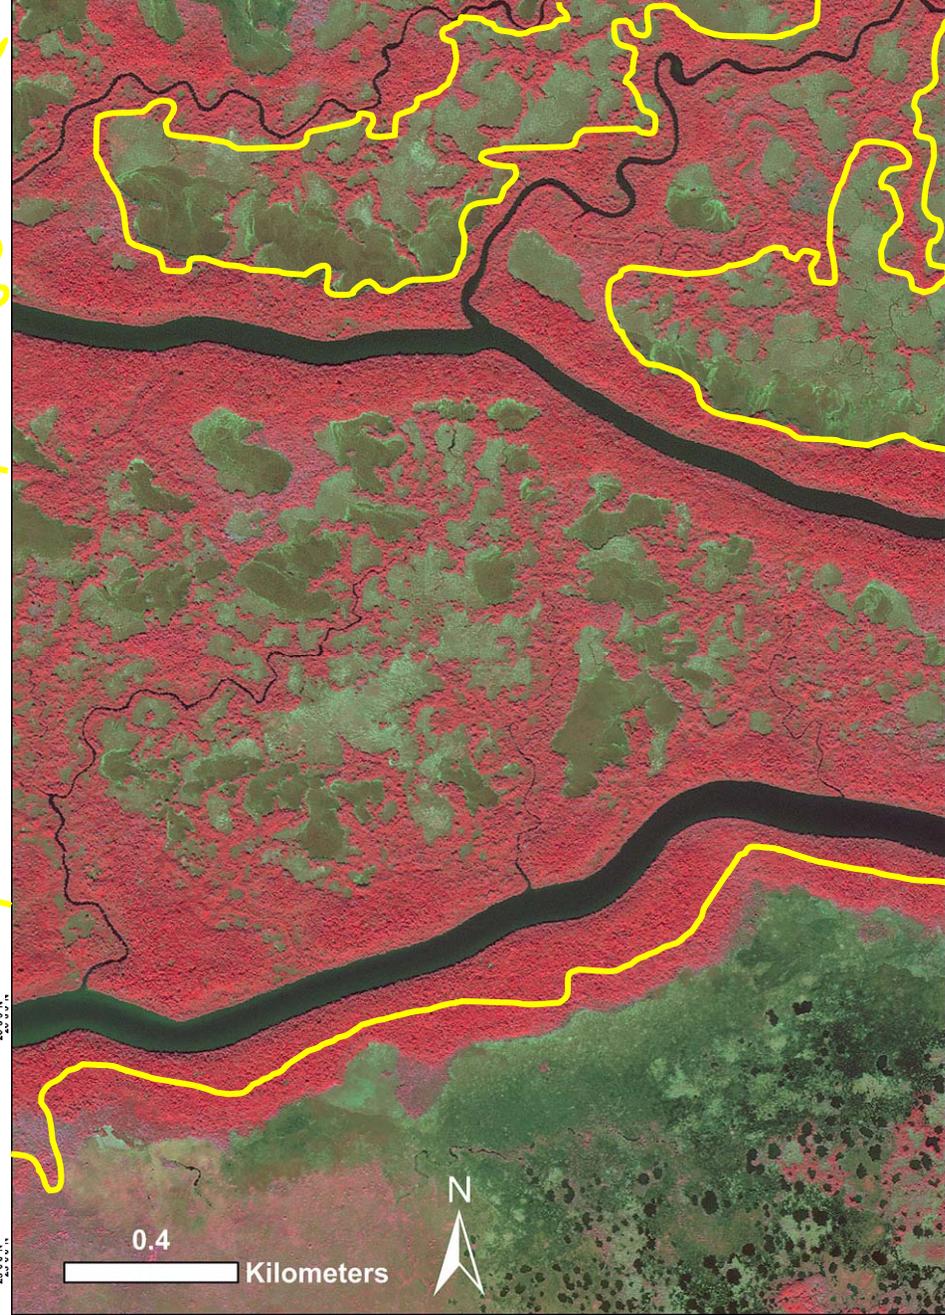

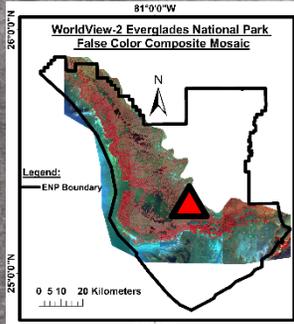

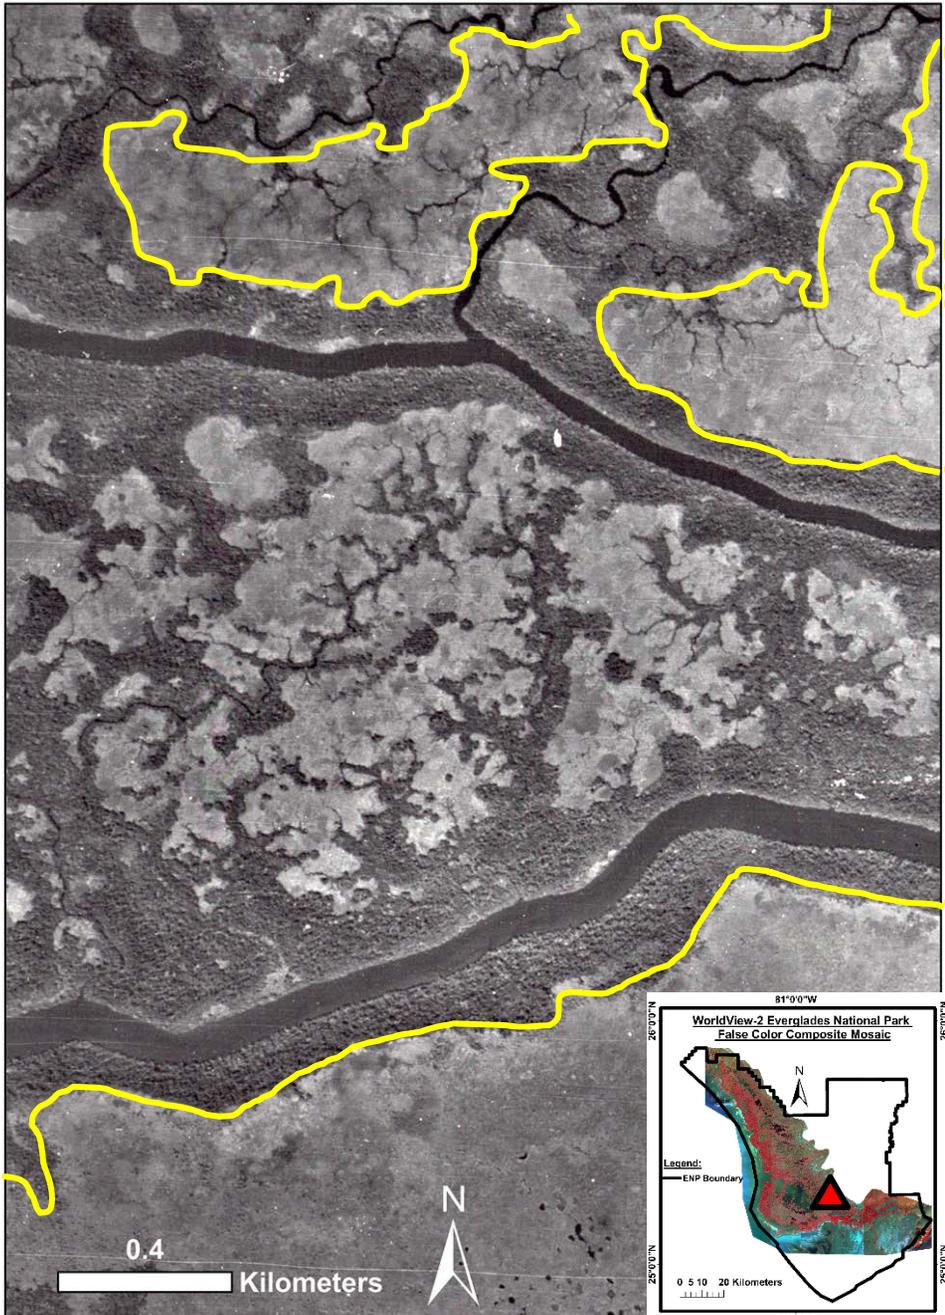

Estimating colonization rate

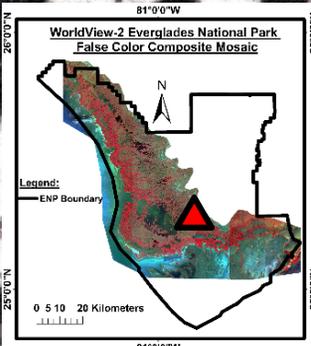

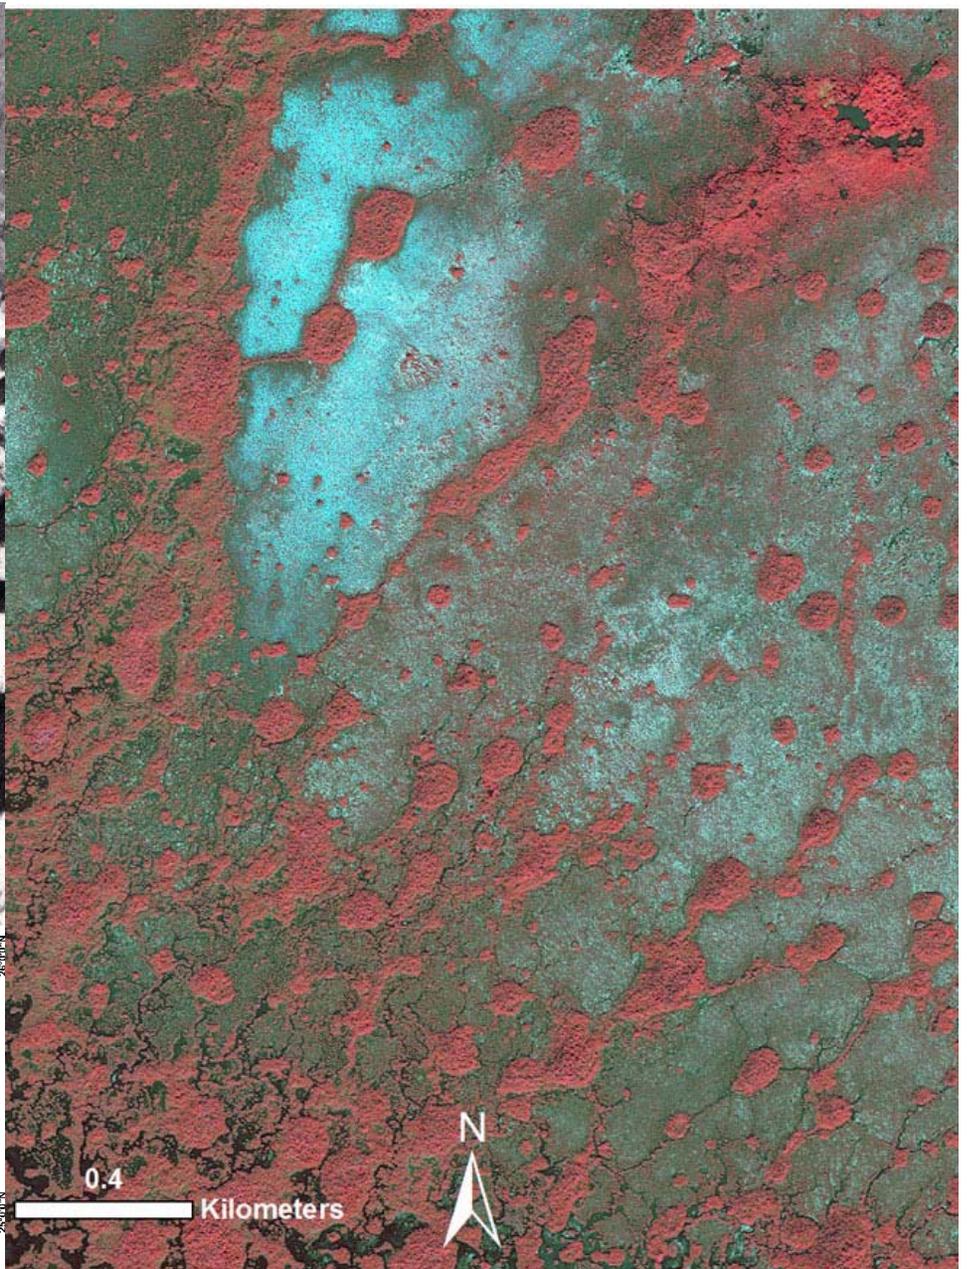

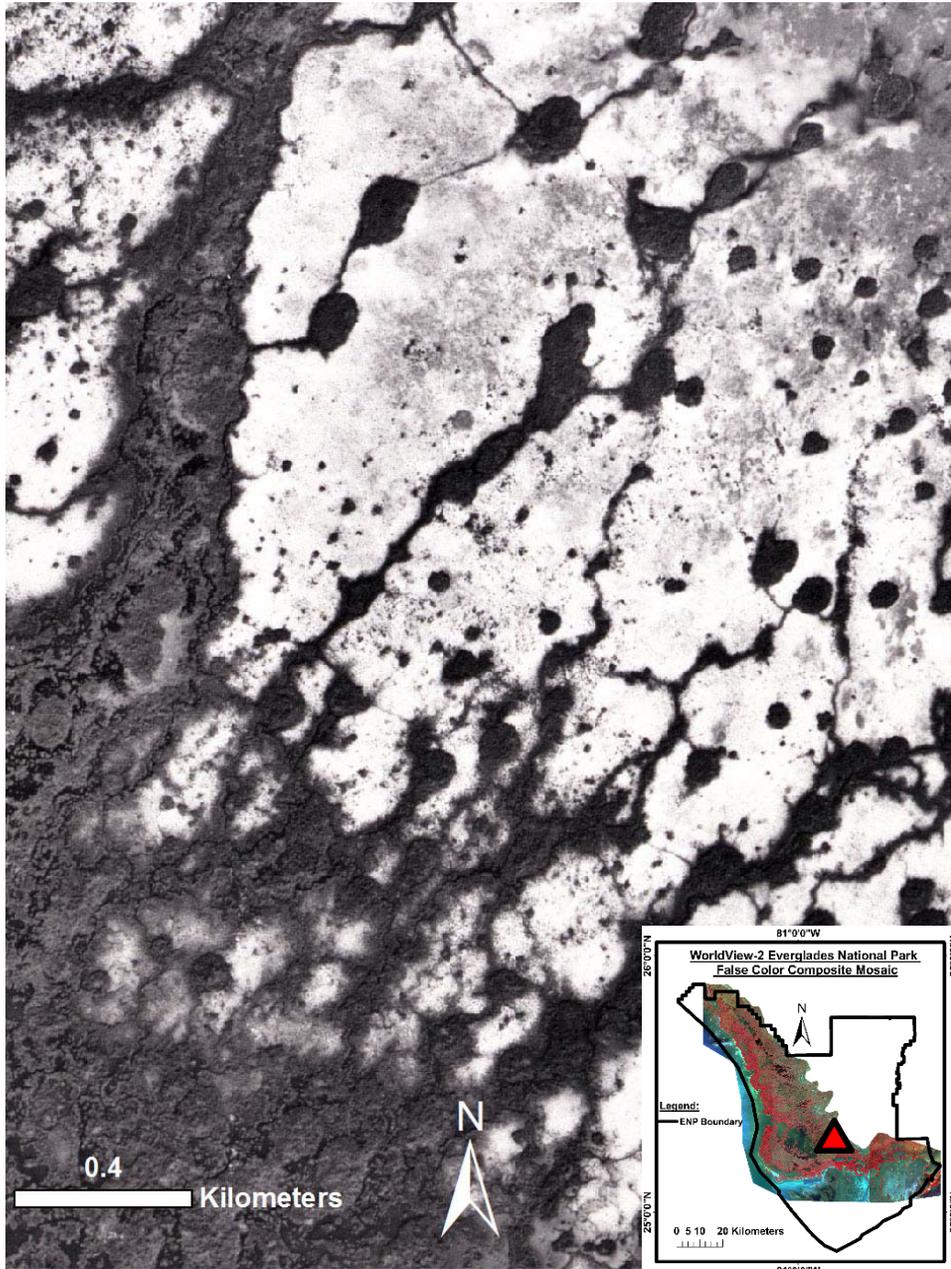

Remote sensing analysis: Comparison between

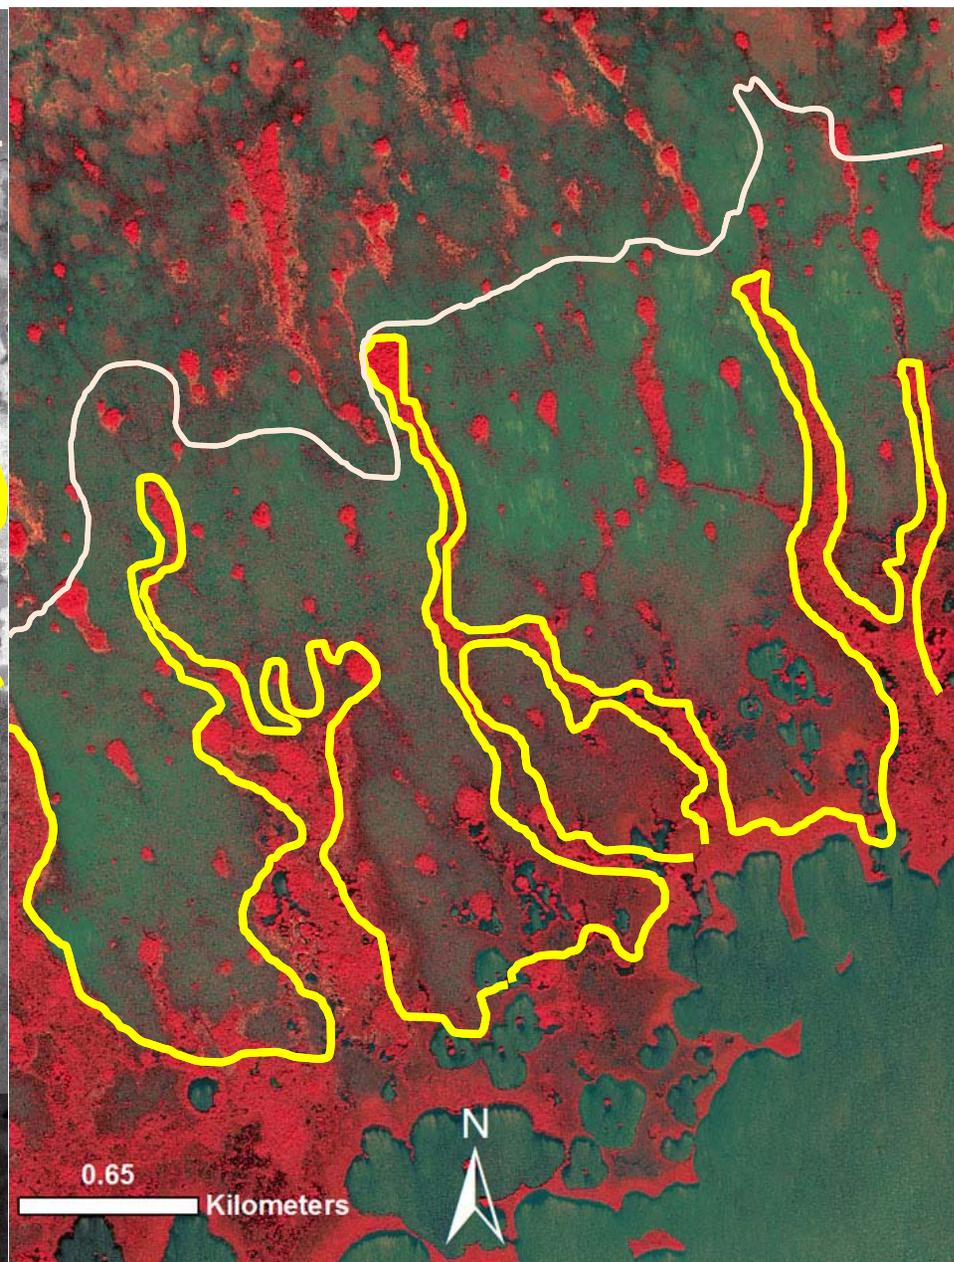

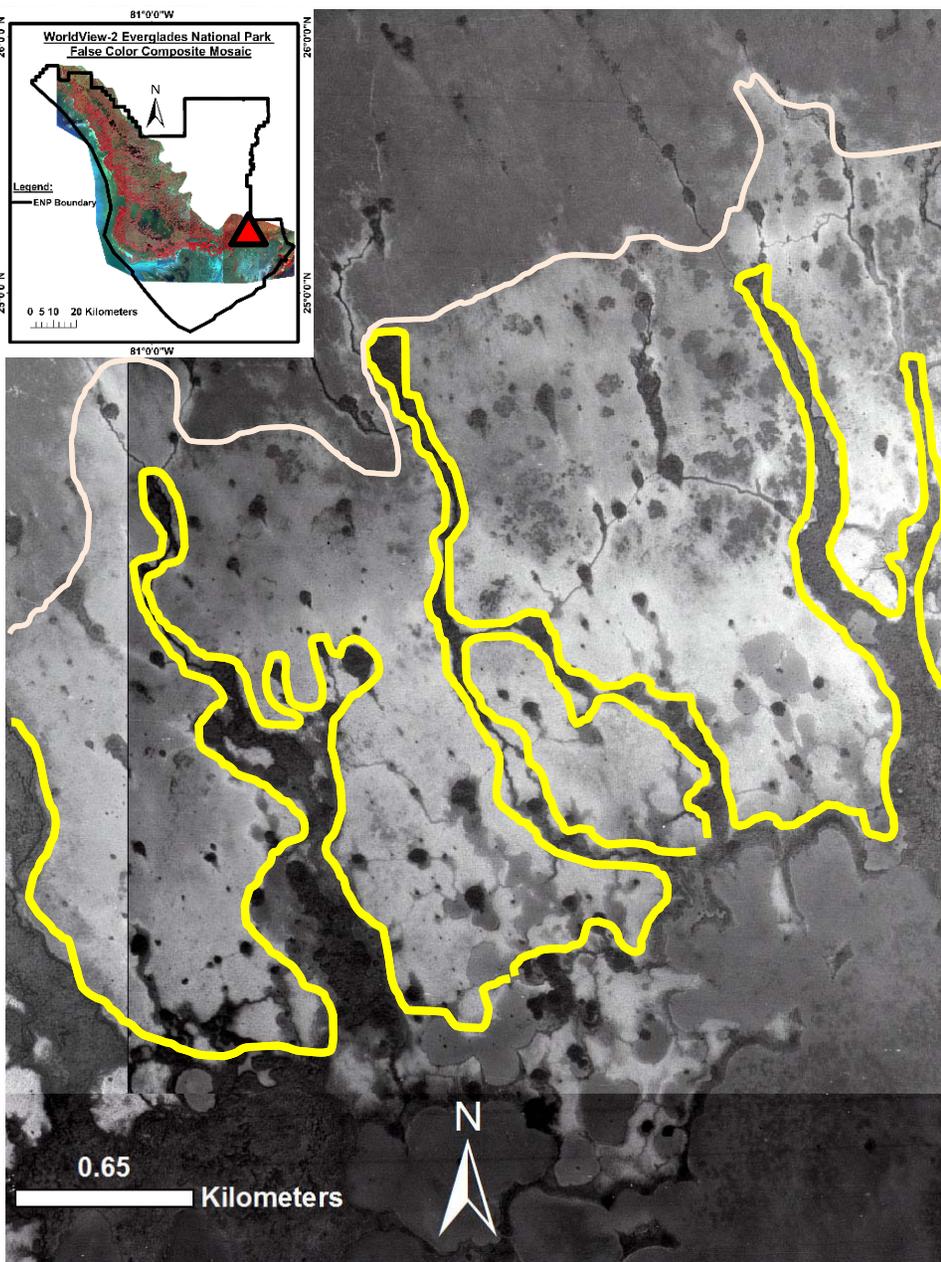

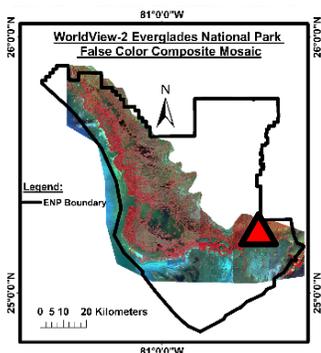

- 1940 Greater Everglades and South Florida Aerial Photoset (<http://sofia.usgs.gov/exchange/aerial-photos/>) - 2 m pixel resolution.
- 2015 WorldView-2 satellite imagery - 1.85 m pixel resolution. False color composite (bands - 7,5,3)

Summary

- **We identified three colonization patterns**
 - **Fingering**
 - **Continuous**
 - **Sporadic (“white” zone)**
- **The different patterns reflect the combined effect of:**
 - **Topography**
 - **Tidal channel propagation**
 - **Freshwater supply**
- **Colonization rate is estimated by comparing 1940 areal photoset with 2015 WorldView-2 imagery**
 - **Preliminary results indicate a maximum of 1.4 km of eastward expansion (1400 m/ 75 yrs ~ 20 m/yr).**
