

Calibration Activities for the South Florida Water Management Model (SFWMM a.k.a. 2x2 Model)

Jenifer Barnes

US Army Corps
of Engineers®
Jacksonville District

Introduction

The South Florida Water Management Model (SFWMM) is a regional-scale computer model that simulates the hydrology and management of the water resources system from Lake Okeechobee to Florida Bay, covering an area of 7,600 square miles. The model simulates the major components of the hydrologic cycle in south Florida on a daily basis. The SFWMM is currently being updated to simulate the 1965-2012 period.

Projects

- Operational Planning
- Comprehensive Everglades Restoration Plan
- Lower East Coast Water Supply Plans
- Boundary conditions for sub-regional models in multiple projects

Enhancements Since v5.4

- Dynamic Position Analysis
- Adaptive Protocols for Lake Okeechobee
- Levee seepage into the Everglades Agricultural Area
- Water supply backpumping to Lake Okeechobee improvements
- Land use estimates within Everglades Agricultural Area improved

Enhancements Since v5.4 (cont.)

- Modified Delta Storage calculation improvements
- Improvements to the Palm Beach County Chain of Lakes representation including the C-51 canal and Lake Worth Drainage District canals
- Enhancements in northern Palm Beach County for Loxahatchee River Restoration flexibility

Time Periods Modeled

- Calibration
 - 1991-2001
- Verification
 - 1984-1990
 - 2002-2010
- Simulation
 - 1965-2012

Linear Auto-Calibration with PEST

PEST is a parameter estimation tool developed by John Doherty at Watermark Numerical Computing

- Jacobian matrix
 - 56,692 historical observations
 - 474 parameters
- Objective function minimizes the difference between historical and simulated values

Stage Hydrographs
1991-2001 and 1984-2010

Final Refinements

- The calibration team is finalizing aquifer thickness measurements in the western portion of WCA-3A
- Everglades Agricultural Area demand and runoff historical measurements are being QA/QC'd and finalized

Customer Needs

Stakeholders in need of support for model boundary conditions or other data needs are encouraged to communicate with SFWMD staff. The Existing Condition Baseline will be completed along with the Calibration/Verification.
