Hurricane Irma

Maximum Storm Surge and Hurricane Position/ Intensity Map

Evidence of storm surge on Big Pine Key

Captions:

- a) Storm wrack in trees
- b) Red mangrove seedling in pine
- c) Storm wrack around wells
- d) Brown pine needles
- e) Marine marl in pineland

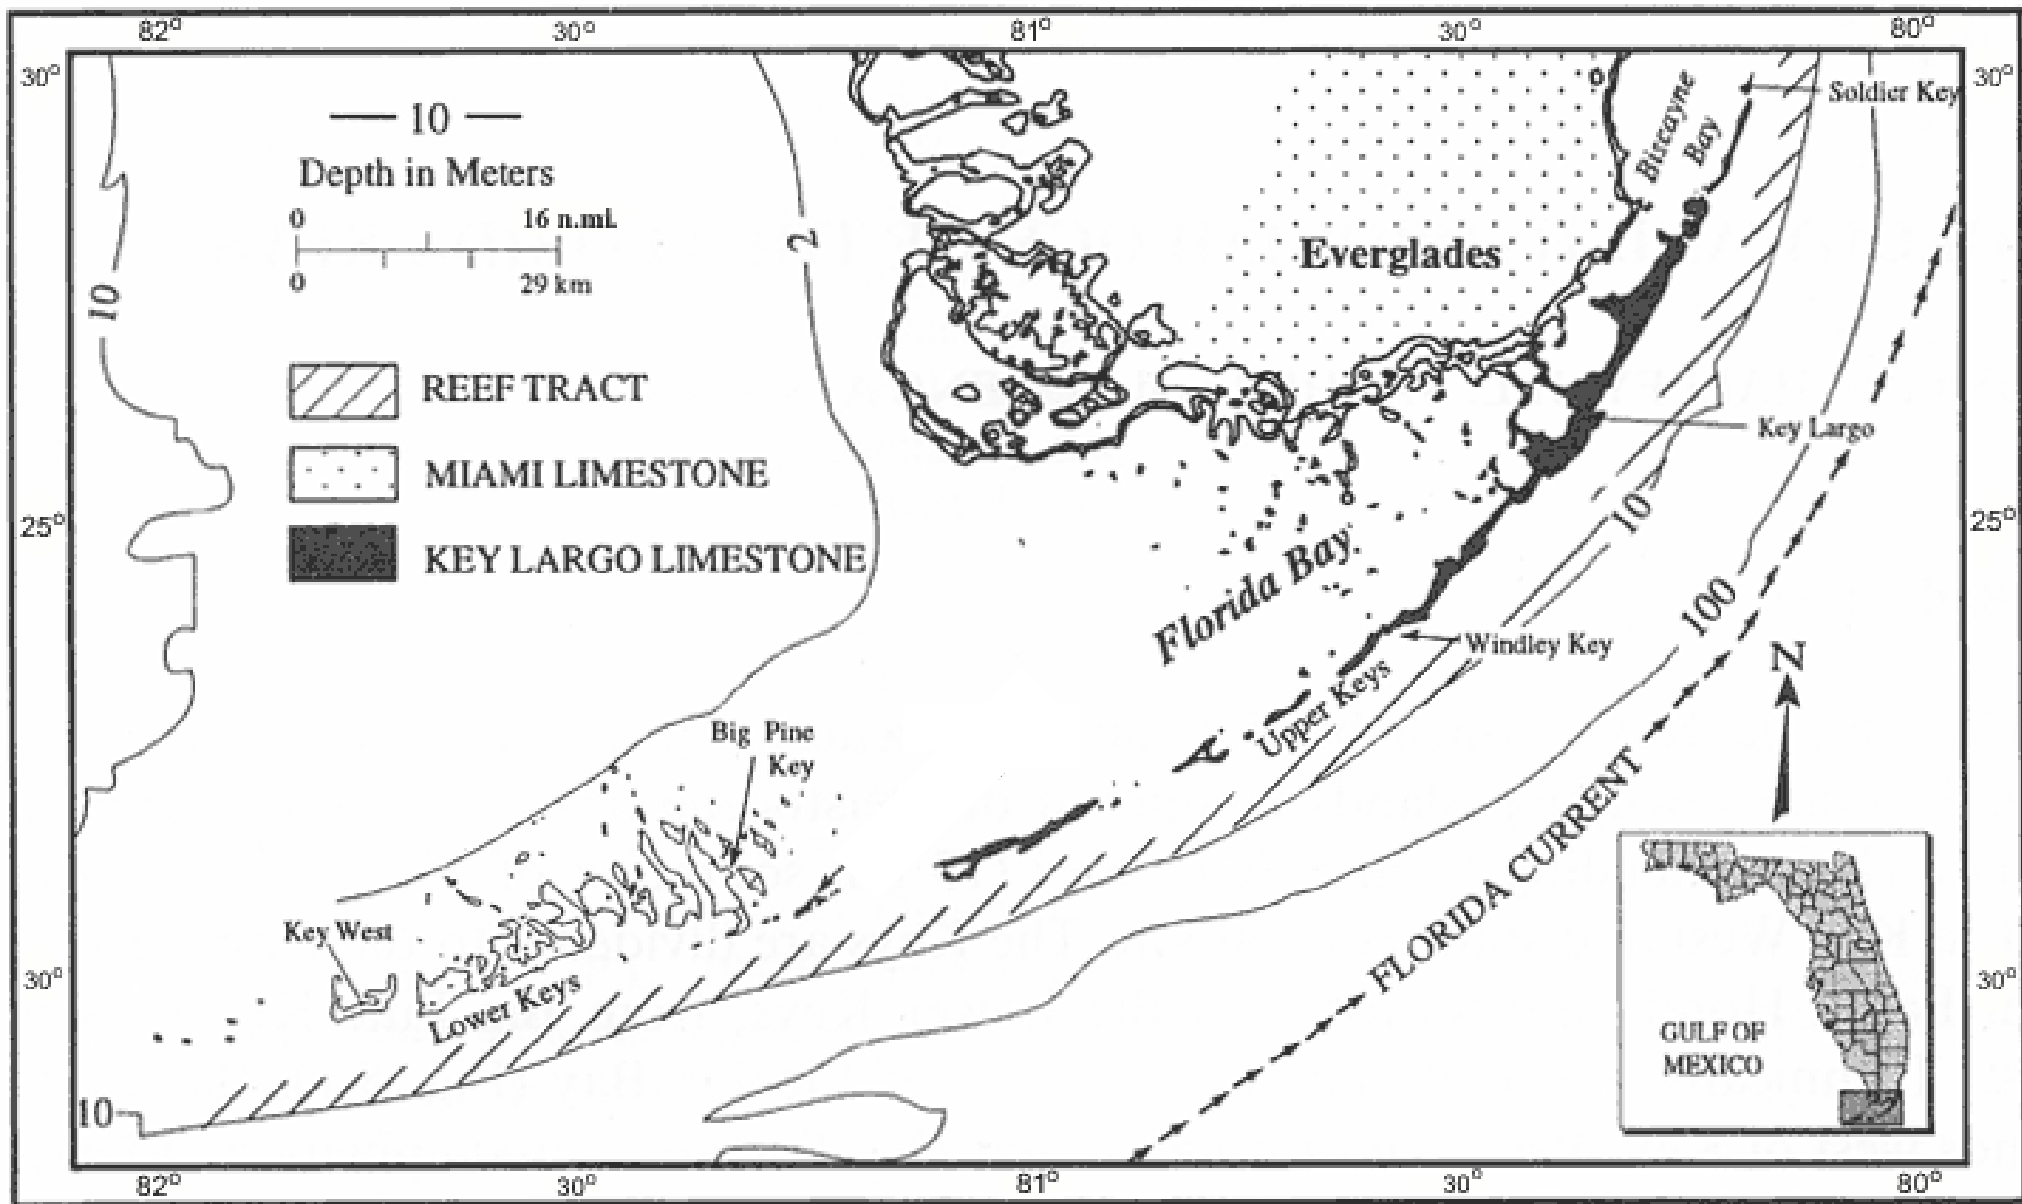

Fig. 5-1. Map showing the Florida Keys, their lithology, and location relative to mainland and reef tract. (Halley et al. 1993)

Storm surge impacts to island freshwater resources

How much time and rainfall are required for groundwater to return pre-surge conditions?

b) Post disturbance

Irma Track

Key West

Big Pine Key

Study Area: Big Pine Key

Monthly samples (2011 – 2012):

12 pre- and several post-Irma samples taken with YSI Model 30 handheld conductivity probe

June – December 2018:

7 Solinst Levellogger Edge LTC units were deployed in 6 groundwater & 1 surface water location

Loggers record at 30-minute intervals:

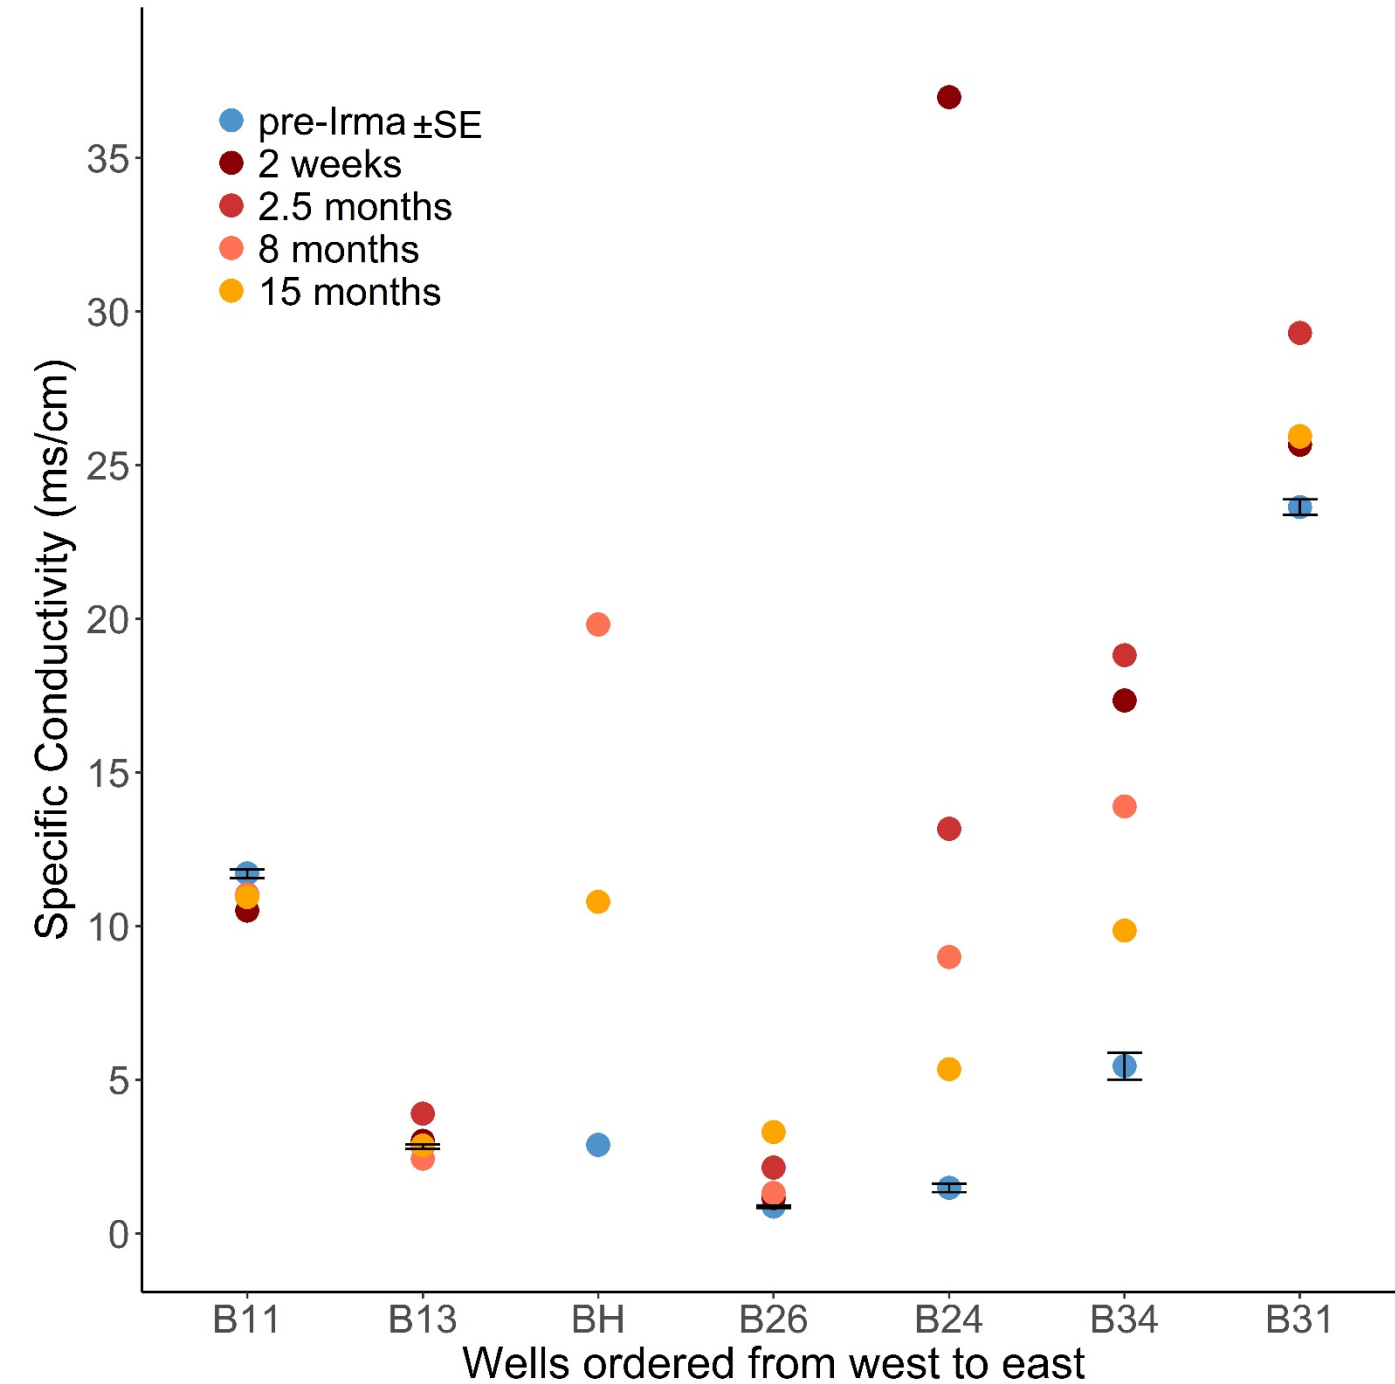

- Water level (meters)
- Temperature (°C)
- Conductivity (us/cm)

Climate Station (2007 to current):

- Hourly Precipitation (cm)
- Hourly Air Temperature & Solar Radiation
- Derived daily rainfall & potential evapotranspiration (PET)

Comparison of pre-post Irma specific conductivity

Blue Hole Surface Water Hourly Data (Jun 19 – Dec 17, 2018)

Climate Data (Jun 17 - Dec 17, 2018)

Groundwater Hourly Data (Jun 17 - Dec 17, 2018)

Groundwater Hourly Data (Jun 17 - Dec 17, 2018)

10 year Rainfall Record

Rainfall (mm)	During hurricane	Oct-Apr
Irma	320	220
Wilma	51	120

Marathon Airport 30 yr ave: 420 mm

Monthly Rainfall (Sept 2017 - Dec 2018)

Conclusions

- Salinization from storm surge impacts vary across the island of BPK
- Salts remain in soil for many months and are flushed into groundwater from heavy rain events, leading to temporary increases in conductivity
- Conductivity remains elevated above pre-Hurricane values for sites on the central and east side of the island
- Continued monitoring is required

A landscape photograph showing a field of tall, slender pine trees and scrub vegetation. The sky is bright blue with scattered white clouds. The foreground is filled with green grass and various shrubs, some of which appear to be recovering from damage. The overall scene suggests a natural area, possibly a refuge or reserve, after a disturbance like a hurricane.

Thank you!
