

Bovaer®

Cows and climate change

Looking after our farms and our planet

Cows provide the nutritious dairy products we know and love. And, more than that, they support the livelihoods and food security of over a billion people around the world.

Cows also generate methane, a greenhouse gas released into the atmosphere one burp at a time.

Now an innovative new feed supplement is able to reduce burped methane by ~30%.

Bovaer® gives the dairy products we thrive on a smaller footprint and less impact on the planet.

It's proof that by working together as farmers, researchers, consumers — and cows! — we can find solutions that are **farm wise and climate friendly.**

DSM is a global purpose-led, science-based company specializing in Nutrition, Health & Sustainable Living. Our purpose is to create brighter lives for all. We achieve it by using all the scientific and innovation power at our disposal to tackle some of the world's greatest challenges - creating value for customers, shareholders, our people, and society-at-large.
