Overview

The Project

**Sacramento River Bank Protection Project
(SRBPP)**

The Problem

Repair Erosion While Restoring Fish Habitat

The Tools

Modeling, Monitoring and 2D Fish Tracking

BUILDING STRONG®

Sacramento River Bank Protection Project (SRBPP) was authorized by the Flood Control Act of 1960 to protect existing levees from erosion.

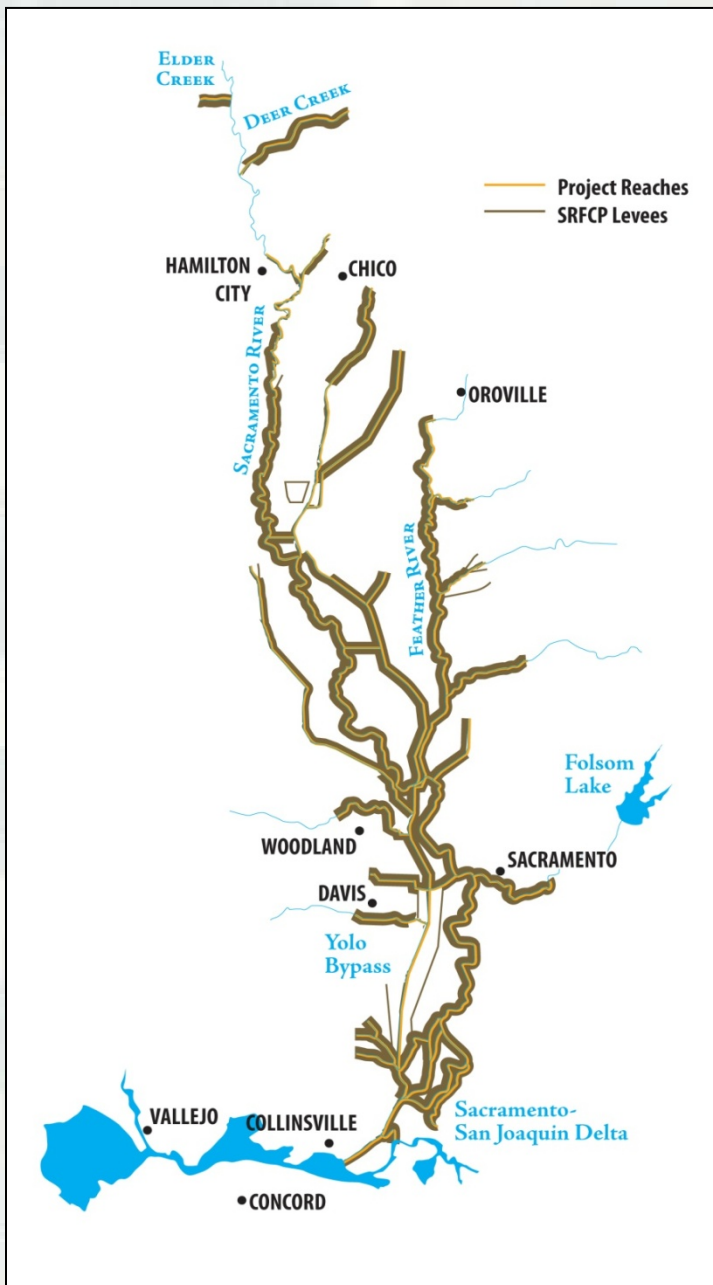

- ◆ **Original Authorization**
 - ◆ 440,000 linear feet
 - ◆ No mitigation

- ◆ **Reauthorization – 1974**
 - ◆ 405,000 linear feet
 - ◆ Mitigation authorized

- ◆ SRBPP covers 1000 miles of levees
- ◆ Sacramento River from river mile 0 to 194 + tributaries
- ◆ 840k linear ft. of bank protection
- ◆ 80k additional linear ft. authorized

2001 – NMFS/FWS issued draft JEOPARDY Biological Opinions (listed fish species)

◆ Winter-Run Chinook Salmon

◆ Spring-Run Chinook Salmon

◆ Central Valley Steelhead

◆ Green Sturgeon

◆ Delta Smelt

2004-Present – Bank protection designs incorporate habitat features to address impacts to habitat function and values for listed fish species (On-site mitigation)

Instream Woody Material

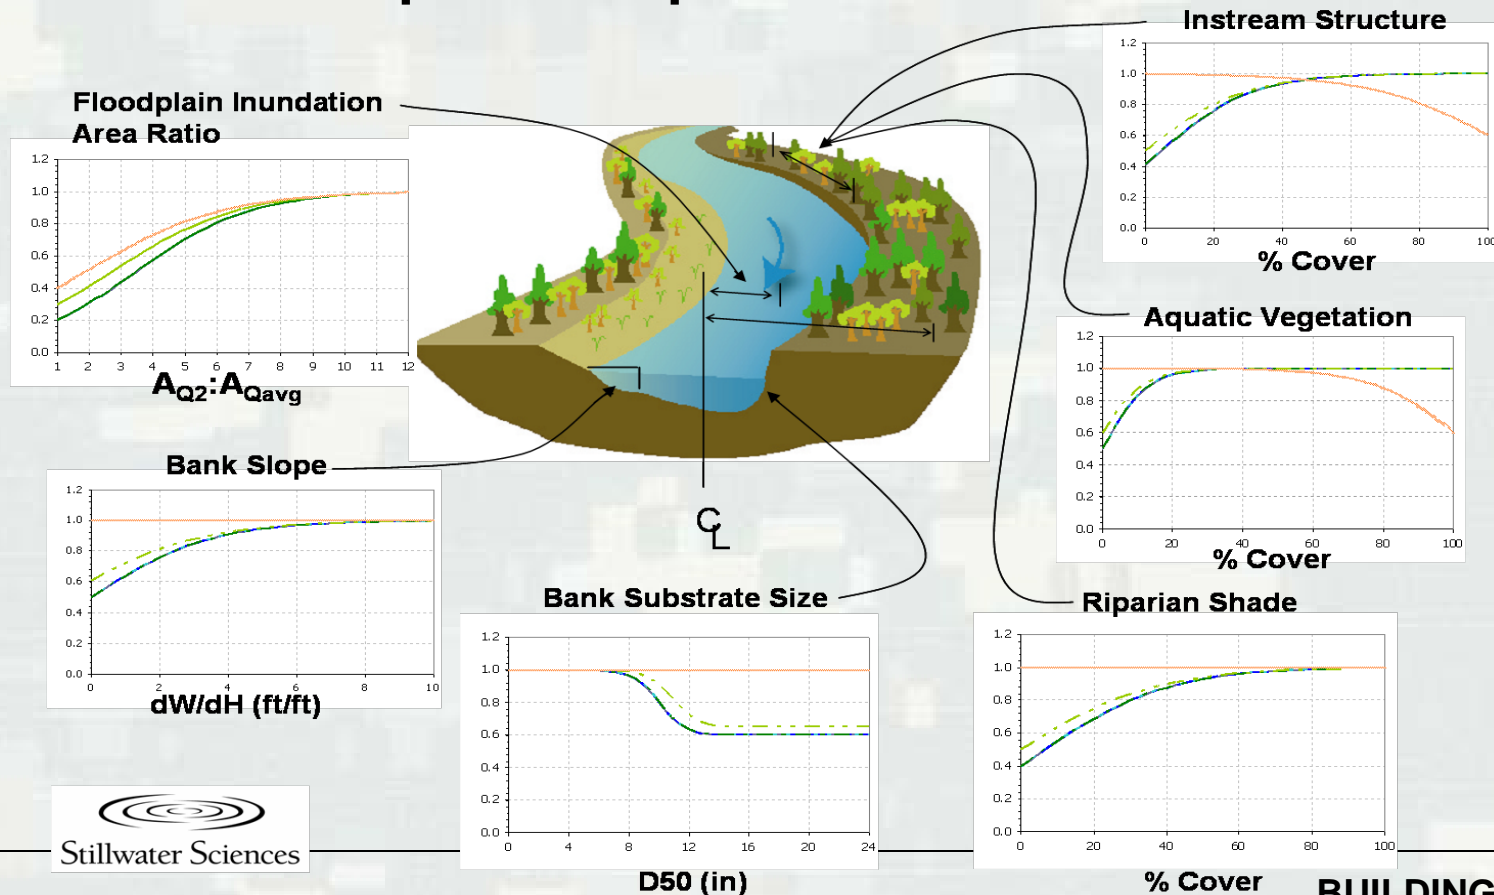

Floodplain Bench

The SAM model was developed with state and federal resource agencies to evaluate responses of focus fish species to habitat features affected by bank repairs over time (t = 0, 1, 5, 15, 25, and 50 years)

SAM Conceptual Response Models

Long-Term Aquatic Monitoring Plan

- ◆ Developed plan 2007
- ◆ Includes vegetation, IWM, trapping, electro-fishing and acoustic tagging
- ◆ ERDC – ELAM modeling studies feeding into long-term SAM refinement and cumulative analysis
- ◆ Bathymetry data
- ◆ Pilot 2-D acoustic tagging in 2010
- ◆ Expanded 2-D acoustic tagging in 2011

Eulerian-Lagrangian-Agent Method (ELAM)

- ◆ ELAM analyzes the movement behavior of animals in complex environments
- ◆ Applied to the movement of aquatic species using a numerical surrogate with hydraulic and/or water quality modeling

2-D ACOUSTIC TAGGING

- ◆ Need for better tracking of fish through target areas relative to habitat features
- ◆ Need to compare response to constructed features vs. natural
- ◆ Results used to calibrate ELAM
- ◆ ELAM can then be used to predict fish response and refine the SAM indices

2-D Study Site

Sacramento RM-85.6

Bathymetry

- ◆ **USGS characterized the riverbed, levees, and flow in the Sacramento River**
- ◆ **Acoustic Doppler Current Profiler (*ADCP*)**
- ◆ **Sidescan sonar**
- ◆ **[Movie](#)**

Range Test

Range Test Design

Test Mooring Design

2-D Tracking Test

2-D Tracking Test with GPS Overlay

Acoustic Equipment

**VEMCO-VR2W
Receivers**
- 180 khz
- 69 khz

**Bryte Yard
Custom
Mount
System**

**VEMCO V6
Fish Tags**
- 180 khz

Fish Tagging

Late Fall-run Chinook Size Range

Length: 100 – 190 mm FL

Weight: 11.5 – 70.9 g

Two Release Events

126 on January 13, 2011

124 on February 25, 2011

Proposed setup with 50 VR2Ws

High Flows

BUILDING STRONG®

Conceptual diagram of study site setup

Study Site

- ◆ 60 VR2W-180 kHz monitors
- ◆ 30 VR2W-69 kHz monitors
- ◆ 5 tilt sensors
- ◆ Upstream flow gauge: Colusa
- ◆ Fine-scale bathymetry data

Multiple Species

Sturgeon

Steelhead

Smallmouth

The Goal: Improve Erosion Repair Designs

Next Steps

- ◆ **Expand tracking efforts at several locations**
- ◆ **Tag smaller fish**
- ◆ **Time fish release when repair sites are inundated**
- ◆ **Predator-prey dynamics**
- ◆ **Test water quality**
- ◆ **Additional species (sturgeon, Delta smelt)**

Acknowledgments

- ◆ **CA Department of Water Resources**
- ◆ **U.S. Army Corps of Engineers**
- ◆ **SRBPP Interagency Working Group
(NMFS, USFWS, CDFG)**
- ◆ **Stillwater Sciences**
- ◆ **Environ International**
- ◆ **VEMCO**
