

Scolytinae

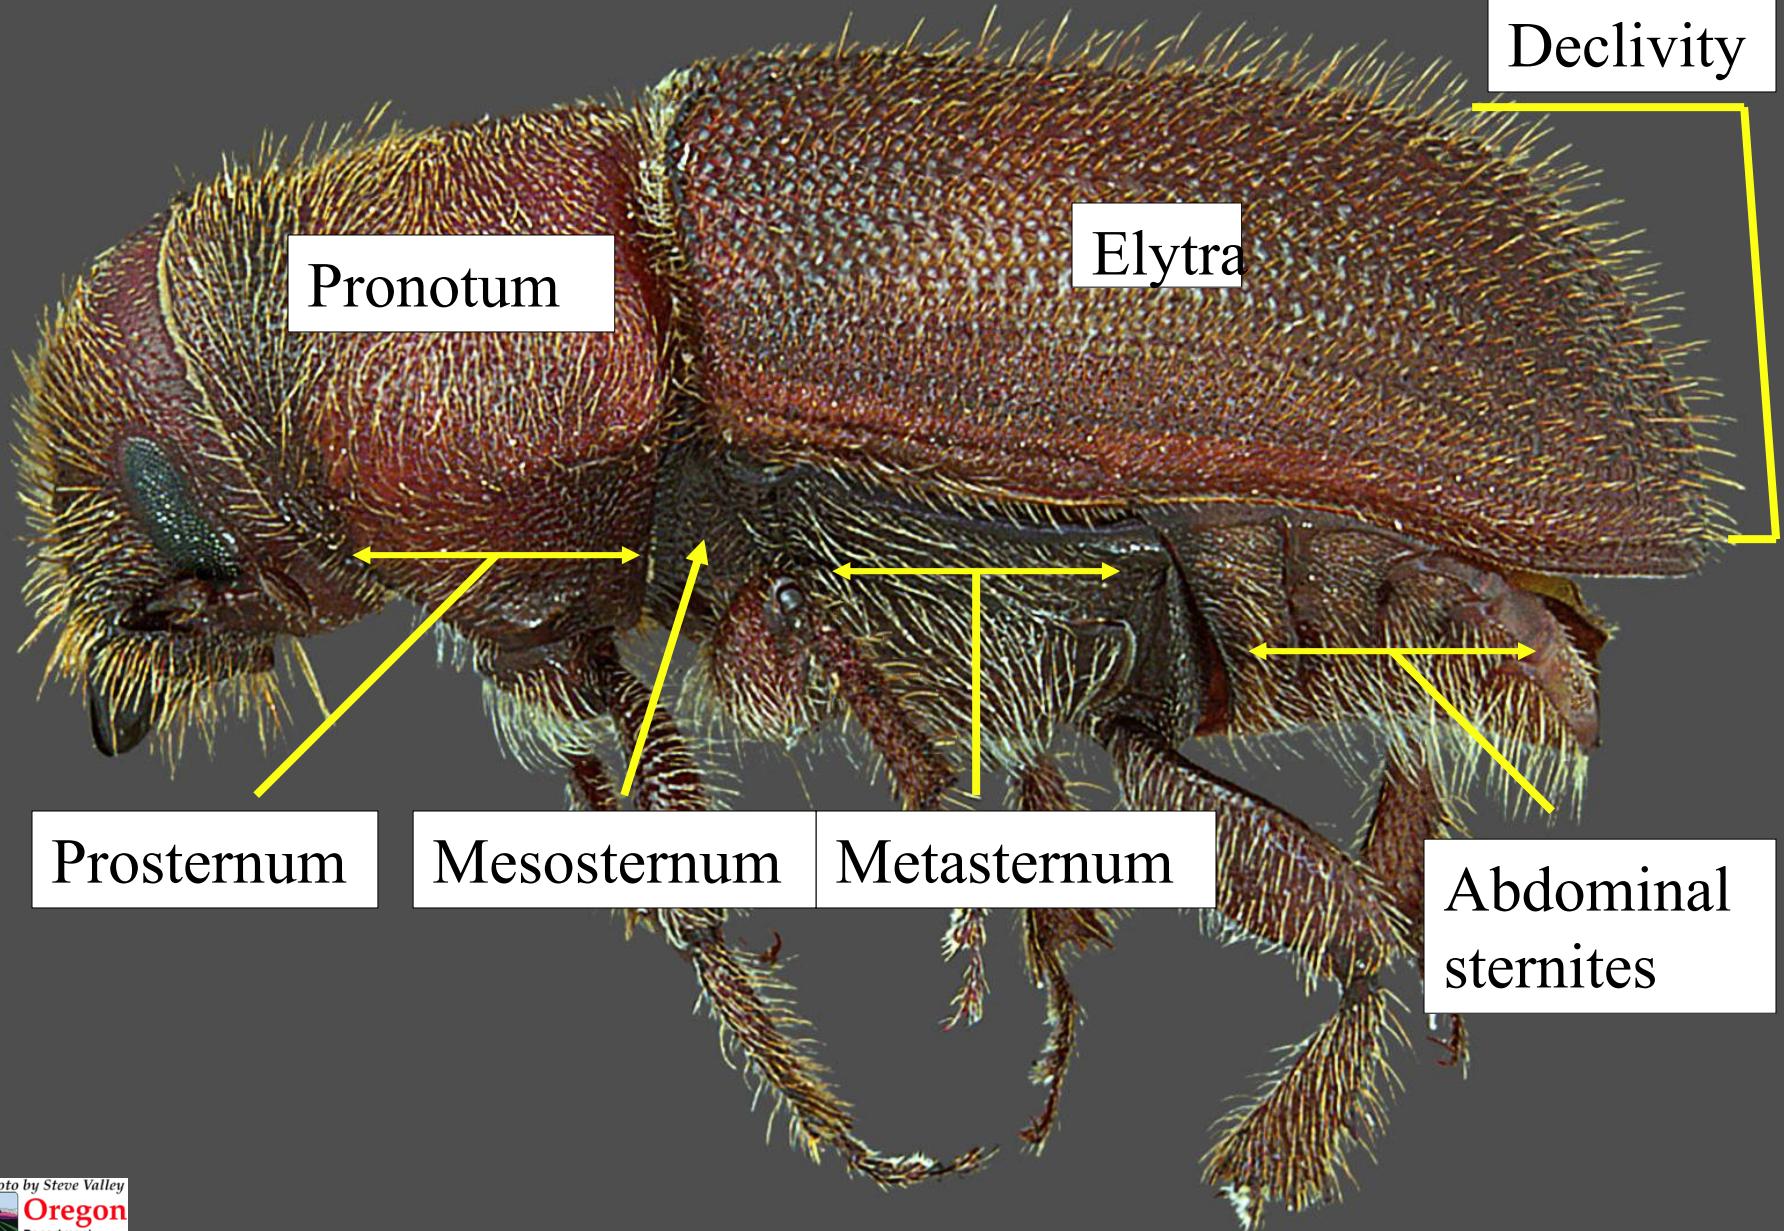

Basic morphology, characters and tribes

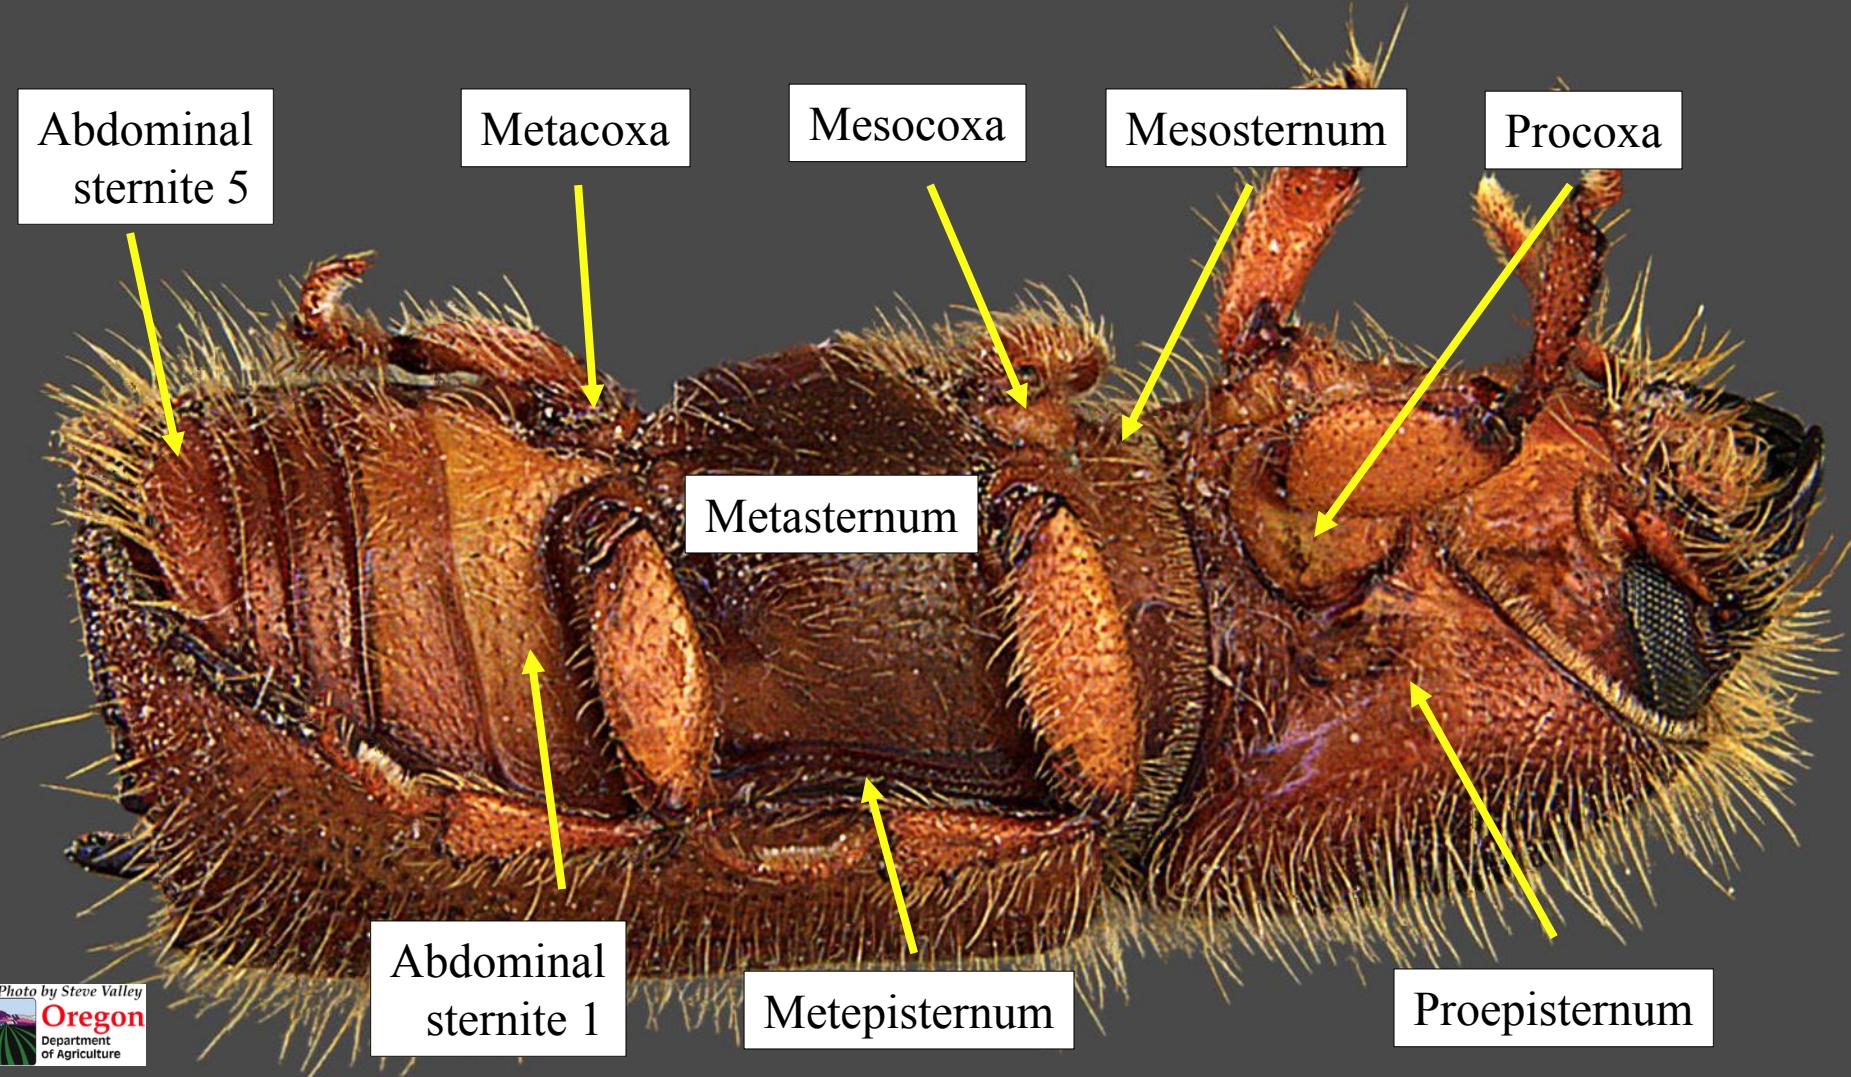

Bob Rabaglia – US Forest Service

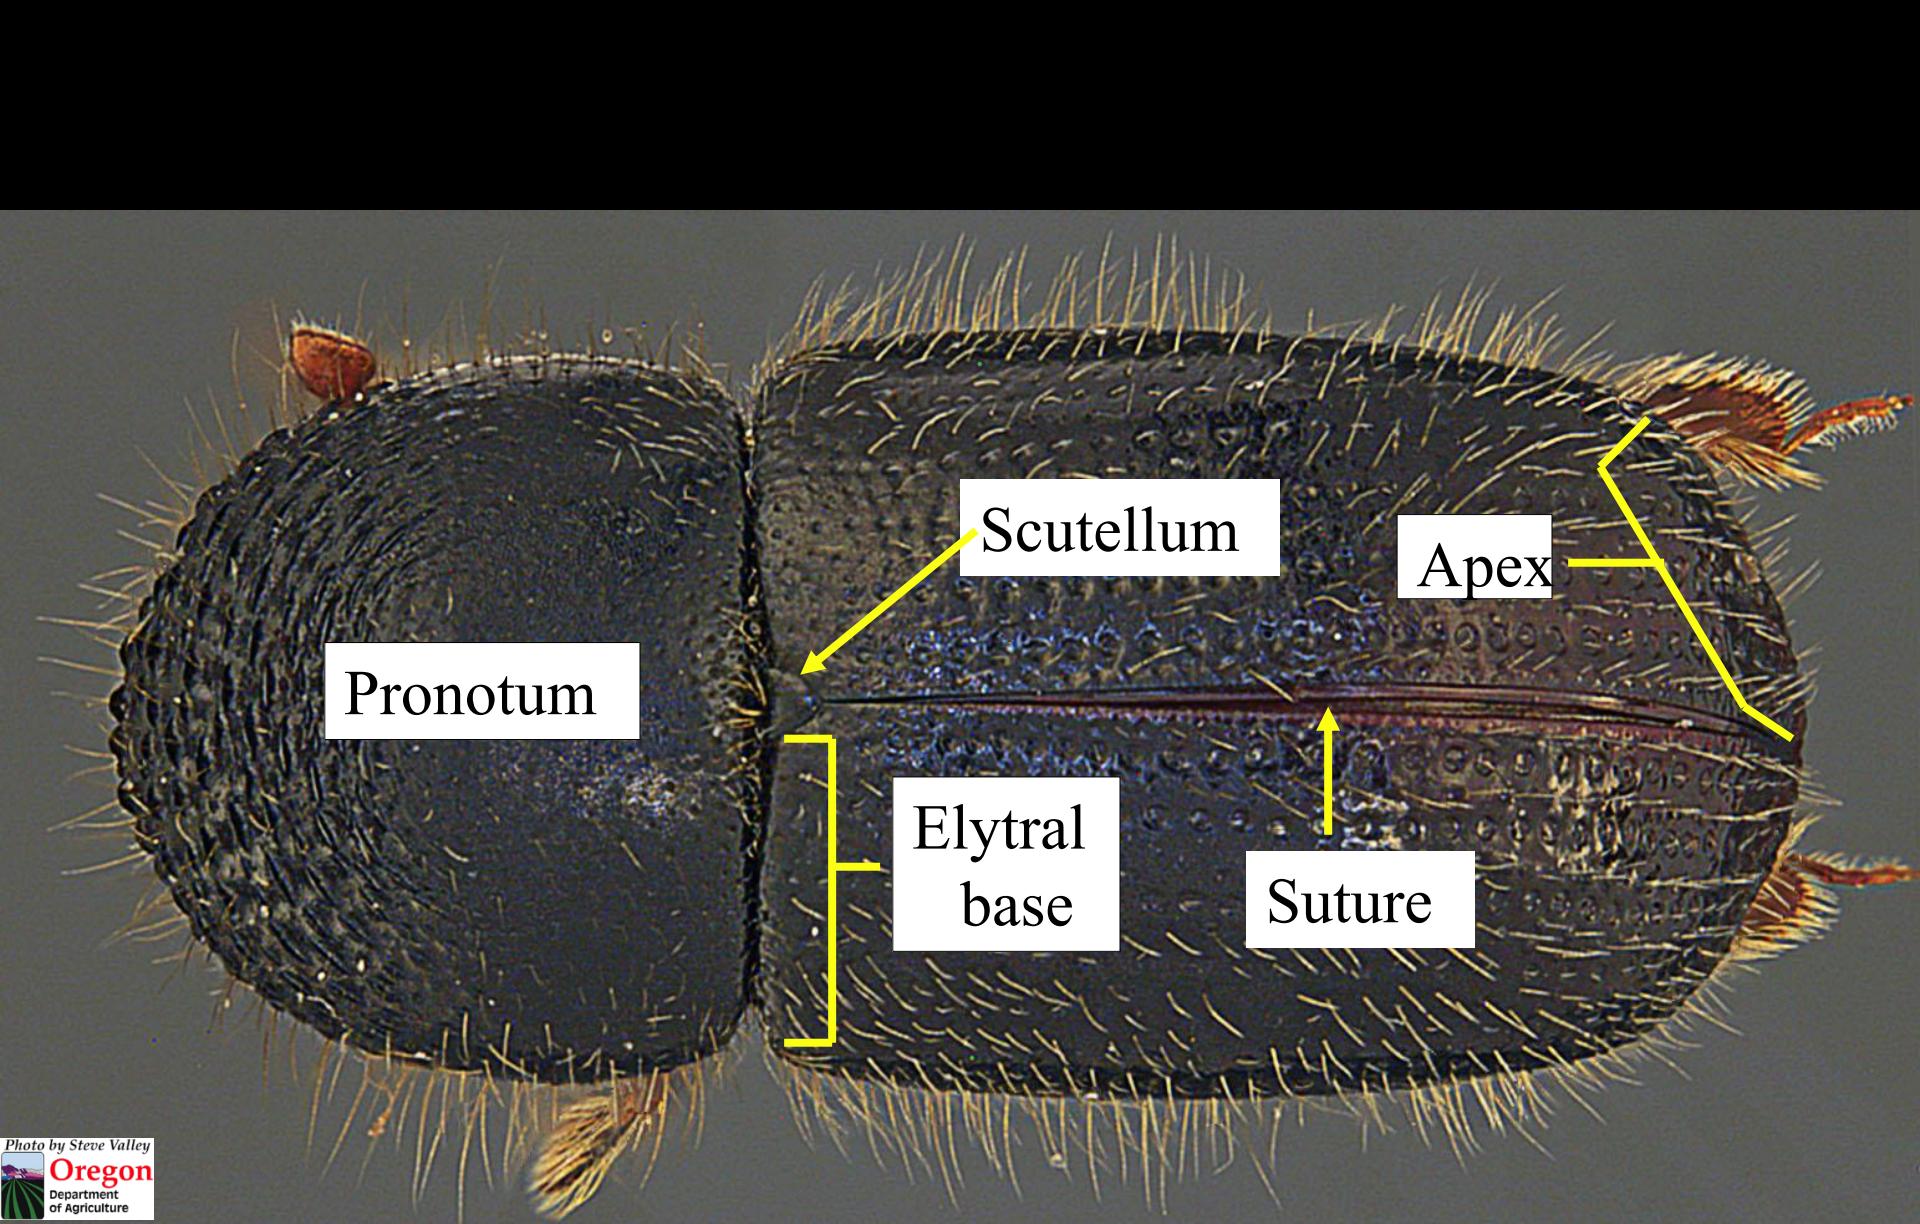

Rick Hoebeke – U. of Georgia

Marc DiGirolomo – US Forest Service

2016

Striae are the series of large, linearly arranged, punctures. They (and interstriae) are counted from the suture (sutural stria = 1).

Interstria

Stria

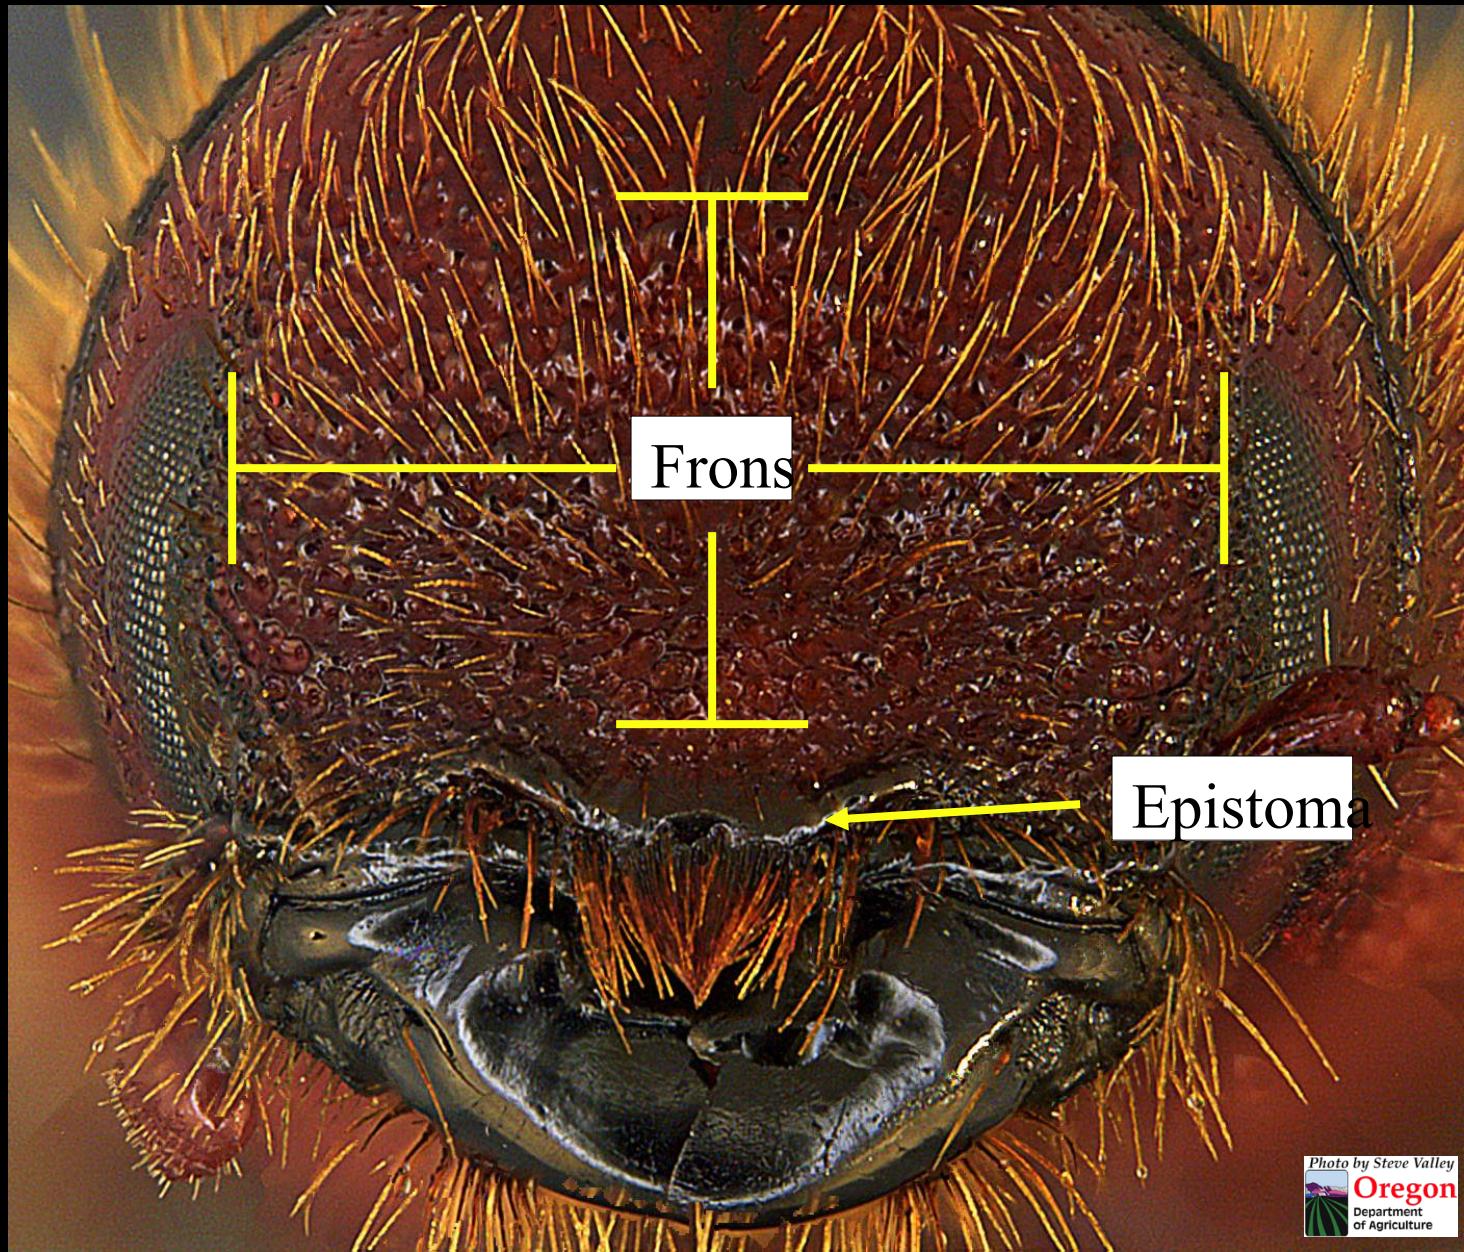

Stria 2

Interstria 2

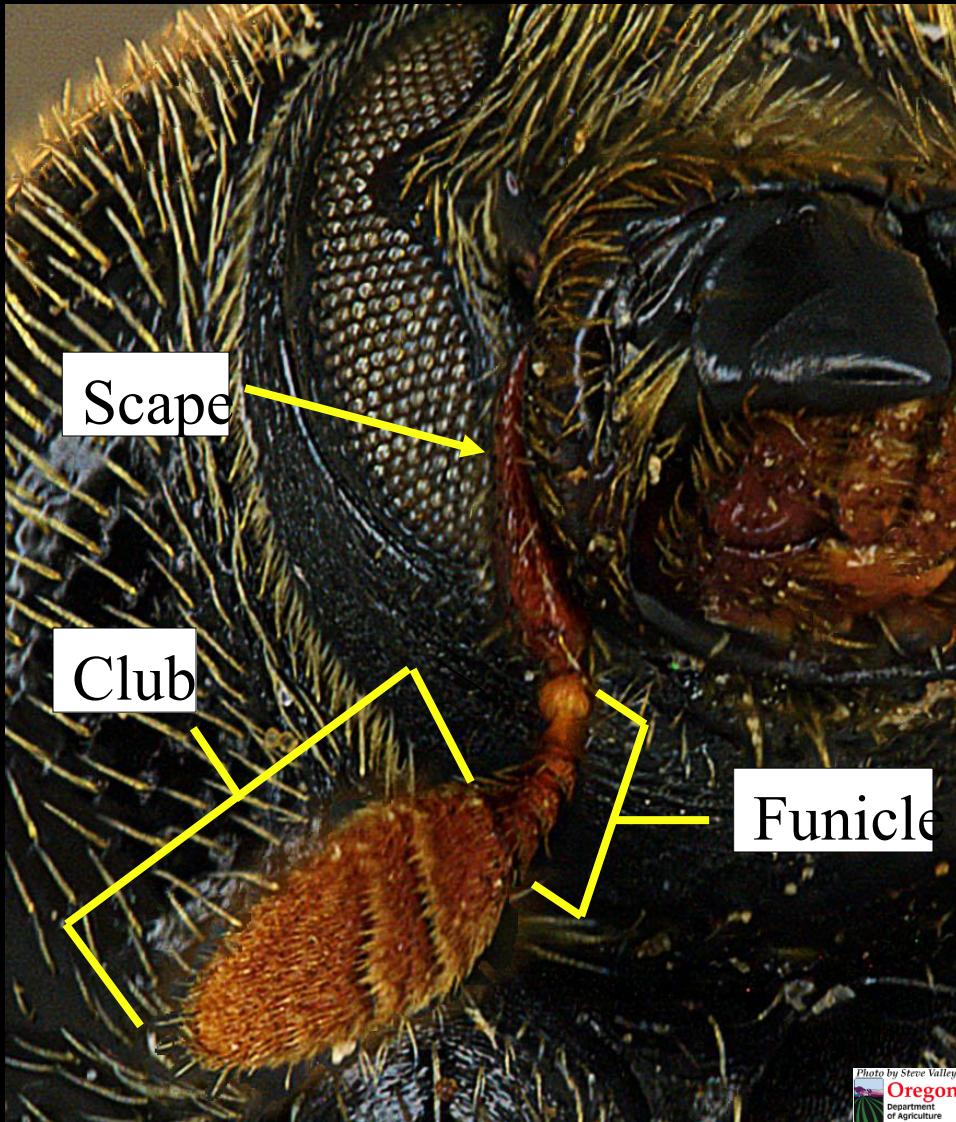

Stria 1 (sutural)

Interstria 1
(sutural)

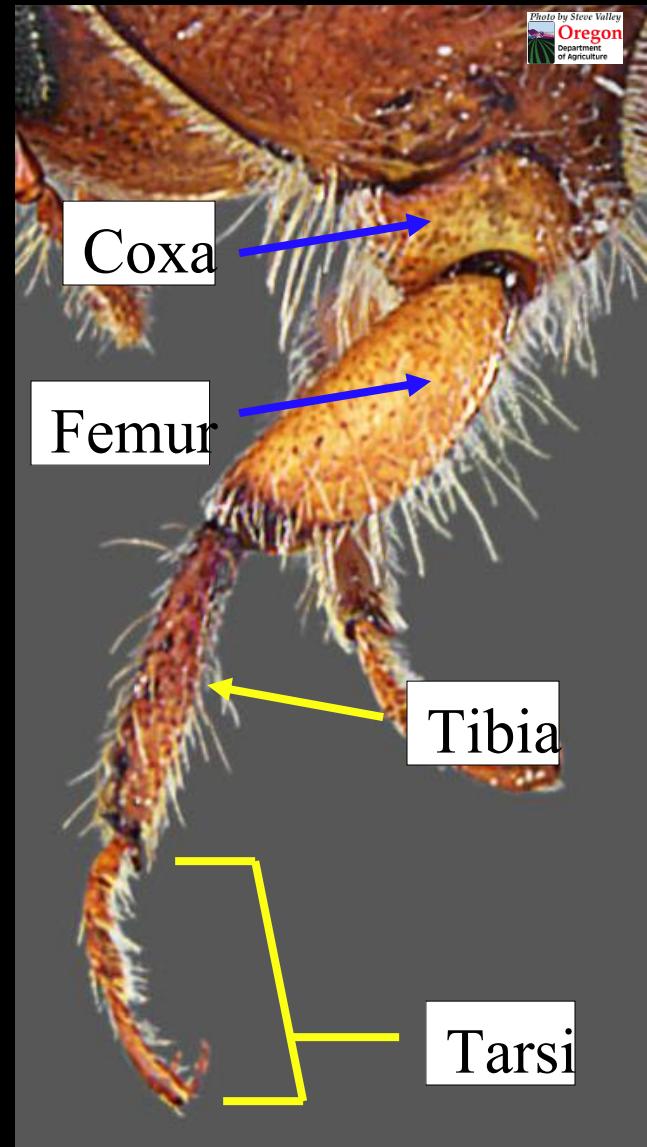

Interstriae are the more-or-less flattened ridges between striae. Interstriae may or may not be punctate - if so, the punctures are normally smaller than those of the striae.

Antenna

Leg

A Few Technical Terms

Acuminate: strongly and abruptly tapered to a narrow apex

Asperities: small, sharp elevations or teeth

Contiguous: touching or in contact

Corneous: of a hard, smooth texture

Crenulations: blunt, rounded teeth or scallops

Procurved: curving anteriorly

Recurved: curving posteriorly

Setose: covered with setae

Spine: a thorn-shaped, generally pointed process emerging
from a surface, normally longer than wide

Sulcate: channeled or grooved

Tubercle: a bump, a generally rounded process emerging
from a surface, generally no longer than wide

Vestiture: a clothing of hairs or scales

Classification: «things are changing»

- Mitochondrial genomes
- 23 Scolytinae, most tribes
- 2 Platypodinae
- *Coptonotus*
- 4 Cossoninae
- Wood borers not monophyletic

Gillet CPDT, Crampton-Platt A, Timmermans MJTN, Jordal BH, Emerson BC & Vogler AP. 2014. Bulk de novo mitogenome assembly from pooled total DNA elucidates the phylogeny of weevils (Coleoptera: Curculionoidea). *Molecular Biology and Evolution*, in press

Cossoninae

- Rounded eyes
- Long procoxal part of prosternum
- Hypostomal spine
- Terminal curved uncus, inner grooming comb

Hypostomal spine

Cossoninae © Ken Walker

uib.no

Legs: coxae and tibiae

Protibiae:

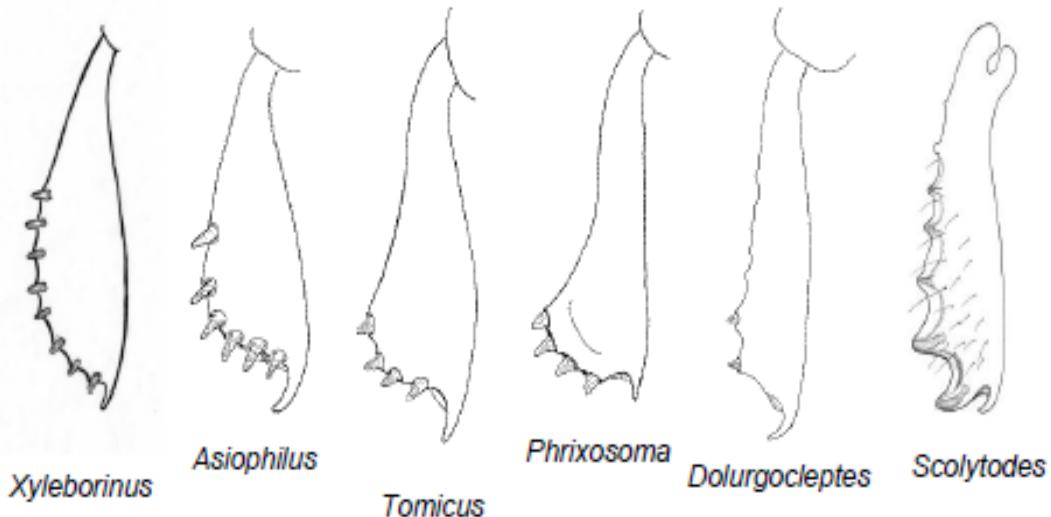

- One of the major taxonomic structure in scolytines
- Unsocketed spines
- Socketed lateral denticles
- Mesal teeth
- Rugae and rugosities
- Inflation
- Bowl-shape

Hylastini

Hylurgops: 7 spp. - throughout N.A. (1 introduced sp., *palliatus*);

Pachysquamus: 1 sp – native in W. US (formerly *Hylurgops*);

Hylastes: 14 spp. - throughout N.A. (1 introduced sp., *opacus*)

Scierus: 2 spp. - N & W N.A.;

Hylastini

Hylurgops, Pachysquamus, Hylastes, Scierus

- Head visible from above
- All tibiae bearing several teeth, none extending beyond tarsal insertion
- Crenulations of elytral bases obsolete

Hylesinini

Hylastinus: 1 sp. (*obscurus*, introduced), across N.A.;

Alniphagus: 2 spp. - W N.A.;

Hylesinus: 7 spp. - across N.A.

Hylastinus

Alniphagus

Hylesinus

Hylesinini

Hylastinus, Alniphagus, Hylesinus

- Anterior margin of elytra procurved, bearing series of crenulations
- Pronotum asperate on anterolateral areas

Hylurgini

Hylurgopinus: 1 sp. (*rufipes*) - E N.A.;

Pseudohylesinus: 9 spp. - W N.A.;

Xylechinus: 2 spp. - N & W N.A.;

Hylurgus: 1 sp. (*ligniperda*, introduced) – NY, CA;

Tomicus: 1 sp. (*piniperda*, introduced) - NE N.A.;

Dendroctonus: 13 spp. - throughout N.A.

Hylurgopinus

Xylechinus

Hylurgus

Tomicus

Dendroctonus

Hylurgini

Hylurgopinus, Pseudohylesinus, Xylechinus, Hylurgus, Tomicus, Dendroctonus

- Anterior margin of elytra procurved, bearing series of crenulations
- Prothoracic precoxal area short; lateral precoxal ridge present or absent
- Anterolateral areas of pronotum unarmed
- Eyes entire to feebly marginate
- Antennal funicle 5-7 segmented

Bothrosternini

Cnesinus: 1 sp. (*strigicollis*) - SE U.S. & Mexico;

Pagiocerus: 1 sp. (*frontalis*) - NC to Mexico

Bothrosternini

Cnesinus, Pagiocerus

- Anterior margins of elytra procurved, armed by series of crenulations
- Prothorax longitudinally strigose

Phloeotribini

Phloeotribus: 9 spp. - transcontinental in U.S. (2 in W U.S., 7 in E U.S.)

Phloeotribus

Phloeotribini

Phloeotribus

- Antennal club pseudolamellate, club divided into 3 movable segmental units

Pseudolamellate club.

Phloeosinini

Dendrosinus: 1 sp. (*bourreriae*) - Florida Keys;

Phloeosinus: 25 spp. - 3 in E U.S., remainder in W U.S.;

Chramesus: 9 spp. - transcontinental in U.S.

Phloeosinus

Chramesus

Phloeosinini

Dendrosinus, Phloeosinus, Chramesus

- Anterior margins of elytra procurved, armed by series of crenulations
- Antennal club fused at sutures, sutures oblique, or partly or entirely obsolete

Hypoborini

Chaetophloeus: 10 spp. - mostly W N.A.;

Liparthrum: 2 spp. - AZ & MS, IN

Chaetophloeus

Liparthrum

Hypoborini

Chaetophloeus, Liparthrum

- Anterior margins of elytra procurved, armed by series of crenulations (from suture to interstriae 5 prominent)
- Scutellum not visible, elytral bases straight

Polygraphini

Polygraphus: 3 spp. - throughout U.S.;

Carphoborus: 20 spp. - throughout U.S.;

Carphobius: 1 sp. (*arizonicus*) - Arizona

Polygraphus

Carphoborus

Polygraphini

Polygraphus, Carphoborus, Carphobius

- Anterior margins of elytra procurved, armed by series of crenulations
- Scutellum not visible
- Eyes emarginate or completely divided

Scolytini

Scolytus: 21 spp. - across N.A. ; 4 spp introduced

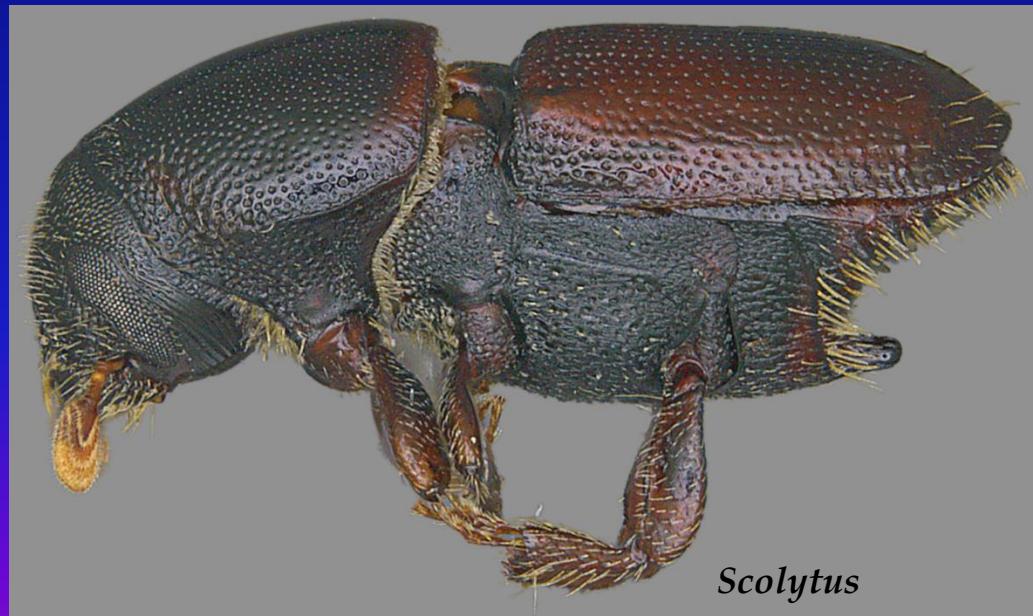

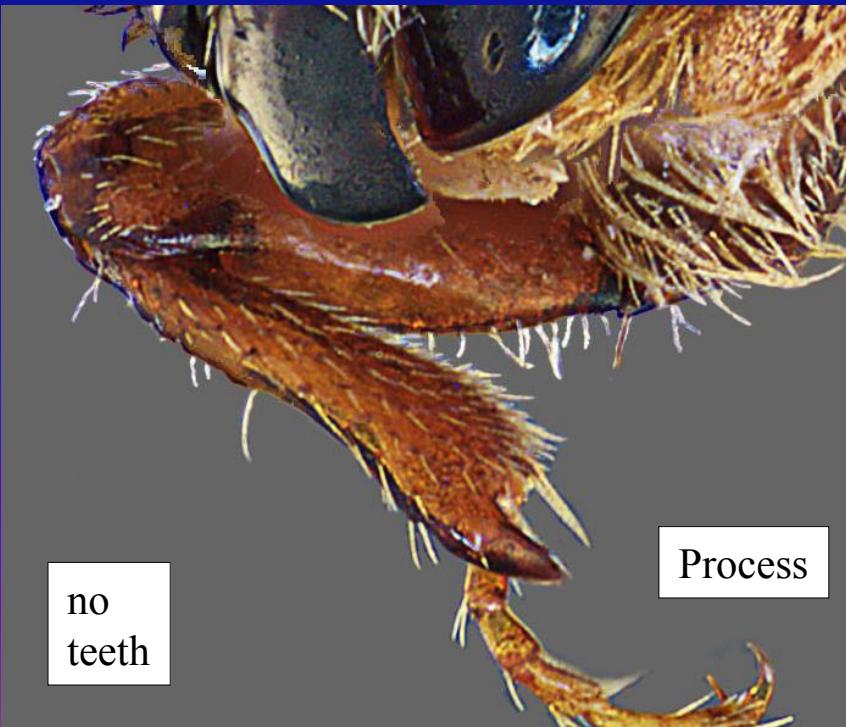

Loganius: 2 spp. - Florida Keys (formerly *Cnemonyx*)

Scolytini

Scolytus, Loganius

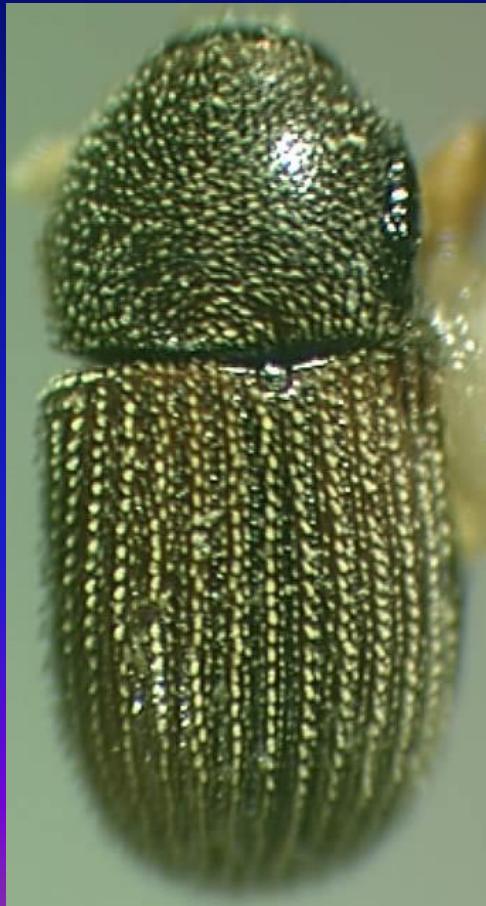

- Lateral margin of anterior and posterior tibia unarmed, except for single curved process at outer apical angle
- Area around scutellum impressed
- Elytra not declivous

Ctenophorini

Pycnarthrum: 1 sp. (*hispidum*) - S FL, TX;

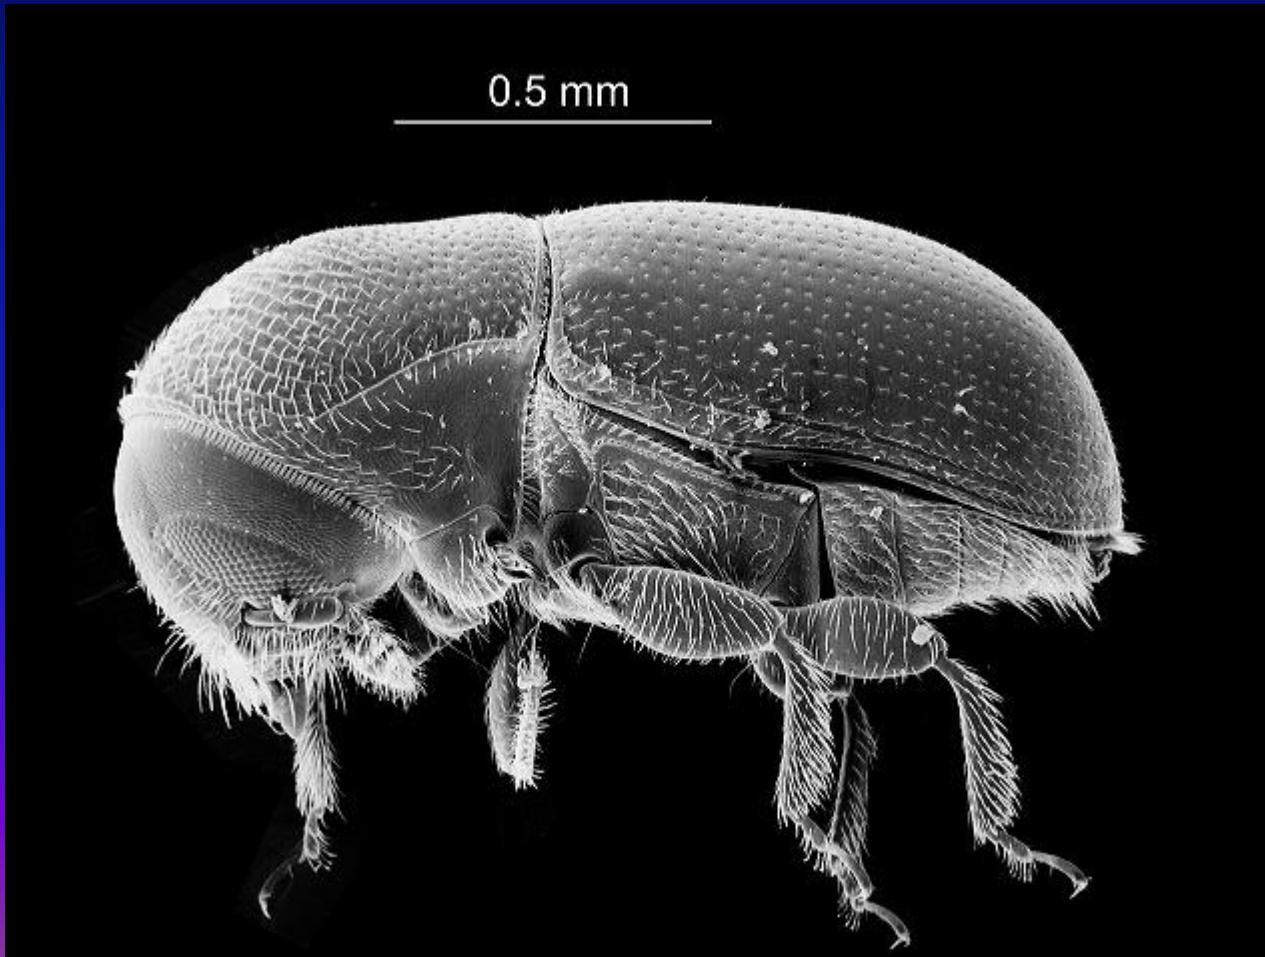

Scolytodes: 1 sp. (*schwarzi*) - S FL (>100 spp. in C. & S.A.)

Ctenophorina

Pycnarthrum, Scolytodes

- Lateral margin of pronotum subacutely elevated, basal margin finely elevated

Micracidini

Stenocleptus: 1 sp. - CA;

Pseudothysanoes: 18 spp. - throughout U.S.;

Thysanoes: 7 spp. - S U.S.;

Hylocurus: 15 spp. - mostly SE U.S.;

Micracis: 4 spp. - throughout U.S.;

Micracisella: 5 spp. - E & S U.S.

Thysanoes

Hylocurus

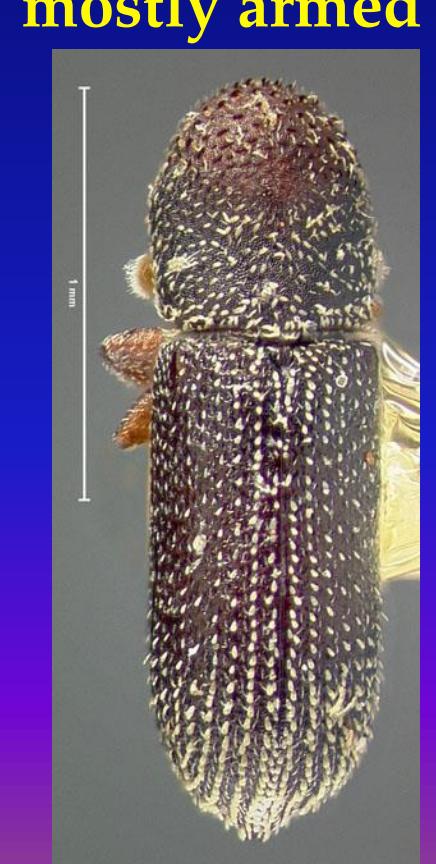

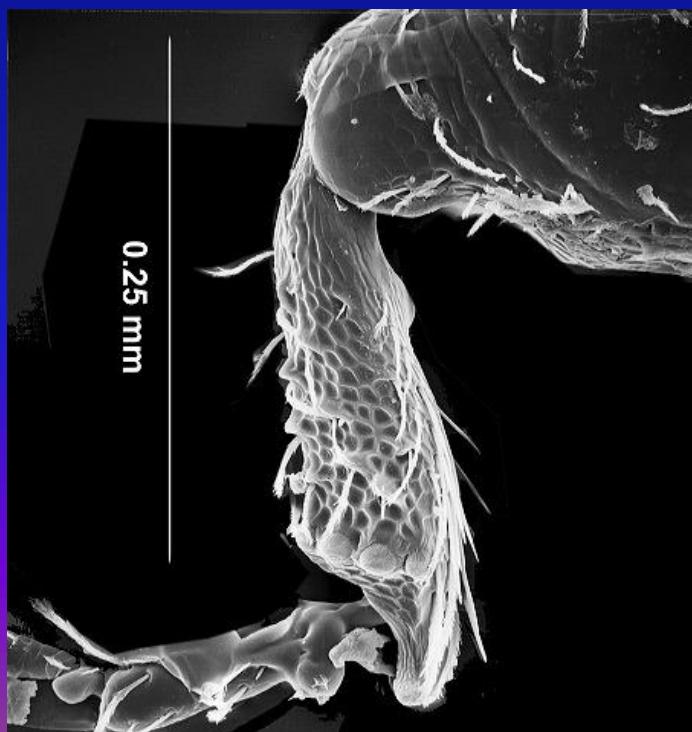

Micracisella

Micracidini

Stenocleptus, Pseudothysanoes, Thysanoes, Hylocurus, Micracis, Micracisella

- Lateral margin of anterior tibia armed by several tooth-like processes
- Procoxae subcontiguous, but separated
- Foretibia with sides parallel to the apex, mostly armed on apical margin by small teeth

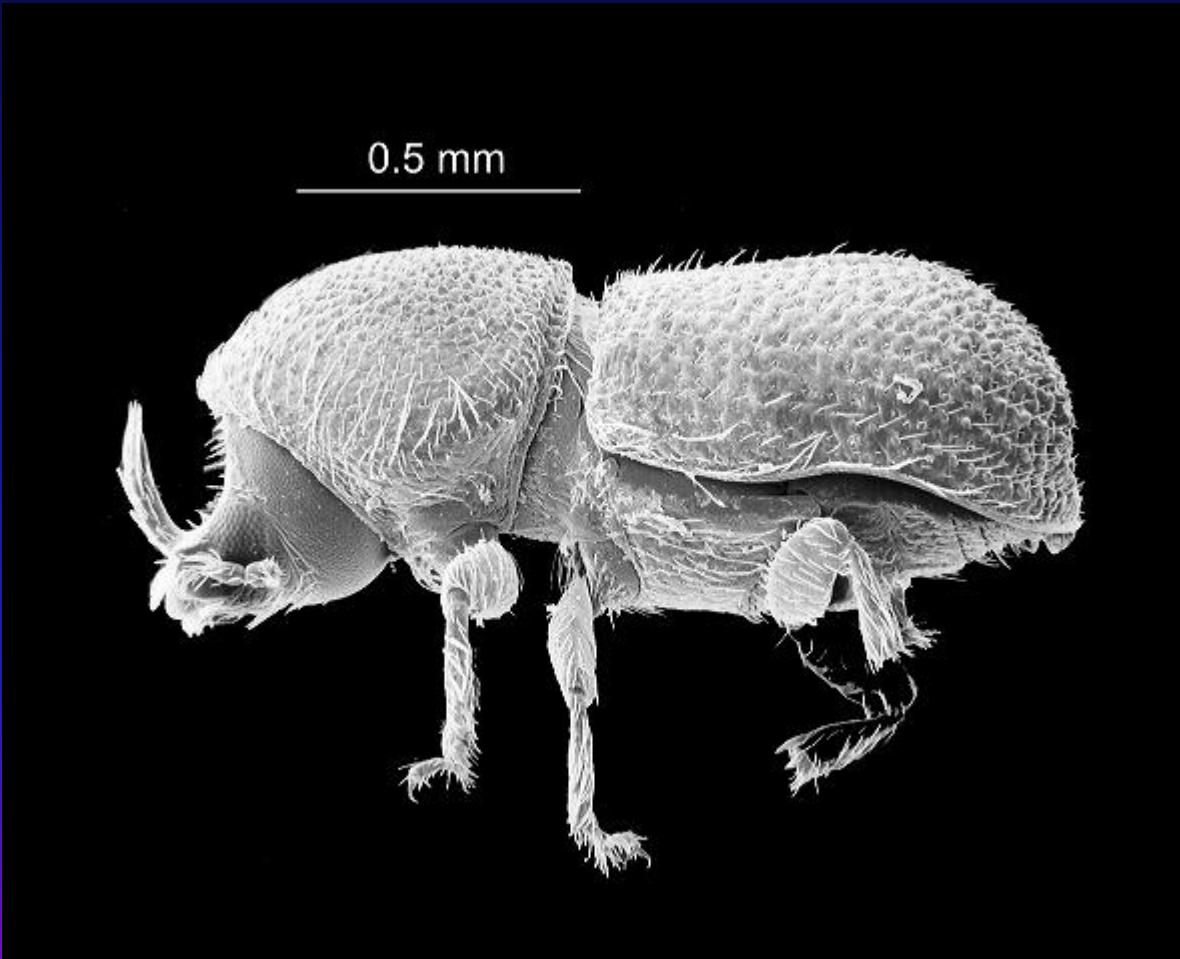

Cactopinini

Cactopinus: 6 spp. - SW U.S. (cactus & pine)

Cactopinini

Cactopinus

Ipini

Pityogenes: 7 spp. – across N.A.; 1 sp. introduced (*bidentatus* NE);

Pityokteines: 6 spp. - across N.A.;

Orthotomicus: 4 sp. - across N.A.; 1 sp. introduced (*erosus* in CA)

Ips: 23 spp. - across N.A.;

Pseudips: 2 spp. - W N.A.

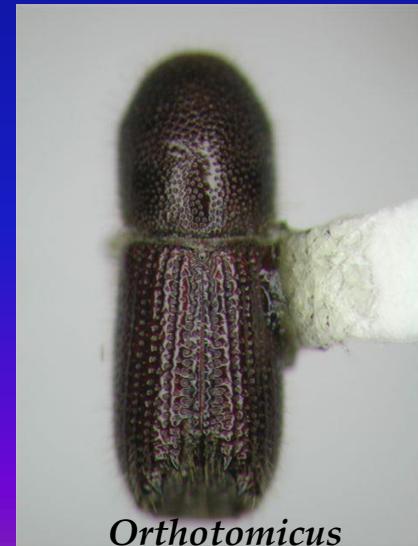

Premnobius: 1 sp. (*cavipennis*), introduced to FL;

Pityogenes

Pityokteines

Orthotomicus

Ips

Ipini

Pityogenes, Pityokteines, Orthotomicus, Ips, Pseudips, Premnobius

- **Meso- and metathoracic tibiae more abruptly narrowed on apical fourth**
- **Elytral declivity moderately sulcate to elaborately excavated, with lateral margins usually armed by tubercles or spines**

Ips

Dryocoetini

Dendrocranulus: 3 spp. - S & W N.A.;

Lymantor: 2 spp. - E U.S. & Canada, Alaska;

Dryocoetes: 7 spp. - across U.S., Canada;

Dactylotrypes: 1 sp - introduced into CA in palm seeds

Coccotrypes: 9 spp. - mostly FL & CA

Lymantor

Dryocoetes

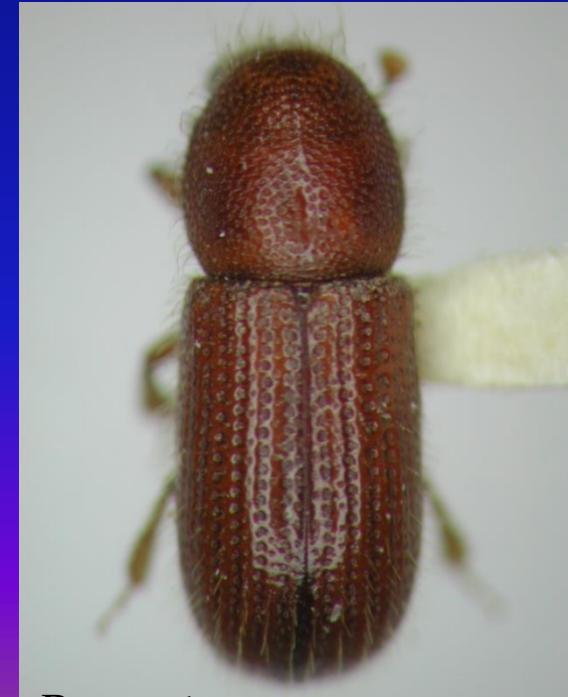

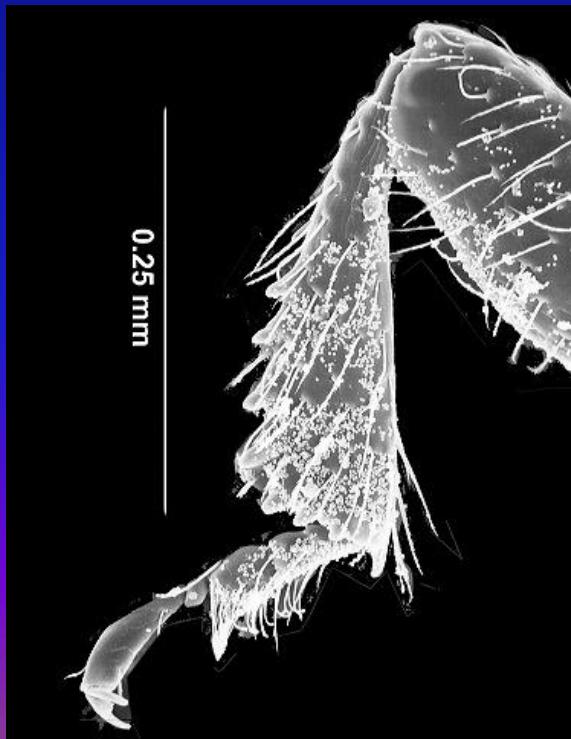

Coccotrypes

Dryocoetini

Dendrocranulus, Lymantor, Dryocoetes, Coccotrypes

- Meso- and metathoracic tibiae more abruptly narrowed on apical fourth
- Pronotum with sides straight to arcuate, anterior half declivous, usually armed

Dryocoetes

Crypturgini

Dolurgus: 1 sp. (*pumilus*) - W N.A.;

Crypturgus: 3 spp. – across N.A. 1 sp. introduced (*pusillus*)

Dolurgus

Crypturgus

Crypturgus

Crypturgini

Dolurgus, Crypturgus

- Antennal funicle 2-3 segmented, club with sutures on posterior face about equal to those of anterior face
- Very small beetles!

Xyloterini

Trypodendron: 6 spp. across N.A.; 1 sp. introduced (*domesticum*) WA

Xyloterinus: 1 sp. (*politus*), E & W N.A.

Trypodendron

Xyloterinus

Xyloterini

Trypodendron, Xyloterinus

- Eyes always completely divided into two parts
- Antennal funicle 4-segmented

Trypodendron

Xyleborini

Ambrosiodmus: 7 spp. - E U.S. (mostly SE); 2 spp introduced;

Ambrosiophilus: 2 spp. – introduced (*atratus* E US; *peregrinus* GA);

Anisandrus: 4 spp. – 2 spp. Introduced (*dispar* across US; *maiche* E US);

Coptoborus: 1 sp. – native FL;

Cnestus: 1 sp – introduced E. US (*mutilatus* E. US)

Cyclorhipidion: 3 spp – introduced;

Dryoxylon: 1 sp. (*onoharaense*, introduced);

Dryocoetoides: 1 sp. native FL;

Euwallacea: 3 sp. – introduced (*validus* & *interjectus* E US; *fornicatus*);

Theoborus: 1 sp. native FL;

Xyleborus: 17 spp. - across N.A. (3 introduced);

Xylosandrus: 5 spp. - 4 introduced (*germanus* across US);

Xyleborinus: 6 spp. - 5 introduced (*saxesenii* across US)

Xyleborini

*Ambrosiodmus, Theoborus, Euwallacea, Ambrosiophilus, Anisandrus,
Cnestus, Dryocoetoides, Xyleborus, Xylosandrus, Xyleborinus...*

Ambrosiodmus

Euwallacea

Xyleborus

Cnestus

Xyleborinus

- Eyes emarginate
- Pronotum strongly convex
- Tibia flat and broad, outer edge convex
- Tibial edge possessing numerous socketed denticles
- Antennal funicle 5-segmented
- Mycangium present, variously located

Cryphalini

Trypophloeus: 4 spp. - N & W N.A.;

Procryphalus: 2 spp. - W N.A.;

Ernoporius: 1 sp. (*kanawhae*), WV;

Scolytogenes: 1 sp. (*knabi*), S FL;

Hypocryphalus: 1 sp. (*mangiferae*), S FL;

Cryphalus: 3 spp. - W N.A.;

Cryptocarenus: 3 spp. - S TX & FL;

Hypothenemus: 21 spp. - across N.A.;

Trischidias: 5 spp. - SE U.S.

Hypothenemus

Cryphalus

Cryphalini

*Trypophloeus, Procryphalus, Ernporicus, Scolytogenes, Hypocryphalus,
Cryphalus, Cryptocarenus, Hypothenemus, Trischidias*

- **Metepisternum largely covered by elytra**
- **Antennal club strongly flattened**
- **Vestiture commonly includes scales**
- **Pronotum often with large asperities**

Pityophthorini

Dendroterus: 2 spp. (TX, CA);

Arapthus: 2 sp. S FL and mid west;

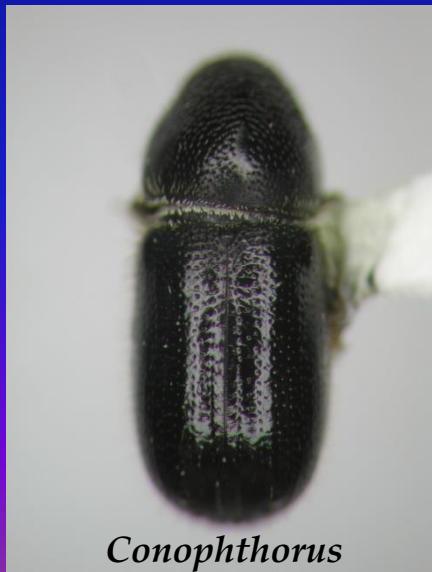

Conophthorus: 8 spp. (2 in E, 6 in W N.A.);

Pityoborus: 2 spp. - SE & SW U.S.;

Pityotrichus: 2 spp. - SW U.S.;

Pseudopityophthorus: 11 spp. - across N.A.;

Pityophthorus: 104 spp. - across N.A.

Conophthorus

Pseudopityophthorus

Pityophthorus

Pityophthorini

*Dendroterus, Araptus, Conophthorus, Pityoborus, Pityotrichus,
Pseudopityophthorus, Pityophthorus*

- Metepisternum largely covered by elytra
- Antennal funicle 5-segmented, club mostly small, symmetrical
- Pubescence often abundant
- Mostly small to very small bark & twig beetles

Corthylini

Corthylus: 4 spp. - U.S., Canada;

Gnathotrichus: 7 spp. – 1 in E, 6 in W;

Monarthrum: 5 spp. (2 in E, 3 in W)

Corthylus

Gnathotrichus

Monarthrum

Corthylini

Corthylus, Gnathotrichus, Monarthrum

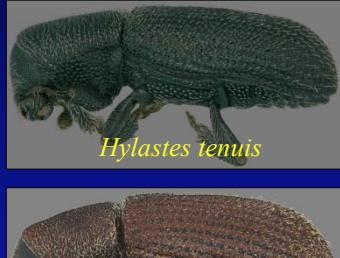

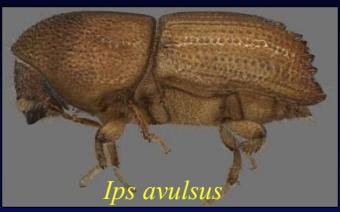

- Metepisternum largely covered by elytra
- Antennal funicle 1-, 2-, or 5-segmented, club much larger, asymmetrical in most
- Pubescence rare
- Ambrosia beetles

Gnathotrichus
