

Continuous Improvement for the Integrated Hydrologic Model & Integrated Northern Tampa Bay Model

University of Florida Water Institute Symposium

February 20, 2024

Jeff Geurink, PhD, PE, Tampa Bay Water

Hui Wang, PhD, PE, Tampa Bay Water

Erin Hayes, PG, Tampa Bay Water

Kay Parajuli, PhD, Tampa Bay Water

Southwest Florida
Water Management District

- Tampa Bay Water – Wholesale drinking water provider
- Integrated Hydrologic Model & Integrated Northern Tampa Bay Model
- Model support for decision making
- Phases of continuous improvement
- Evidence domains for integrated surface water – groundwater models
- Sources of uncertainty in model results
- Examples of continuous improvement
- Summary

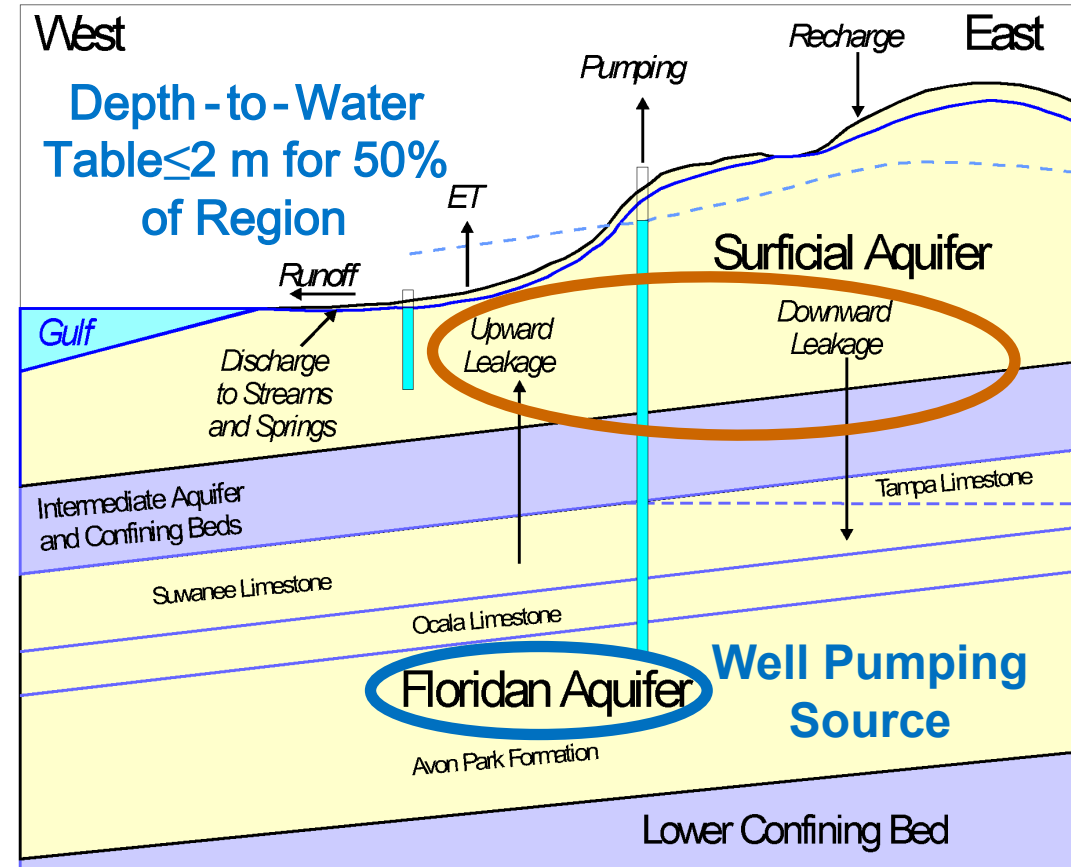

Tampa Bay Water Wholesale Drinking Water Provider to Six Members

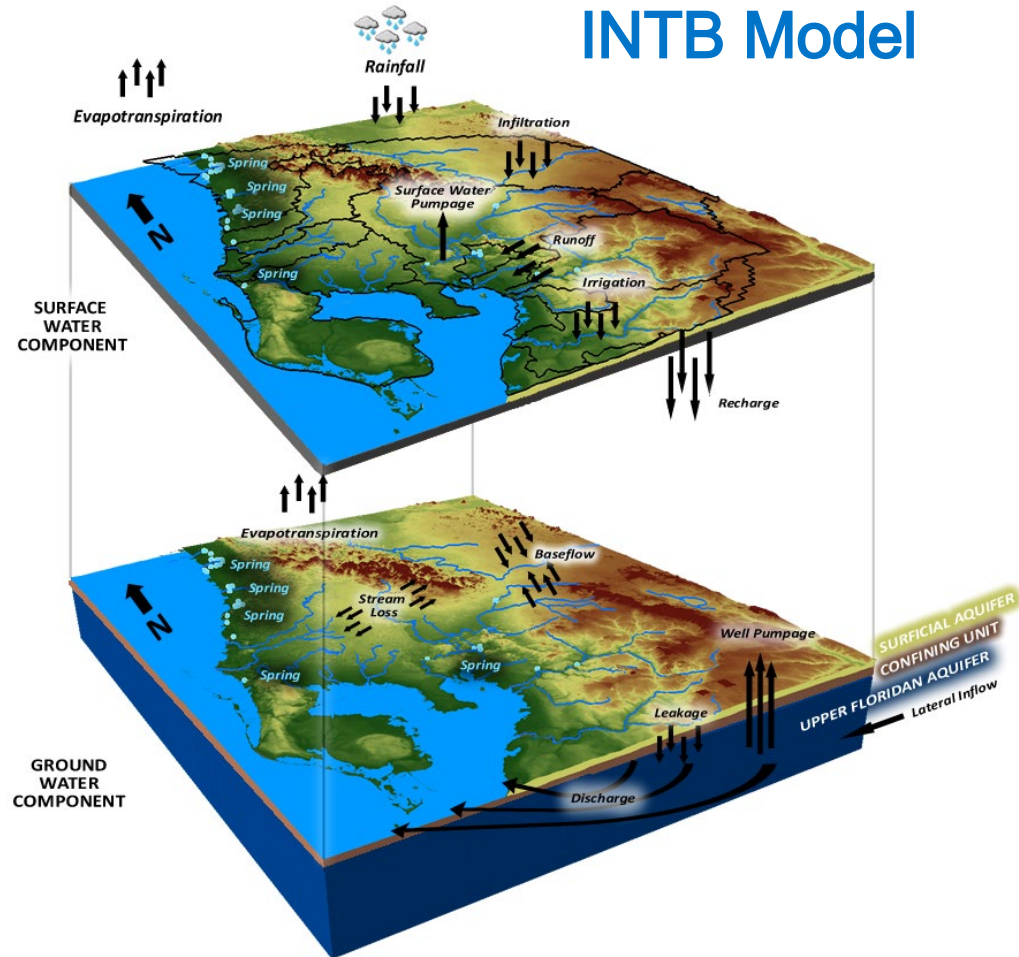

- Integrated, drought-resistant supply system
- Groundwater, Surface Water, Desalinated Water
- 15 Bgal Surface Reservoir
- 2.5 million served

Vertically - Connected Groundwater System

Credit: Geurink and Basso 2013, INTB Model Report

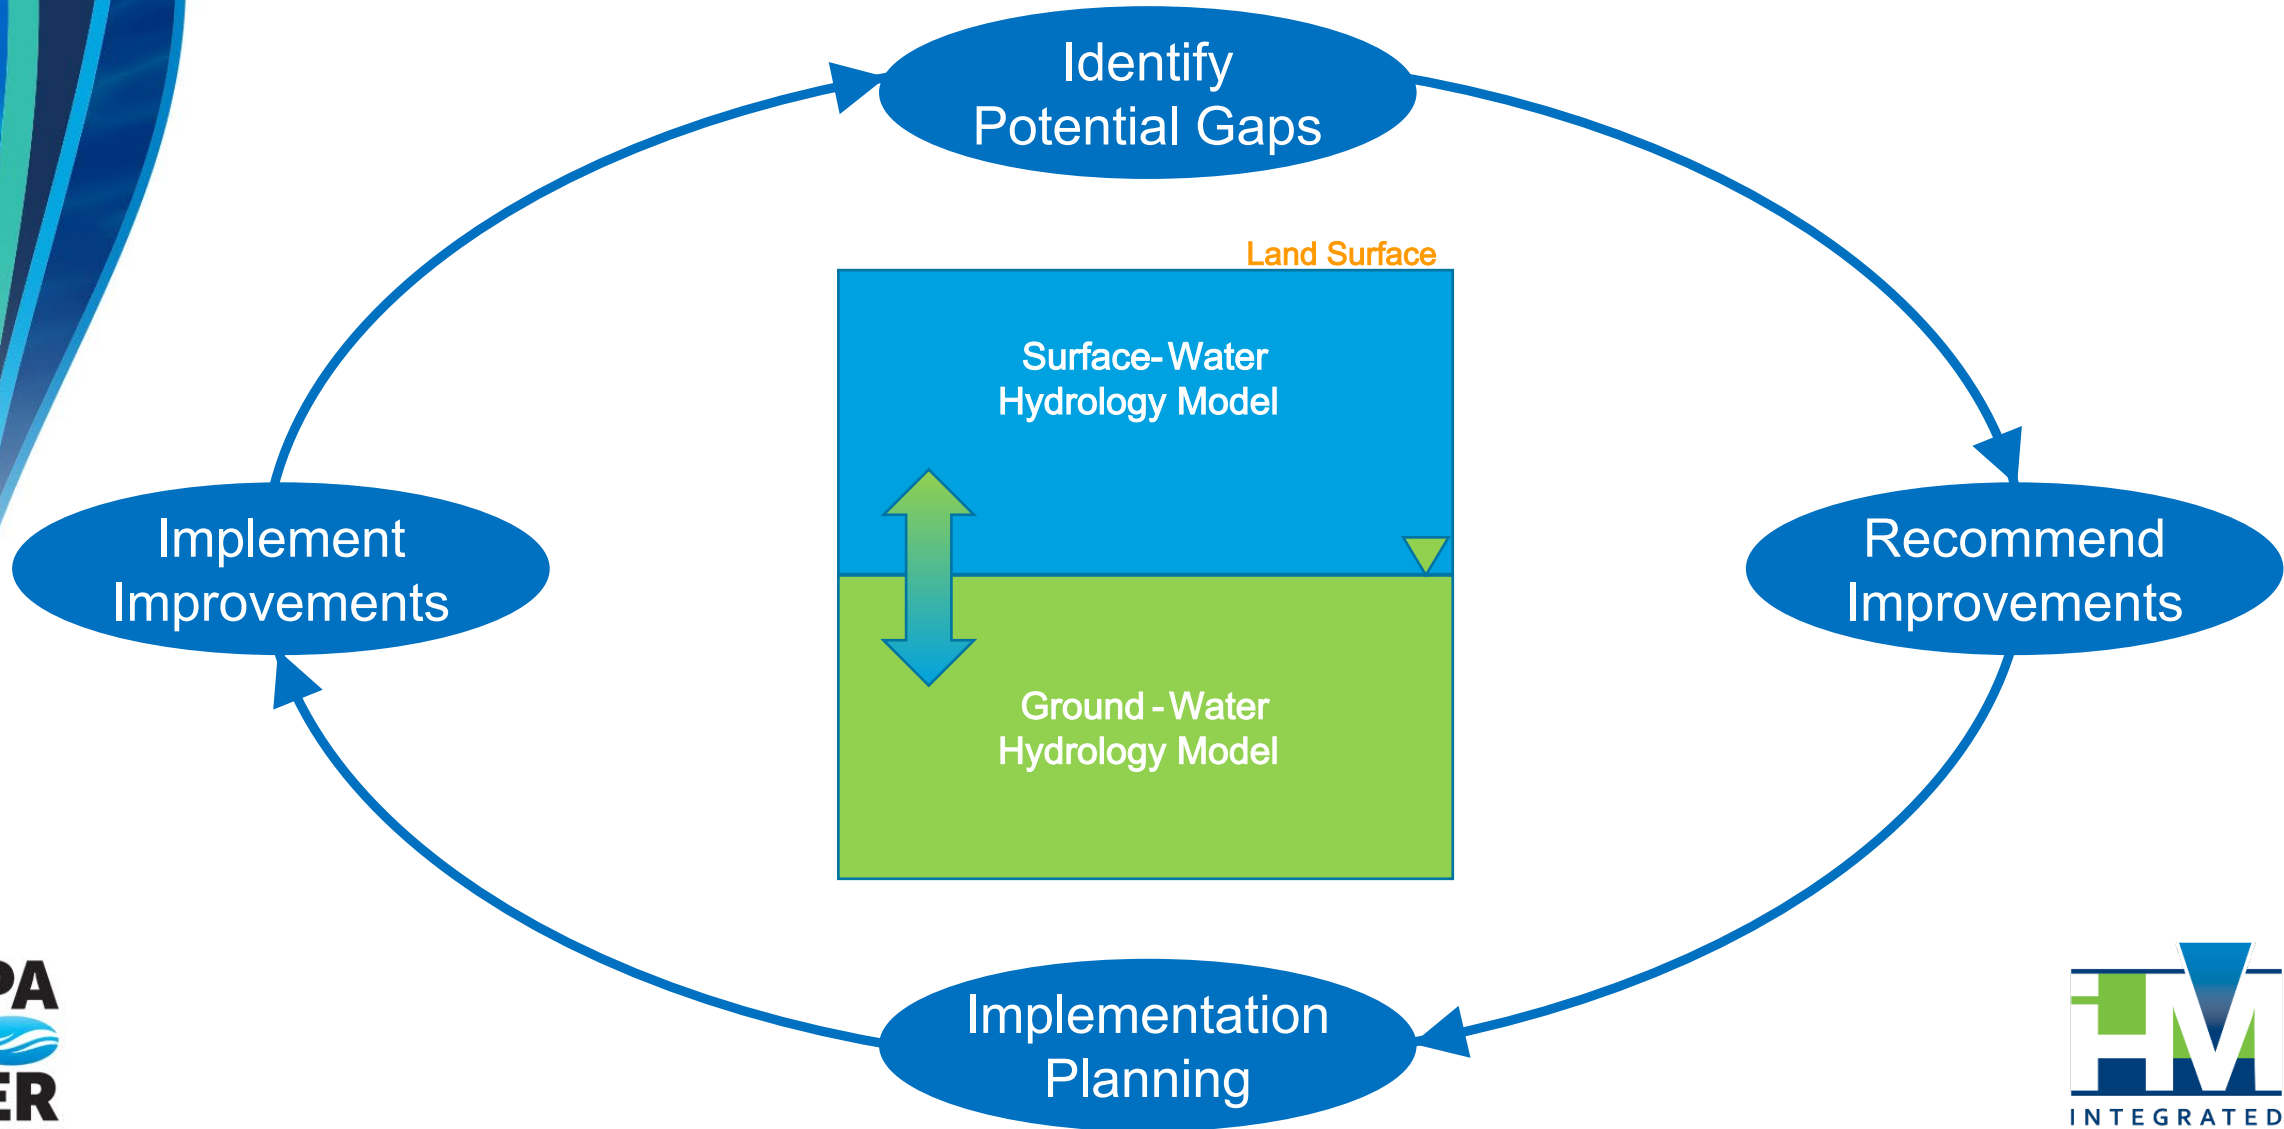

IHM & INTB Models

Support for Decision Making

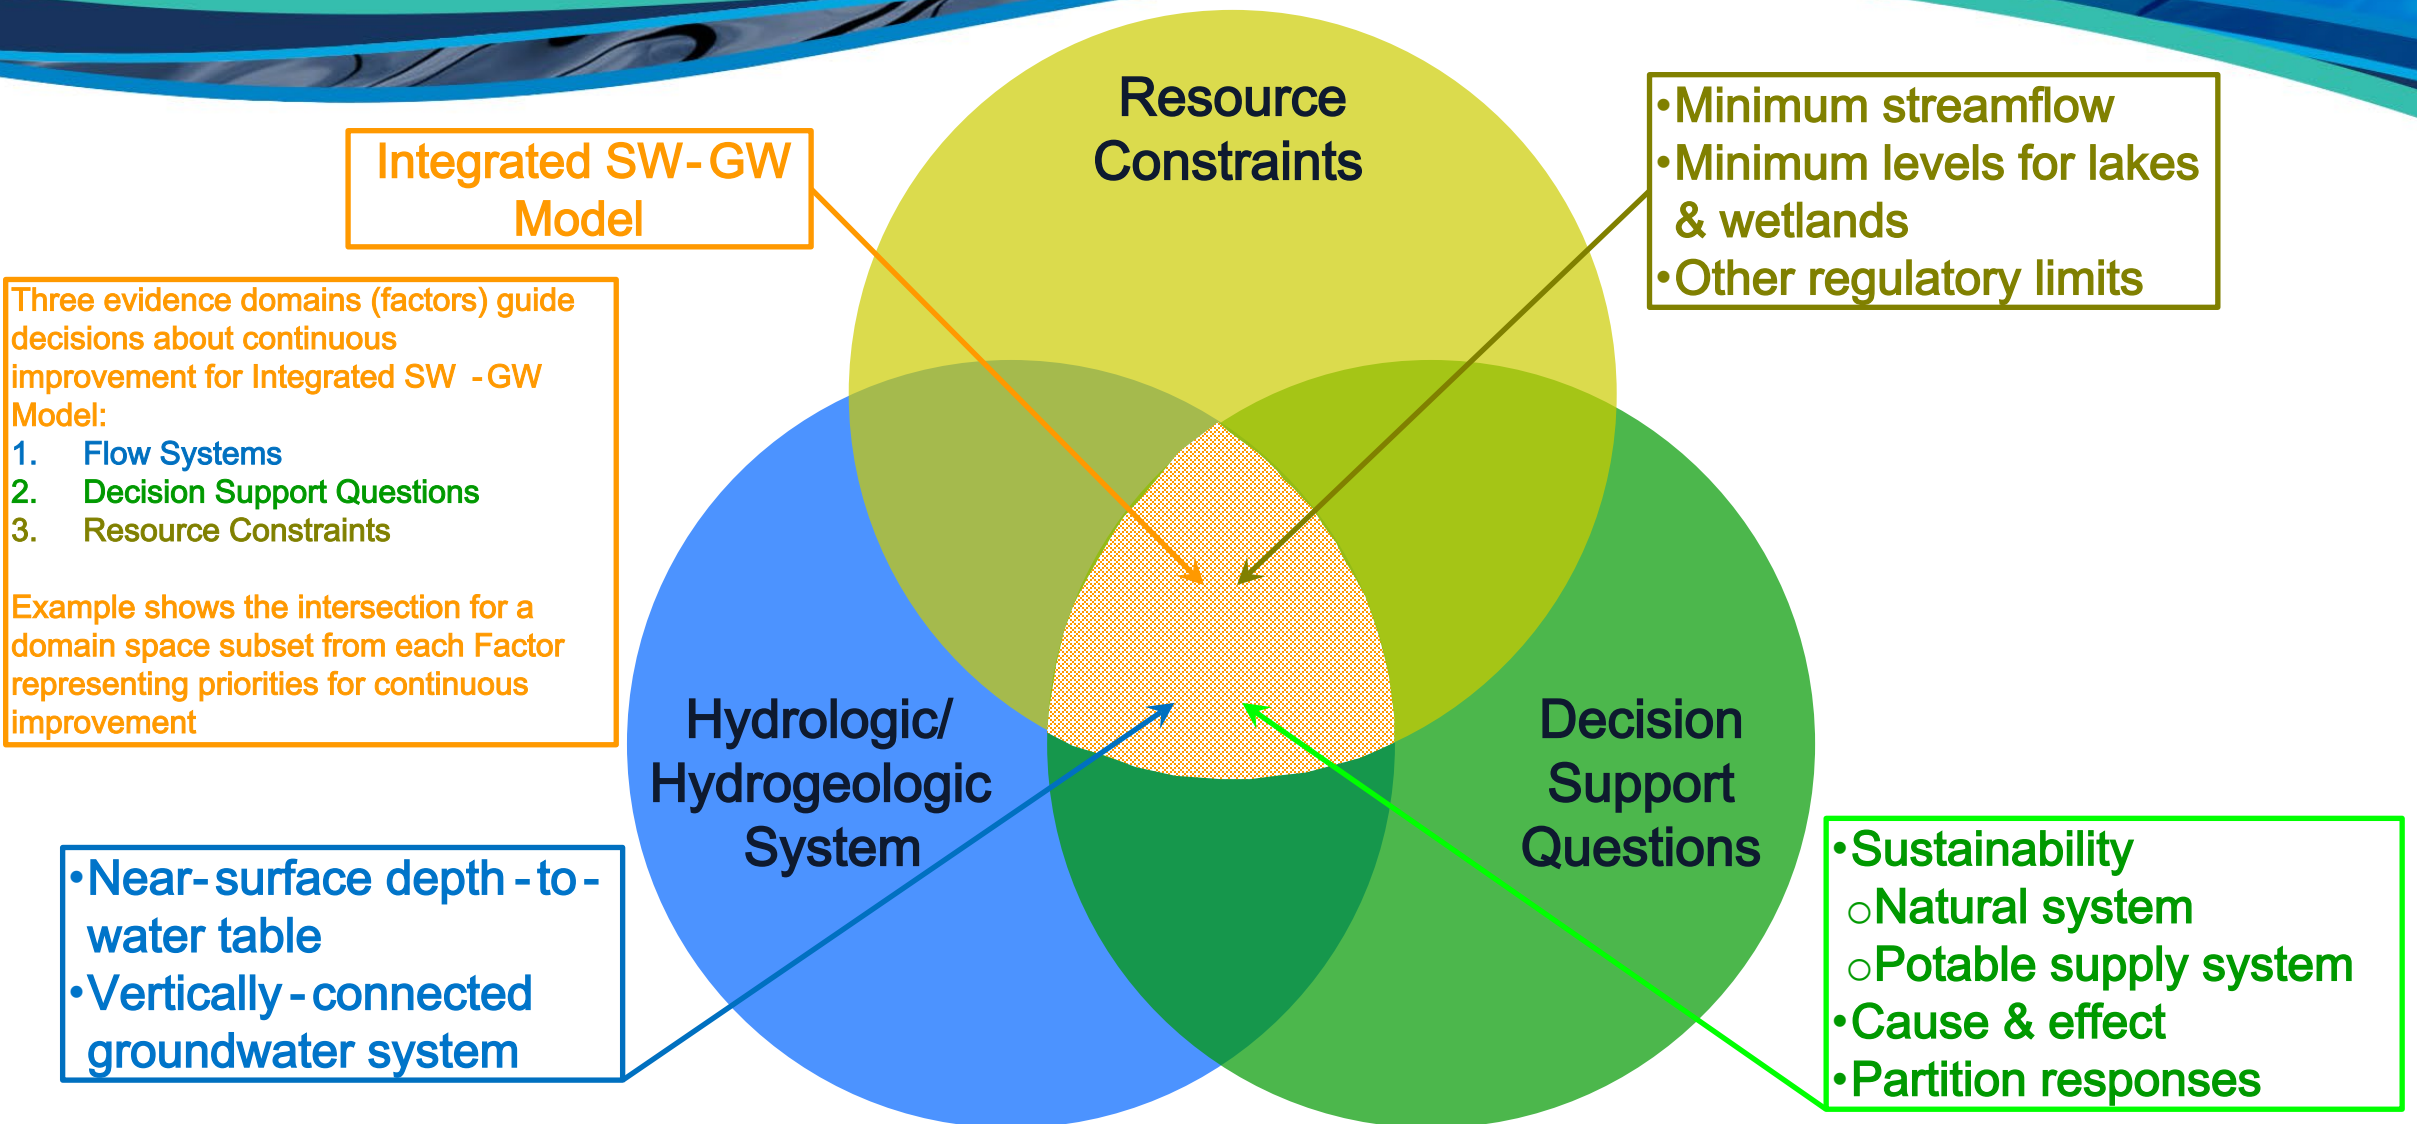

- Water supply system
 - Planning (new sources, water shortage mitigation, wellhead protection)
 - Sustainability assessment (climate variability, well pumping, landuse change, climate change, sea level rise)
 - Operations (pumping optimization)
- Ecologic system sustainability (MFL, permitting)
- Partition hydrologic responses (cause & effect)
 - Water use; well & surface water pumping
 - Climate variability & change
 - Landuse change

IHM & INTB Models

Phases of Continuous Improvement

Evidence Domains for Integrated SW-GW Model

IHM & INTB Models

Sources of Uncertainty in Model Results

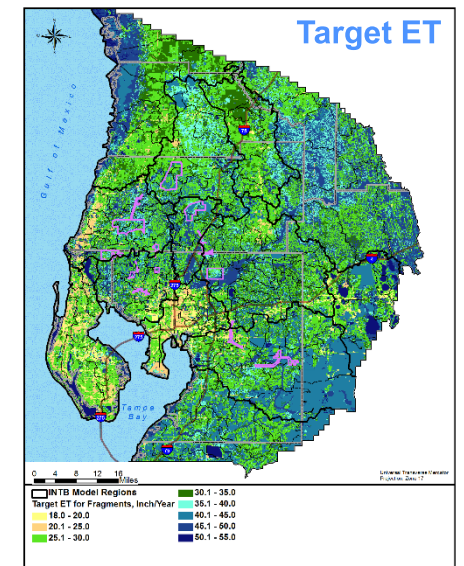

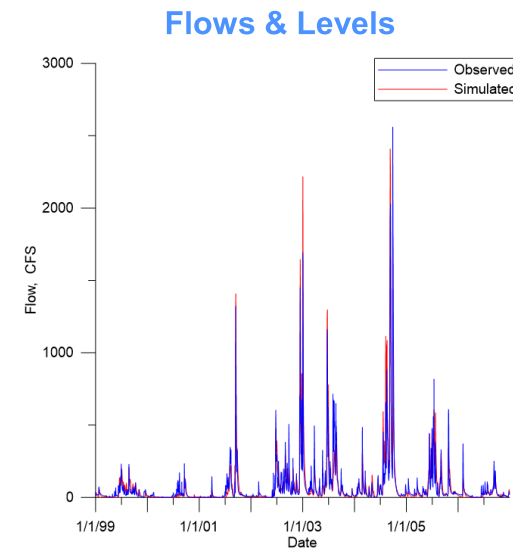

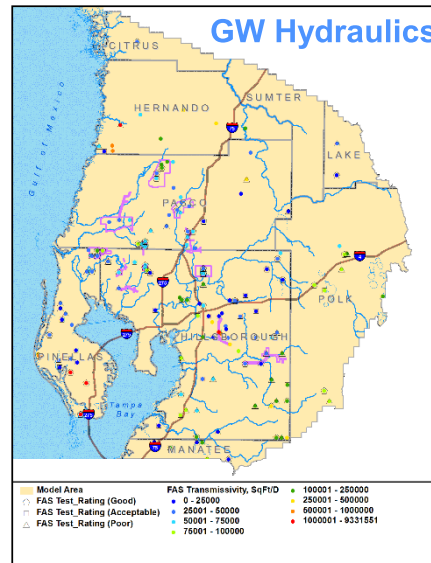

Sources of Uncertainty

Simulation Engine

Conceptualize & Discretize

Model Input Data

Target Data & Constraints

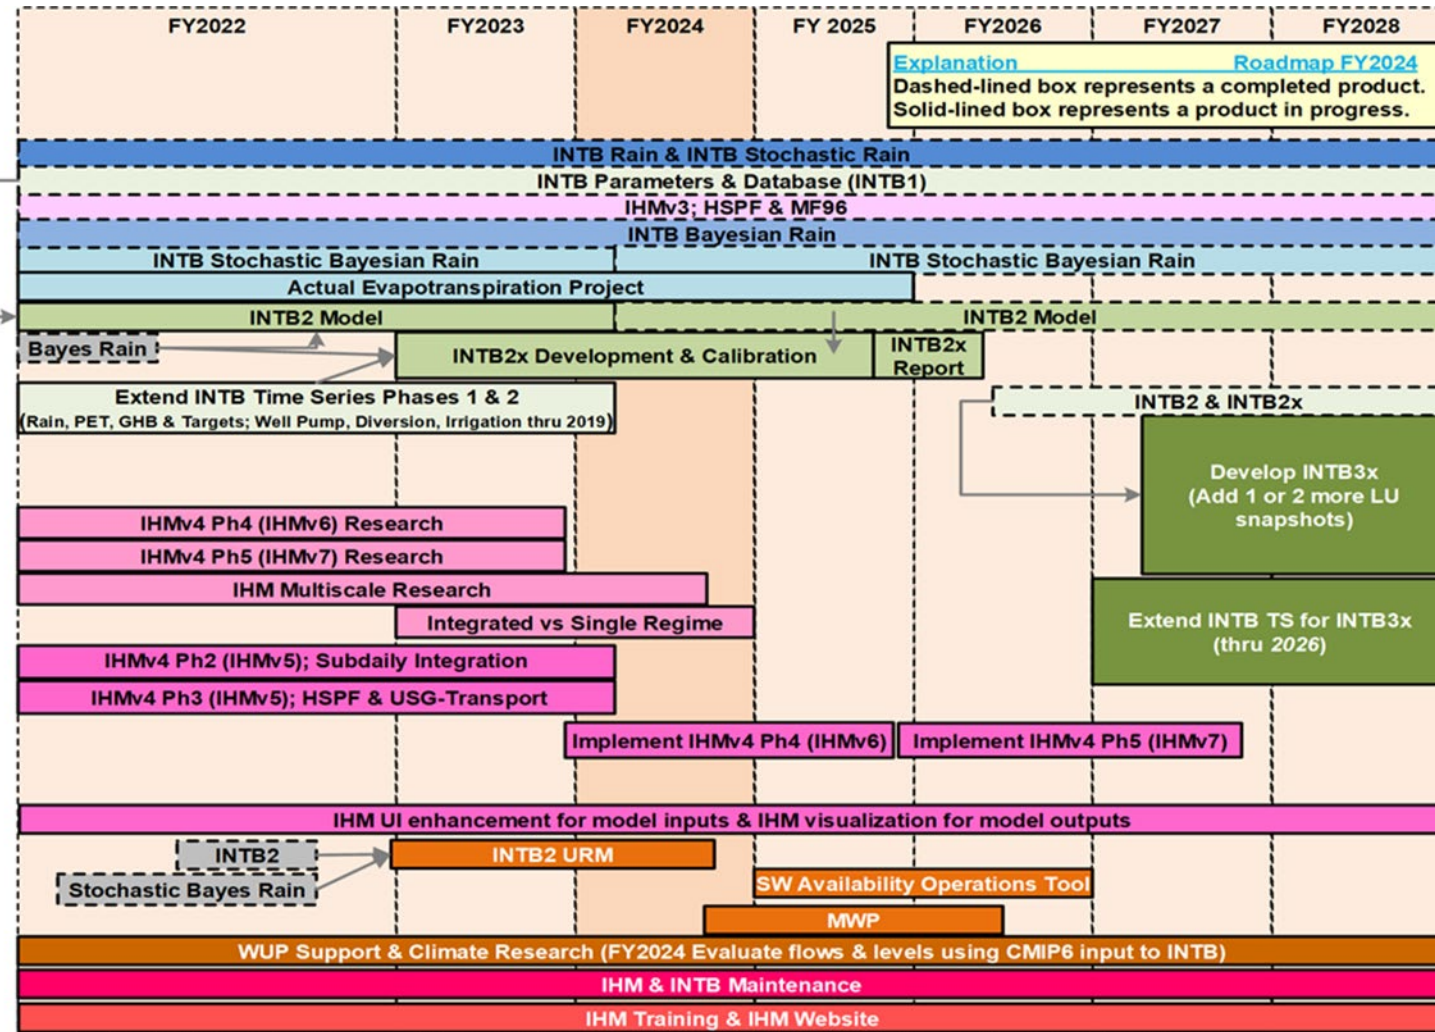

Sources of Uncertainty

Climate Input Data

Input & Target Data & Model Conceptualization

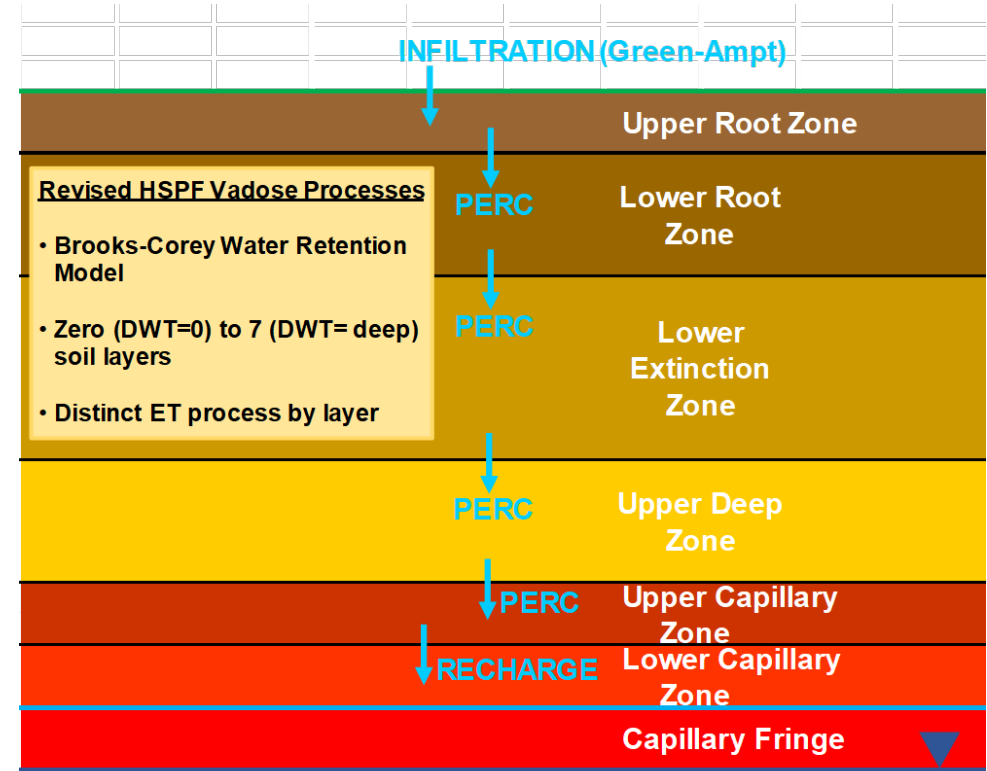

Model Code

IHM & INTB Models; Continuous Improvement Simulation Engine Examples

- Transition from MODFLOW-96 to USG-Transport
- HSPF & IHM integration revisions (details in presentation by Dr. Mark Ross, U. South Florida, this session)

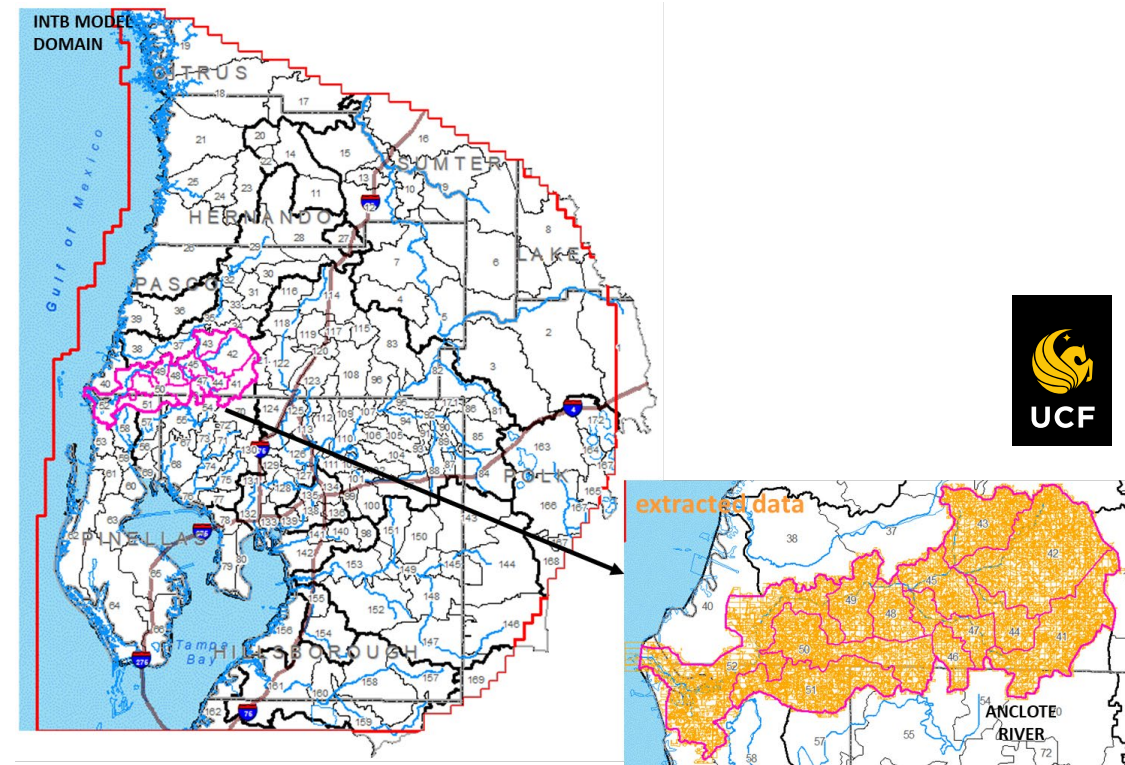

Revised HSPF Vadose Processes & Supporting IHM Revised Integration

IHM & INTB Models; Continuous Improvement Conceptualization & Discretization Examples

IHM Multiscale & Subdomain

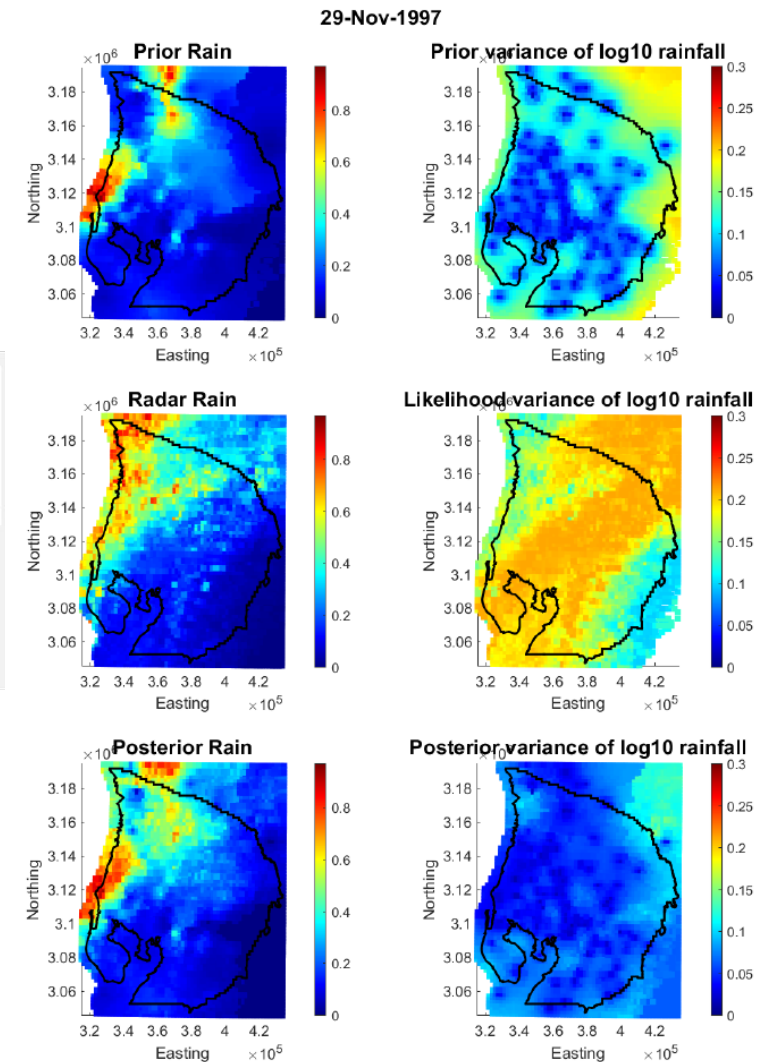

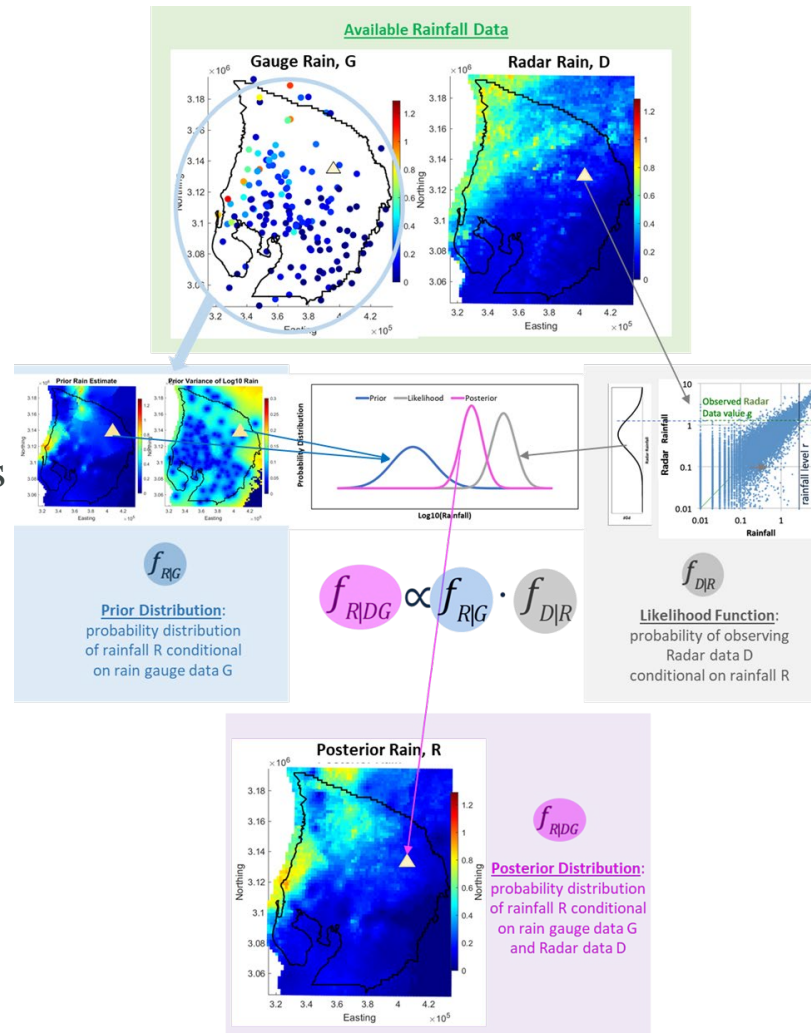

- Transition upland HRUs from landuse only to landuse & soil
- Disaggregate isolated waterbody (i.e., conditionally-connected) reach into wetland only and lake only reaches
- Apply unstructured MODFLOW grid to groundwater
- Landuse change (1995, 2010, others)
- IHM multiscale (details in presentation by Ms. Yu Zhang, U. Central Florida, this session)

IHM & INTB Models; Continuous Improvement

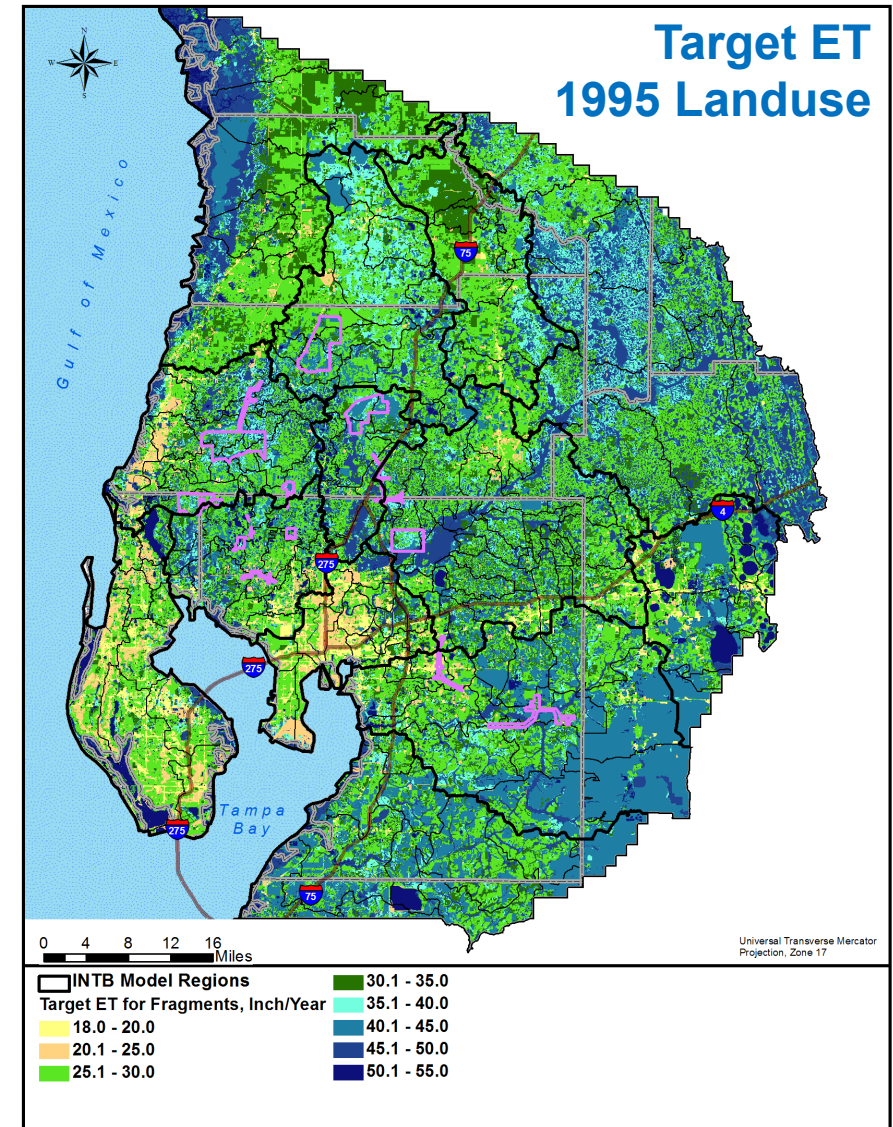

Input Data Examples

- 15-minute Bayesian radar rainfall (combine gauge & radar)
- Daily time series for pumping inputs
- Rigorous QC

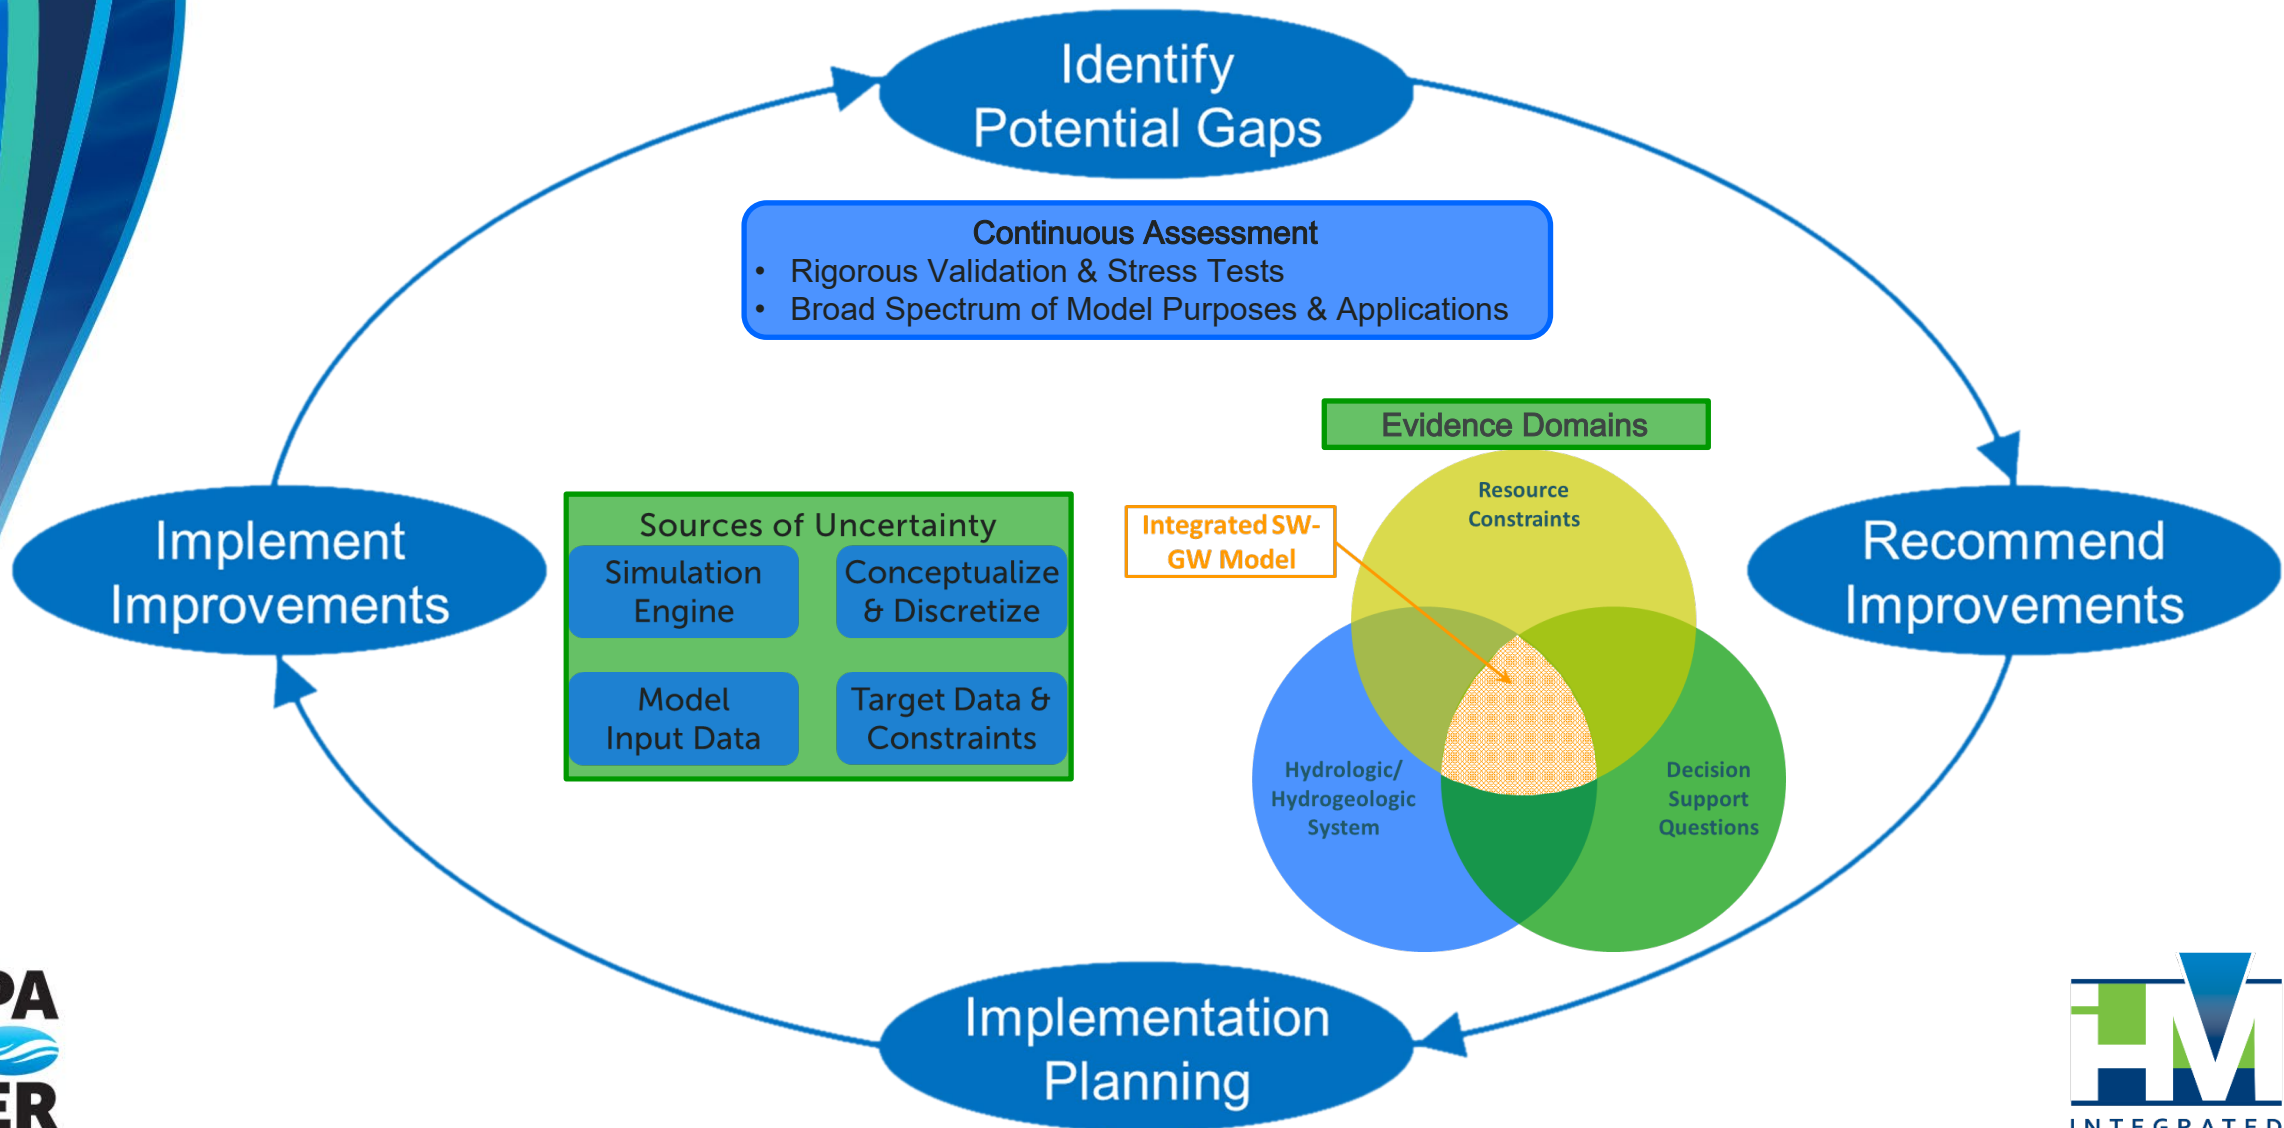

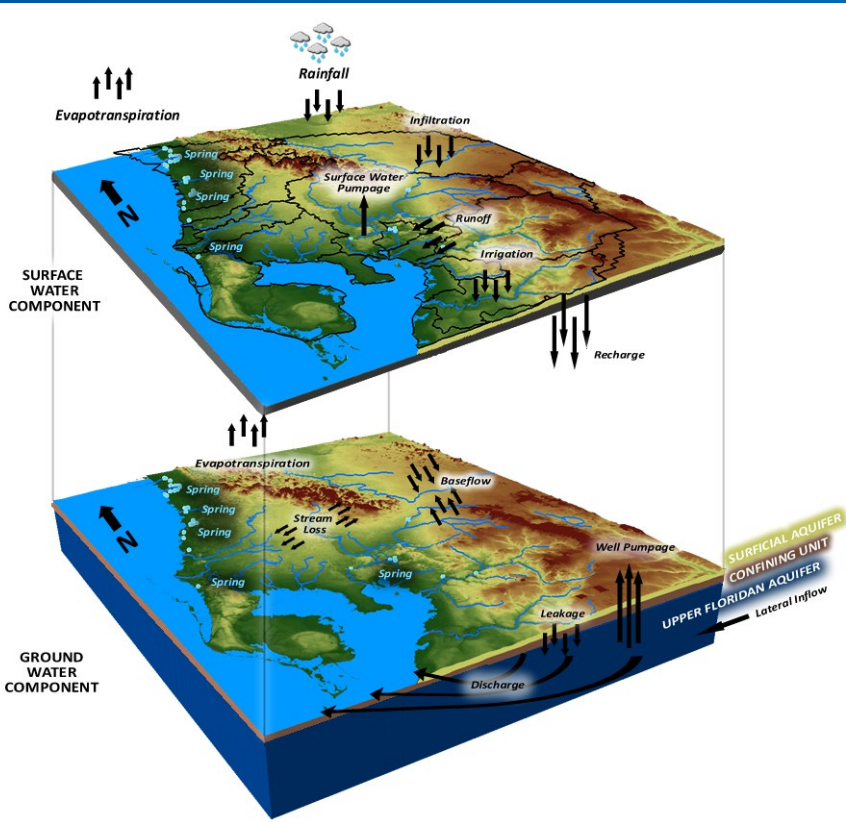

IHM & INTB Models; Continuous Improvement Target Data & Constraints Examples

- Daily time series
- Rigorous QC
- Objective weighting for calibration (type, statistical distribution, spatial distribution, standardized residuals)
- Target ET = function of landuse & DWT

Continuous Improvement for IHM & INTB Models Summary

Questions

[IHM website: IntegratedHydrologicModel.org](http://IntegratedHydrologicModel.org)

Integrated Hydrologic Model Continuous Improvement History

IHM Version or Developmental Phase	HSPF	MODFLOW	Database Technology	IHM Code Technology	Public Release	Date	Description
IHMv1	v12.0	MF-96	MS Access	VB.Net & VBA	NO	2001-2003	Original
IHMv2	v12.0	MF-96	MS Access	VB.Net & VBA	NO	2004-2009	Efficiencies, Code corrections & bugs
IHMv3	v12.2	MF-96	MS Access & SQL LocalDB	VB.Net & VBA	YES	2010-Current	Efficiencies, Code corrections & bugs, Peer Review 2018
IHMv4 Ph 1	v12.2	MF-96	SQL LocalDB	C#	NO	2018-Current	Technology upgrades
IHMv4 Ph 2	v12.2	MF-96	SQL LocalDB	C#	YES	2024	Subdaily IHM integration; Replace MF-96 with MF-USG & USG-Transport
IHMv4 Ph 3	v12.2	MF-USG & USG-Transport					
IHMv4 Ph 4	NEW	USG, USG-T	SQL LocalDB	C#	YES	~2026	¹ Improve IHM integration
IHMv4 Ph 5	NEW	USG, USG-T	SQL LocalDB	C#	YES	~2028	² Improve IHM integration

¹ *Improve IHM integration Ph 4*: Brooks-Corey soil moisture model, Green-Ampt infiltration, Vertical percolation, Transitions between infiltration- & saturation-excess, Improve ET partitioning between vadose and groundwater

² *Improve IHM integration Ph 5*: Improve timing and magnitude of recharge to groundwater, Integration uses static top-most active layer, Integration spans multiple MODFLOW layers, Reduce specific yield correction; Specific yield options

Integrated Northern Tampa Bay Model Continuous Improvement History

INTB Version	IHM Version	Landuse Year	Rainfall Sources	Basin Count	Land Segments / Reaches	Groundwater Grid	Date	Description
INTB1	IHMv3	1995	Gauged	172	815 / 409	Structured; Core area cell size 1320 ft	2009-Current	Original; Peer Review 2013
INTB2	IHMv4 Ph1, IHMv4 Ph3	1995	Bayesian: Merge Radar with Gauged	172	815 / 409	Structured; Core area cell size 1320 ft	2023	Reduce variance error; Recalibrate using Bayesian rain
INTB2x	IHMv4 Ph3	2010	Bayesian	172	815 / 409	Structured; Core area cell size 1320 ft	~2025	Landuse change
INTB3/3x	IHMv4 Ph5	TBD	Bayesian	>172	>815 / >409	Unstructured; Core area cell size <1320 ft	~2029	Reduce variance error; Change IHM code; Change conceptual model & reduce discretization scale; Recalibration
