¹Planning Program Manager, Tampa Bay Water, Clearwater FL, USA

²Planning & Decision Support Manager, Tampa Bay Water

³Chief Technical Officer, Tampa Bay Water

⁴Vice President, Hazen & Sawyer

⁵Principal Scientist, Hazen & Sawyer

This presentation will focus on Tampa Bay Water's assessment of climate change and coastal hazards impacts on potential future supply sources. During the update of its 2018 Long-term Master Water Plan document, several future water supply options were evaluated. As a part of those evaluations, an assessment was completed to characterize the vulnerability of existing and potential future water supply facilities to climate change and coastal hazards. The presentation will discuss the approach to vulnerability assessment as well as scores developed for existing and potential new supply projects that could be built to meet the growing drinking water needs of the Tampa Bay region.

PRESENTER BIO: Ivana Kajtezovic is a planning program manager with over a decade of experience in resource planning and project management.
